PROGRAMME DOCUMENT FOR RESEARCH DEGREE PROGRAMMES

1.General Information

Programme Title	Doctor of Philosophy (PhD)/Master of Philosophy (MPhil) in Applied Physics
Programme Code:	88011 (full-time PhD), 88111 (part-time PhD), 88012 (full-time MPhil), 88112 (part-time MPhil)
Host Department	Department of Applied Physics
Medium of Instruction	English
Mode of Study	Full-time/Part-time (FT/PT)
Duration	4-Year PhD FT: 48 months normal, 72 months maximum PT: 96 months normal, 108 months maximum 3-Year PhD FT: 36 months normal, 60 months maximum PT: 72 months normal, 84 months maximum 2-Year MPhil FT: 24 months normal, 36 months maximum PT: 48 months normal, 60 months maximum
Requirement for Graduation	**Coursework Components** 4-Year PhD - At least 22 credits 3-Year PhD - At least 15 credits 2-Year MPhil - At least 9 credits **Research Components** A thesis and an oral examination on the thesis are required for both PhD and MPhil.
Final Award	M.Phil. or Ph.D. degree dependent on the enrollment

2.Programme Structure

Coursework components:	4-Year PhD (22 credits) Ethics: Research, Professional & Personal Perspectives (1 credit) Research Seminars III (4 credits) Practicum (2 credits) 5 Elective Subjects (15 credits) 3-Year PhD (15 credits) Ethics: Research, Professional & Personal Perspectives (1 credit) Research Seminars II (3 credits) Practicum (2 credits) 3 Elective Subjects (9 credits) 2-Year MPhil (9 credits) Ethics: Research, Professional & Personal Perspectives (1 credit) Research Seminars I (2 credits) 2 Elective Subjects (6 credits)
Research components:	Students are required to submit a thesis when their study is completed. The thesis should summarize the findings of the student's original and independent research. An oral examination on the submitted thesis is required for the student. The oral examination comprises the following parts where the sequence is to be determined by individual board of examiners (BoE): • A closed session in which the BoE holds a preliminary discussion in the student's absence. • A full oral presentation by the student to the BoE and others in attendance. • An open question period, involving the members of the BoE and others in attendance. Questions from the floor must be addressed through the Chair of the BoE, who will exercise discretion on the appropriateness of a question to be put forward to the examinee. • A session involving further discussion between the student and the BoE. • A closed session, in which the BoE assesses the thesis and the student's performance in the student's absence. • A closed session, in which the BoE informs the student of the BoE's recommendations.

3.The Rationale, Aims and Intended Learning Outcome of the Programme

University Overarching Aims of Research Degree Programmes	**Intended Learning Outcomes of M.Phil. and Ph.D. Programmes***
The research degree programmes are designed in such a way to enable the student to: a. acquire competence in research methods and scholarship; and b. display sustained independent effort and independent original thought.	Upon completion of the programmes, Ph.D. and M.Phil. students will be able to a1. solve theoretical or/and experimental problems of the related research field of studies with the previous accumulated knowledge and problem solving skills, a2. communicate clearly and effectively in English, excel in report writing and presentation skill, a3. collaborate smoothly with others in team work, demonstrate a sense of responsibility, accountability, leadership and team spirit, b1. develop capability of independent thinking, and b2. possess a desire for life-long learning and self-learning.
The PhD programmes should target to produce academics or industrial R & D professionals.	In addition to the above learning outcomes (a1-a3 and b1-b2), PhD students are also expected to be able to a4. discover new problems and formulate the problems to analyze, evaluate, synthesize and propose solutions to problems of a general nature with innovative/creative ideas where appropriate, a5. understand the knowledge of the research subjects extensively and thoroughly and publish their research findings as journal articles; and b3. develop a future career in their field of professions making use of their depth foundation built in the study as academics, researchers or industrial R&D professionals.

4.**The Curriculum**

M.Phil /Ph.D. in Applied Physics

Stage/ Semester	Subject Code	Subject	Credit	Compulsory/ Elective	Pre-requisite	Remarks
1/1	HTI6081	Ethics: Research, Professional & Personal Perspectives	1	C	None	
All	AP601	Research Seminars I	2	C	None	Students are recommended to complete one credit per year (for full-time students) or per two years (for part-time students) to fulfil the above- mentioned requirement, with an overall assessment grade of Pass and Fail. However, as deemed appropriate by the Chief Supervisor, they are allowed to complete at most two credits per year (for full-time students) or per two years (for part-time students to fulfil the research seminar credit requirement.
All	AP602	Research Seminars II	3	C	None	
All	AP603	Research Seminars III	4	C	None	
D	AP605	Practicum	2	C	None	Students are allowed to complete these two credits any time before they graduate. They can choose to complete these two credits in two different semesters or within the same semester, subject to the approval of the Chief Supervisor. Stipend recipients are allowed to fulfill part of their departmental training requirement through the completion of these compulsory training credits. For students who are required to undertake teaching supporting activities, they should be required to complete the training programmes orgainsed by the EDC and ELC before the commencement of any teaching supporting activities.
D	AP616	Smart Materials and Structures	3	E	None	
D	AP617	Advanced Instrumentation for	3	E	None	

D	AP618	Science and Technology of Micro- and Nano-	3	E	None	
D	AP619	Microfabrication Laboratory	3	E	None	
D	AP620	Atomistic View of Matter: Modeling &	3	E	None	Subject to final approval.
D	AP6911	**Guided study** in Physics of Low-Dimensional	3	E	None	For the number of guided study subjects that can be taken, no more than 10 credits for 4-year full-time PhD/8-year part-time PhD, No more than 6 credits for 3-year full-time PhD/6-year part-time PhD, and No more than 4 credits for 2-year full-time PhD/4-year part-time PhD, are allowed.
D	AP6912	**Guided Study** in Polymer Electronics	3	E	None	
D	AP6913	**Guided Study** in Optical Properties of Luminescent Materials	3	E	None	
D	AP6914	**Guided Study** in Ferroelectric Materials	3	E	None	
D	AP6915	**Guided Study** on Research Topics in Applied Physics	3	E	None	

D – dependent on the arrangement from department

Elective subjects (E) offered by other departments/universities

For PhD or MPhil students who find difficulty in taking the suggested elective courses from the curriculum, they could propose other available research postgraduate subjects offered by other departments/universities as their elective courses but subject to approval from DRC.

Curriculum Map

The curriculum map gives a holistic view of the programme to which each intended learning outcome will be taught and assessed in the programme (see "The Rationale, Aims and Intended Learning Outcome of the Programme" section). The corresponding curriculum map is given in the Appendix - **Attachment II**.

5.**Summary of the Subject Information**

Subject Code	Subject Name	Credit	Pre-requisite	Teaching Methods	Assessment Methods
HTI6081	Ethics: Research, Professional & Personal Perspectives	1	None	Lecture/seminar/ workshop	Report /presentation
AP601	Research Seminars I	2	None	seminar/ workshop/ conference	Attendance/ report
AP602	Research Seminars II	3	None	seminar/ workshop/ conference	Attendance/ report
AP603	Research Seminars III	4	None	seminar/ workshop/ conference	Attendance/ report
AP605	Practicum	2	None	Lecture and Hands-on experiments	SFQ, HoD/DoS/delegate review
AP616	Smart Materials and Structures	3	None	Lecture and Hands-on experiments	Continuous assessment and examination
AP617	Advanced Instrumentation for Materials Analysis	3	None	Lecture and Hands-on experiments	Continuous assessment and examination
AP618	Science and Technology of Micro- and Nano-systems	3	None	Lecture and Hands-on experiments	Continuous assessment and examination
AP619	Microfabrication Laboratory	3	None	Lecture and Hands-on experiments	Continuous assessment and Test
AP620*	Atomistic View of Matter: Modeling & Simulation	3	None	Lecture and Hands- on experiments	Continuous assessment and examination
AP6911	Guided study in Physics of Low-Dimensional Materials	3	None	Personal supervision and training	Report
AP6912	Guided Study in Polymer Electronics	3	None	Personal supervision and training	Report
AP6913	Guided Study in Optical Properties of Luminescent Materials	3	None	Personal supervision and training	Report
AP6914	Guided Study in Ferroelectric Materials	3	None	Personal supervision and training	Report
AP6915	Guided Study on Research Topics in Applied Physics	3	None	Personal supervision and training	Report

The detailed Subject Description Forms of all subjects are given in the Appendix.

*Remark: Subject to Final Approval.

6. Terms and Conditions

This Programme Document is subject to review and changes which the programme offering Faculty/Department/School can decide to make from time to time. Students will be informed of the changes as and when appropriate.

This Document should be read together with the "Regulations and Administrative Procedures for the Degrees of MPhil and PhD" and the "Research Student Handbook".

Programme Title: M.Phil. /Ph.D. in Applied Physics

Hosted by: Department of Applied Physics

Programme Outcomes	**Subject HTI6081**	**Seminar AP601 –603**	**Practicum AP605**	**Subjects AP616 –619**	**Subject AP620***	**Subjects AP6911 – 6915**	**Thesis**
1. To educate students a deep appreciation of ethical guidelines and codes of conduct.	√						
2. Capable to deliver oral presentation and written report to a very high international standard.		√	√			√	√
3. Demonstrate independent effort and original creativity.		√			√	√	√
4. Develop experimental skills through laboratory work experience.			√			√	
5. Study the advanced fabrication technology of novel nano- and micro- materials and the applications of systems. Advanced instruments for materials analysis are also included in the study.				√			
6. Broadband studies on some specific topics related to material science, optoelectronics materials and devices, and theory studies of materials and systems.					√	√	
7. In-depth analysis & study of the selected research topics.						√	√

*Remark: Subject to Final Approval.

Attachment III

The Hong Kong Polytechnic University

Subject Description Form

Subject Code	HTI6081
Subject Title	Ethics: Research, Professional & Personal Perspectives
Credit Value	1
Level	6
Pre-requisite / Co-requisite/ Exclusion	None
Objectives	To instill in students a deep appreciation of ethical guidelines and codes of conduct that they can apply in their research studies at PolyU and in their future professional and personal lives.
Intended Learning Outcomes	On successful completion of this subject, students will be able to: 1. Demonstrate knowledge and understanding of the need for ethical behavior and guiding codes of ethics in research and the professions. 2. Understand, discuss and apply ethical principles and codes across a range of disciplines and scenarios 3. Demonstrate awareness of current ethical issues and problems in relation to their own discipline and research area 4. Critically analyze and discuss scenarios cases of possible or actual ethical misconduct 5. Discuss how the guiding principles of ethics in research extend and apply to business, professional and personal codes of conduct and why this important to integrity and the well-being of business, the professions and our community. 6. Show a fundamental understanding of the issues of copyright, plagiarism and proper citation, and be able to apply this in their own work.
Subject Synopsis/ Indicative Syllabus	The need for ethics training and the meaning of ethical behavior in research: case studies, disasters and learning by the mistakes of others: • Philosophy and codes of ethics and their origins. • Culture, religion and the law – how these relate to ethical codes of conduct. • Obtaining ethical approval for a research project: procedures and processes. • Ethics in life science, humanities, education, business and industry: common issues, guiding principles, discipline specific scenarios • Ethics and human behavior: individual, professional and societal responsibilities. • Recent ethical issues affecting Hong Kong and society in general • Ethical use of information in thesis writing: understanding copyright, plagiarism and proper citation.

<tr><td>Total</td><td>100 %</td><td colspan="6"></td></tr>
</table>

Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes:

a. Discipline specific scenario/case study analysis will assess ability to identify and analyze ethical issues in the student’s own discipline and to present a coherent and detailed critique and plan on how these could be avoided or resolved (giving sources and written work accompanied by a Turn-it-in Report).

b. The group assignment will assess the student’s ability to identify, discuss and analyze ethical principles and issues from a wide perspective, and evaluate how individual, professions and societies benefit from following ethically acceptable behavior and practices.</td></tr>

The Hong Kong Polytechnic University

Subject Description Form

Subject Code	AP601
Subject Title	Research seminars I
Credit Value	2
Level	6
Pre-requisite / Co-requisite/ Exclusion	None
Objectives	The main objectives of this series of research seminars/workshops are to • provide an opportunity for our research students and research staff to present the latest results of their research achievement to their peers, • bring together research students, research staff, and professors within AP department to exchange and share knowledge and experience on various aspects of scientific research, • provide an in-depth analysis and study of specific research topics and update the knowledge of recent development in the related research communities, and to • invite local and oversea research scientists/professors to present their recent advancement and/or to explain their view in the future development of research areas of excellent. Hence, this series of research seminars/workshops will • bring together research students, research staff, academicians and experts to exchange and share knowledge and experience on various aspects of scientific research with the invited speakers, and • improve our connection and visibility to the research communities.
Intended Learning Outcomes	Upon completion of the research seminars /workshops, students will be able to: • achieve instant critical thinking – analysis and evaluation of assumption, claims, evidence, and arguments during the short period of discussion as well as raise questions. • improve information literacy – develop capability to distinguish different kinds of information sources, composing search strategies, and retrieving useful and relevant information. • refill communication skill – demonstrate the capability in written and spoken (English as a medium) to present and discuss research information within the scientific community and society. • establish networking – get to know researchers and scientists in their field of studies.
Subject Synopsis/ Indicative Syllabus	• Nanomaterials included 2D materials • Photonic Materials and Devices • Smart Materials and Devices • Theoretical and Computational Physics

<table>
<tr><td>Teaching/Learning Methodology</td><td>In order to stimulate and motivate the students' interest in the seminar/workshop participation, the hottest and latest advancement research topics will be presented. This will lead to the students' further exploration of potential novel research directions and studies as well as stimulate the students' creative thinking.</td></tr>

The Hong Kong Polytechnic University

Subject Description Form

Subject Code	AP605
Subject Title	Practicum
Credit Value	2
Level	6
Pre-requisite / Co-requisite/ Exclusion	All PhD students, irrespective of funding source and mode of study, **must** complete two training credits before graduation.
Objectives	The main objectives of departmental training are to • gain experience throughout the engagement in teaching/research supporting activities for 6 hours/week in any 13-week semester (for 1 credit), and • provide more teaching experience and training opportunity in order to widen the students' exposure for the development of their academic career.
Intended Learning Outcomes	Upon completion of the training, students will be able to: • carry out independent teaching and research duties. • improve communication skill and excel in teaching capability.
Subject Synopsis/ Indicative Syllabus	To be defined by the student's HoD/DoS or his/her delegate.
Teaching/Learning Methodology	Students who are required to undertake teaching supporting activities in their training credits will be required to complete a training programme on organized by the EDC as required by the Department/School. Students who are required to interact directly with students in English as a part of their duties in supporting teaching and learning must demonstrate their language competence to fulfill the intended duties to the satisfaction of the host department. All eligible students except those who are native English speakers will also be required to successfully complete a language training programme offered by the ELC before taking up any teaching supporting activities.

Attachment III

The Hong Kong Polytechnic University

Subject Description Form

Subject Code	AP616
Subject Title	Smart Materials and Structures
Credit Value	3
Level	6
Pre-requisite / Co-requisite/ Exclusion	None
Objectives	To introduce knowledge in material science including • the fundamentals of smart materials, devices and electronics, in particular those related to the development of smart structures and products; and • the skills, knowledge and motivation in the design, analysis and manufacturing of smart structures and products, to research students from different disciplines.
Intended Learning Outcomes	Upon completion of the subject, students will be able to: a) understand the physical principles underlying the behavior of smart materials; b) understand the engineering principles in smart sensor, actuator and transducer technologies; c) use principles of measurement, signal processing, drive and control techniques necessary to developing smart structures and products; and d) appreciate and suggest improvement on the design, analysis, manufacturing and application issues involved in integrating smart materials and devices with signal processing and control capabilities to engineering smart structures and products.
Subject Synopsis/ Indicative Syllabus	• Overview of Smart Materials, Structures and Products Technologies • Smart Materials (Physical Properties) • Smart Sensor, Actuator and Transducer Technologies • Measurement, Signal Processing, Drive and Control Techniques • Design, Analysis, Manufacturing and Applications of Engineering Smart Structures and Products
Teaching/Learning Methodology	In order to stimulate and motivate the students' interest in the study of material science and related topics, three experiments on piezoelectric, electrostrictive, magnetostrictive, magnetoelectric, magnetorheological fluid, electrorheological fluid, shape memory and fiber-optic sensor materials will be introduced in the studies. These proposed practical examples will demonstrate the importance of material science in our everyday life.

Assessment Methods in Alignment with Intended Learning Outcomes

Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)					
		a	b	c	d	e	
1. Examination	60	✓	✓	✓	✓		
2. Continuous assessment	40	✓	✓	✓	✓		
Total	100 %						

Students should have a) a basic understanding on the physical principles of smart materials, b) engineering principles of using smart materials in devices and applications, c) a basic understanding in measurement techniques and d) some knowledge to advance the engineering of smart structures and products – these are the intended learning outcomes.

Assignments will strengthen the students' basic knowledge and the analytical skill to solve the problems related to material science. Tests will review their understanding of the course and examination will accelerate their knowledge's understanding and improve their manipulation on problem solving skills. Hence, the proposed assessment methods are necessary to assess the intended learning outcomes (i.e., items a, b, c & d).

Student Study Effort Expected

Class contact:	
▪ Lectures	27 Hrs.
Other student study effort:	
▪ Self-study	81 Hrs.
▪ Laboratory	12 Hrs.
Total student study effort	120 Hrs.

Subject Description Form

Subject Code	AP617
Subject Title	Advanced Instrumentation for Materials Analysis
Credit Value	3
Level	6
Pre-requisite / Co-requisite/ Exclusion	None
Objectives	To introduce knowledge in advanced instrumentation for materials analysis to research students from different disciplines.
Intended Learning Outcomes	Upon completion of the subject, students will be able to: a) have an understanding on the principles and applications of a selected range of advanced instruments for materials analysis, b) understand the methodology of materials testing for quality assurance and failure analysis, and c) develop students' experimental skills through laboratory work experience.
Subject Synopsis/ Indicative Syllabus	• Overview of the principles and techniques in materials characterization and failure analysis; testing codes and standards. • Non-destructive testing methods: dye penetration, magnetic particles inspection, eddy currents, ultrasonics and radiography. • Mechanical and thermal techniques: dynamic mechanical analysis, thermomechanical analysis, and differential scanning calorimetry. • Microscopy: TEM, SEM, AFM, SAM and SLAM. • Other structural, chemical and surface analyses: XRD, FTIR, Raman spectroscopy, RHEED, RBS, EDX, LIMS and other novel techniques using plasma and post-ionization. • Hands-on experiments of using some of the available advanced instruments/facilities in our research centers.
Teaching/Learning Methodology	In order to stimulate and motivate the students' interest in the study of material science and related topics, hands-on experiments will be offered for students to gain experience on the characterization of the electrical and physical properties of some materials.

Assessment Methods in Alignment with Intended Learning Outcomes

Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)					
		a	b	c	d	e	
1. Examination	60	✓	✓	✓			
2. Continuous assessment	40	✓	✓	✓			
Total	100 %						

Students should have a) a basic understanding on the operation principles of some advanced instruments, b) gained knowledge in the quality assurance and failure analysis of materials, and c) developed experimental skills throughout the studies – these are the intended learning outcomes.

Assignments will strengthen the students' basic knowledge and the analytical skill to solve the problems related to different advanced measurement techniques for materials. Tests will review their understanding of the course and examination will accelerate their knowledge's understanding and improve their manipulation on problem solving. Hence, the proposed assessment methods are necessary to assess the intended learning outcomes (i.e., items a, b, & c).

Student Study Effort Expected

Class contact:	
▪ Lectures/Seminar	27 Hrs.
Other student study effort:	
▪ Self-study	81 Hrs.
▪ Laboratory	12 Hrs.
Total student study effort	120 Hrs.

The Hong Kong Polytechnic University

Subject Description Form

Subject Code	AP618
Subject Title	Science and Technology of Micro- and Nano- systems
Credit Value	3
Level	6
Pre-requisite / Co-requisite/ Exclusion	None
Objectives	To introduce knowledge in the field of micro- and nano- technologies to research students from different disciplines.
Intended Learning Outcomes	Upon completion of the subject, students will be able to: a) obtain a concept on the scope and recent development of the science and technology of micro- and nano-systems; b) gain the physical knowledge underlying the operation principles and design of micro- and nano-systems; c) gain the technical knowledge required for computer-aided design, fabrication, analysis and characterization of nano-structured materials, micro- and nano-scale devices; d) learn some typical or potentially applicable micro- and nano-systems at the frontier of the development of the field; e) gain hands-on experience on characterization and fabrication of some micro- and nano-systems.
Subject Synopsis/ Indicative Syllabus	• Overview of the science and technology of micro- and nano-systems • Physics in micro- and nano-systems: mechanics for micro- and nano-systems, fluid dynamics for micro- and nano- systems, heat conduction in micro- and nano- systems and quantum phenomena in nano-systems. • Micro- and nano-fabrication principles and techniques: basic micro- and nano-fabrication techniques, MEMS fabrication techniques, packaging, measurement techniques and computer-aided design. • Applications and devices : design of microaccelerometers and pressure sensors, microfluidic systems, biochemistry and medical applications, MEMS for information technology and nanoelectronics etc.
Teaching/Learning Methodology	In order to stimulate and motivate the students' interest in the study of material science and related topics, four experiments will be offered for the students to gain experience on nanoindentation, atomic force microscopy, carbon nanotube fabrication and operation of some MEMS devices. These proposed practical examples will demonstrate the

Subject Description Form

Please read the notes at the end of the table carefully before completing the form.

Subject Code	AP619
Subject Title	Microfabrication Laboratory
Credit Value	3
Level	6
Pre-requisite / Co-requisite/ Exclusion	Nil
Objectives	To make the students familiar with the microfabrication concepts, materials and methods that are typically used in a cleanroom.
Intended Learning Outcomes *(Note 1)*	Upon completion of the subject, students will be able to: a) understand the basic knowledge of a cleanroom, the working procedures, and the safety aspects; b) understand the principles behind the design and fabrication of semiconductor devices and the effect of processes on their performance; c) have a thorough understanding of the available fabrication technologies; and d) experimentally carry out a simple process recipe using the most common microfabrication techniques.
Subject Synopsis/ Indicative Syllabus *(Note 2)*	• Physical principles of IC fabrication processes; • Surface preparation; • Thermal processes; • Chemical and physical vapor depositions; • Resist coating and removal; • Mask fabrication and advanced lithography; • Etching techniques; • Process characterization;
Teaching/Learning Methodology *(Note 3)*	In order to stimulate and motivate the students' interest in the study of cleanroom microfabrication technologies, several cleanroom microfabrication experiments will be offered to the students for them to gain hands-on experience on the growth of SiO_2 thin film by thermal oxidation, CVD, PVD, lithography, patterning and etching. These proposed practical examples will demonstrate the importance of microfabrication in the forefront of modern microelectronics.

Assessment Methods in Alignment with Intended Learning Outcomes
(Note 4)

Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)			
		a	b	c	d
1. Written test	50	✓	✓	✓	✓
2. Continuous assessment	50	✓	✓	✓	
Total	100 %				

Students should a) have gained the basic knowledge of a cleanroom, the working procedures, and the safety aspects; b) have gained knowledge in the principles behind the design and fabrication of semiconductor devices and the effect of processes on their performance; c) have a thorough understanding of the available fabrication technologies; and d) be able to experimentally carry out a simple process recipe using the most common microfabrication techniques.

The continuous assessment includes the laboratory assignments, reports and presentation. Assignments will strengthen the students' basic knowledge and the analytical skill to solve the problems related to cleanroom microfabrication technologies as well as the cleanroom experimental skills on microfabrication. Tests will review their understanding of the course and examination will accelerate their knowledge understanding and improve their problem solving skills. Hence, the proposed assessment methods are necessary to assess the intended learning outcomes (i.e., items a, b, c, & d).

Student Study Effort Expected

The Hong Kong Polytechnic University

Subject Description Form

Please read the notes at the end of the table carefully before completing the form.

Subject Code	AP620 (*Subject to final approval)
Subject Title	Atomistic View of Matter: Modeling & Simulation
Credit Value	3
Level	6
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	This course will teach the physics that governs materials at the atomic scale and relate these processes to the macroscopic world.
Intended Learning Outcomes *(Note 1)*	Upon completion of the subject, students will be able to: a) design, perform and analyze computer experiments using electronic and atomistic simulation techniques appropriate for the problem at hand; b) extract materials properties from the simulations; c) recognize the approximations and estimate the level of accuracy to be expected from each modeling technique, and d) critically read the current scientific literature on computational modeling and simulation of materials.
Subject Synopsis/ Indicative Syllabus *(Note 2)*	**The quantum mechanics of bonding**: Atoms, molecules, molecular orbital theory, linear combination of atomic orbitals, variational principle **Electronic structure calculations**: Hartree, Hartree-Fock, post-Hartree-Fock, density functional theory and beyond, Koopmans theorem, modeling crystals **Molecular dynamics simulations**: Numerical integrators, neighbor list, spatial decomposition, interatomic potentials, parameterization, mean square displacement, auto-correlation, nudged elastic band **Classical and statistical mechanics**: thermodynamical ensembles, Boltzmann equation, equipartition energy, fluctuations, normal modes analysis, phonons, harmonic oscillator, specific heat, thermostats, barostats **Advanced techniques**: coarse grain simulations, atomistic electrochemistry, multi-scale modeling
Teaching/Learning Methodology *(Note 3)*	The course will make extensive use of cloud computing to enhance the learning using nanoHUB.org as well as its features for collaboration and publishing. Students will perform *ab initio* calculations using density functional theory and other advanced techniques as well as molecular dynamics simulations.

Lecture: The concepts will be presented in class including some illustrative examples and live simulations. Homework assignments will be provided periodically for the students to apply the concepts developed in class and to solve problems of current research.

Computer laboratory: During laboratory sessions, students will perform atomistic simulations individually or in groups to gain a deeper understanding of topics related to the lectures. These sessions aim at developing the students' intuition and critical thinking upon discussion and exchange of ideas in order to engage in the proposed activities.

Assessment Methods in Alignment with Intended Learning Outcomes

(Note 4)

Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)			
		a	b	c	d
(1) Homework	20	✓	✓	✓	
(2) Computer laboratory	20	✓	✓	✓	✓
(2) Final project	60	✓	✓	✓	✓
Total	100 %				

Continuous assessment includes participation in the computer laboratory sessions and homework assignments in order to check students' progress throughout the semester. Homework assignments will be graded as either complete or incomplete; in order to receive a passing grade students should not have more than one incomplete homework assignment. Computer labs will be graded.

The final project consists of a take-home exam and will be assigned during the second half of the semester. Students will utilize the knowledge gained in the class to design and perform atomistic simulations in order to tackle a problem of current research.

Student Study Effort Expected

Class contact:	
• Lecture	27 Hrs.
Other student study effort:	
• Self-study	81 Hrs.
• Computer Laboratory	12 Hrs.
Total student study effort	120 Hrs.

Note 1: Intended Learning Outcomes
Intended learning outcomes should state what students should be able to do or attain upon completion of the subject. Subject outcomes are expected to contribute to the attainment of the overall programme outcomes.

Note 2: Subject Synopsis/Indicative Syllabus
The syllabus should adequately address the intended learning outcomes. At the same time over-crowding of the syllabus should be avoided.

Note 3: Teaching/Learning Methodology
This section should include a brief description of the teaching and learning methods to be employed to facilitate learning, and a justification of how the methods are aligned with the intended learning outcomes of the subject.

Note 4: Assessment Method
This section should include the assessment method(s) to be used and its relative weighting, and indicate which of the subject intended learning outcomes that each method purports to assess. It should also provide a brief explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes.
