## Subject Description Form

Subject Code	AAE5203				
Subject Title	Aircraft Design and Certification				
Credit Value	3				
Level	5				
Pre-requisite/ Co-requisite/ Exclusion	Exclusion: ME578 Aircraft Design				
Objectives	1. To provide students with the key knowledge relevant to the process and principle of aircraft design, and the capacity to formulate the design requirements for an aircraft using modern engineering tools.				
	2. To provide students with the multi-disciplinary design optimization (MDO) knowledge to conduct aircraft system optimization from aerodynamics, propulsion, structure, stability, and performance perspectives.				
	3. To provide students with the knowledge about aircraft certification process and requirement.				
Intended Learning	Upon completion of the subject, students will be able to:				
Outcomes	a. understand fundamental concepts and constraints during an aircraft design process;				
	b. evaluate common aircraft configurations;				
	c. design and layout aircraft major components;				
	d. design and sizing aircraft that meets aerodynamic requirements;				
	e. optimize the aircraft design process by multi-disciplinary design optimization principles; and				
	f. understand airworthiness and aircraft certification process during an aircraft design.				

Subject Synopsis/ Indicative Syllabus	<b>Introduction to Aircraft Design:</b> Design process and basic aircraft requirements; Evolution of aircraft design and its performance: a brain history; Overview of aircraft design iteration cycle								
	<b>Modern Aircraft Configuration:</b> Advantages and drawbacks of conventional and modern configurations; Considerations for special aircraft; Primary considerations for the fuselage, wing, and tail design								
	Aerodynamic Consideration of Aircraft Design: Fundamentals of aerodynamic; Friction and pressure drag; Airfoil; Finite wings; Drag and lift; Dependence of lift and drag on the angle of attack; End effects of wingtips; Induced drag								
	<b>Sizing and Costing:</b> Internal layout; Structures and weight; Geometry constraints; Sizing equation; Weight fraction method; Weight and balance; Cost analysis; Elements of life-cycle cost; Cost-estimating methods; Operations and maintenance costs; Cost measures of merit								
	Main Components Selection and Design: Selection and design of main components such as fuselage, wing, tail and landing gear; Calculation and design of control surfaces such as aileron, elevator and rudder								
	<b>Multi-disciplinary Design Optimization (MDO):</b> uses optimization methods to solve design problems incorporating a number of disciplines								
	Aircraft certification and Airworthiness: Airworthiness requirements; Load factor determination; Aircraft safety; Airframe loads; Designing against fatigue; Prediction of aircraft fatigue life								
Teaching/Learning Methodology	Lectures are used to deliver the fundamental knowledge in relation to aircraft design. Tutorials and case study are used to illustrate the application of fundamental knowledge to practical situations.								
	Teaching/Learning     Outcomes       Methodology     Image: Comparison of the second

	Explanation of the a assessing the intended Overall Assessment: $0.5 \times \text{Continuo}$	learning outc	omes:					ods in		
	Examination is adopted to assess students on the overall understanding and the ability of applying the concepts. It is supplemented by continuous assessment including assignment, closed-book test and design project. The continuous assessment is aimed at enhancing the students' comprehension and assimilation of various topics of the syllabus. Design project is used to assess the students' capacities of self-learning and problem-solving and effective communication skill in English to fulfil the requirements of being aircraft design engineers.									
Student Study Effort Expected	Class contact:									
	Lecture						33 Hrs.			
	<ul> <li>Tutorial/case study</li> </ul>						6 Hrs.			
	Other student study effort:									
	<ul> <li>Course work and design project</li> </ul>						42 Hrs.			
	<ul> <li>Self-study</li> </ul>						25 Hrs.			
	Total student study effort						106 Hrs.
