SHAPING FUTURE BIM TECHNOLOGIES

BIM is the future of Construction. To smoothly apply the technology in current workflow, BIM requires massive support from industry players and policy makers. What do they have on their minds today?

Advanced technologies rely heavily on software and hardware; which the platform is the best for our projects of various nature, design or size?

In this conference you will learn about:

How Hong Kong and China Governments shape their future BIM technologies with policy and standards.

Ways to accelerate architecture, engineering, and construction workflows with competent hardware and remote access.

Best practice in boosting project team's productivity in professional 3D models delivery with high performance servers.
