Appendix I Subject Description Forms

This Programme Requirement Document (PRD) is subject to review and changes which the programme offering Faculty/Department may decide to make from time to time. Students will be informed of the changes as and when appropriate.

PART A : INTRODUCTION

A 1 Preamble

A 1.1 PROGRAMME AIMS

The programme aims to provide the students with a sound education in electrical engineering. The programme is designed to produce engineering technologists/technicians who will be able to practice electrical engineering with competence in Hong Kong, China and the neighboring regions. The programme emphasizes on foundation level knowledge and its applications, practical skills, problem-solving ability, and team-work spirit.

This two years Higher Diploma (HD) programme aligns its intake with the graduates coming from the New Senior Secondary Curriculum (NSS). It also paves the way for graduates to further study for a professional qualification. Graduates will be able to obtain up to two years of exemption from study of a four-year Honors degree programme of a similar discipline.

A 2 General Information

A 2.1 PROGRAMME CODE AND TITLE

41373 - Higher Diploma in Electrical Engineering

A 2.2 DURATION AND MODE OF ATTENDANCE

Mode	Normal Duration
Full-time	2 years

A 2.3 FINAL AWARD

Higher Diploma in Electrical Engineering

A 2.4 IMPLEMENTATION DATE

Since September 2012

A 2.5 MINIMUM ENTRANCE REQUIREMENTS

For those applying on the basis of Hong Kong Diploma Secondary Education (HKDSE) results, the candidate should satisfy the University's General Entrance Requirements of Level 2 in five HKDSE subjects including English Language and Chinese Language. There is no compulsory subject requirement. Preferred elective subjects for the programme include:

- Mathematics;
- Extended modules of Mathematics;
- Information and Communication Technology;
- All single and combined Science subjects.

For those applying on the basis of A-Level results, the minimum requirements are:

- E in one A-Level subject OR E in two AS -Level subjects;

PLUS

- Satisfying the English Language requirement.

For those applying on the basis of a relevant local qualification, the specified qualifications are:

- Diploma in Electrical Engineering or equivalent; OR
- Higher Certificate in Electrical Engineering or equivalent.

A 3 Curriculum

A 3.1 SUBJECT CODE STRUCTURE

The time-tabled student hours for each subject and the type of activity (lecture [Lt], tutorial [Tu] and laboratory [Lab]) are given in the Table A3.1, A3.2 and A3.3. The abbreviations used in these tables are:

AMA	Applied Mathematics	AP	Applied Physics
CLC	Chinese Language Centre	EE	Electrical Engineering
ELC	English Language Centre	ENG	Engineering Faculty
IC	Industrial Centre		

Subjects are referenced by a Departmental prefix (e.g. EE corresponds to Electrical Engineering) followed by a reference number. Each subject is also categorised as non-deferrable (Non-Def) or deferrable (Def). In the reference numbers, the first digit (i.e. 1, 2, 3 or 4) indicates the level of the subject.

'Non-def' are those subjects which form the backbone of the vertical integration must be taken by every student in the prescribed semester, unless prevented from doing so due to non-compliance with prerequisites.

'Def' are those subjects which must be satisfactorily completed before the student becomes eligible for an award but the timing of the subject is determined by the student. Tables in Section A4 show the times (semester) in which these subjects are recommended to be taken if the programmes are to be completed in the minimum time.

A 3.2 GRADUATION REQUIREMENTS

To be eligible for a Higher Diploma award under the 2-year full-time Higher Diploma curriculum, a student must:

- (i) Complete successfully a minimum of 63 credits*;
- (ii) Earn a cumulative GPA of 1.70 or above at graduation;
- (iii) Satisfy 15 credits of HDGUR requirements which are distributed as follows:

(a) HD Language and Communication Requirements (HDLCR) [9 credits: 6 credits in English and 3 credits in Chinese]	9 credits
(b) Cluster Area Requirements (CAR) [6 credits: 3 credits should be in subjects designated as "China-related"]	6 credits
<i>Total = 15 credits</i>	

- (iii) Satisfy the residential requirement for at least 1/3 of the credits to be completed for the award; and
- (iv) Satisfy all requirements as defined and/or stipulated in the Programme Requirement Document and as specified by the University.

* This minimum depends on students' HKDSE result.

Level 0 and 1		Curriculum					Assessment Method

Table A3.3

A 3.3 CLUSTER AREA REQUIREMENTS (CAR)

To expand students' intellectual capacity beyond their disciplinary domain and to enable them to tackle professional and global issues from a multidisciplinary perspective, students are required to successfully complete two 3-credit subjects within the following four Cluster Areas:

- Human Nature, Relations and Development (HRD)
- Community, Organisation and Globalisation (COG)
- History, Culture and World Views (HCW)
- Science, Technology and Environment (STE)

A list of CAR subjects under each of the four Cluster Areas is available at: <https://www.polyu.edu.hk/ogur/GURSubjects/>

In addition, students are required to successfully complete a minimum of 3 credits in CAR subjects designated as "China-related". The purpose is to enable students to gain an increased understanding of China (e.g. its history, culture, and society, as well as emerging issues and challenges).

A list of approved CAR subjects for meeting the China Studies Requirements (CSR) is available at: <https://www.polyu.edu.hk/ogur/GURSubjects/>

A 4 Progression Pattern

Students are advised to follow the curriculum below:

Year 1 – Semester 1 (Total 15 credits plus 2 training credits)

Subject Code	Subject	Credits	Criteria for taking different subjects based on HKDSE results
AMA1110	Basic Mathematics I – Calculus and Probability & Statistics	3	Nil
AP10005	Physics I	3	Nil
CAR (China Related)	Cluster Area Requirement - China Related Subject (see section A3.3)	3	Nil
EE2002C	Circuit Analysis	3	Nil
ENG2002	Computer Programming	3	Nil
EE2101C	Engineering Communication and Fundamentals (120 hours throughout the year)	2 training credits (total 4 training credits)	Nil

Table A4.1

Year 1 – Semester 2 (Total 12 credits plus 2 training credits)

Subject Code	Subject	Credits	Criteria for taking different subjects based on HKDSE results
AP10006	Physics II	3	Nil
CLC1105C/P	University Chinese for Higher Diploma Students	3	Level 2 in HKDSE Chinese
CLC1104C/P	University Chinese		Level 3 or above in HKDSE Chinese
EE2003C	Electronics	3	Nil
EE2007C	Computer Systems Fundamentals	3	Nil
EE2101C	Engineering Communication and Fundamentals (120 hours throughout the year)	2 training credits (total 4 training credits)	Nil

Table A4.2

Year 1 – Summer (Total 6 credits plus 4 training credits)

Subject Code	Subject	Credits	Criteria for taking different subjects based on HKDSE results
AMA1120	Basic Mathematics II – Calculus and Linear Algebra	3	Nil
CAR	Cluster Area Requirement (see section A3.3)	3	Nil
EE2102C	IC Training I (EE) (120 hours in Summer)	4 training credits	Nil

Table A4.3

Year 2 – Semester 1 (Total 15 credits)

Subject Code	Subject	Credits	Criteria for taking different subjects based on HKDSE results
AMA2111	Mathematics I	3	Nil
EE2004C	Electrical Energy Systems Fundamentals	3	Nil
EE2009C	Group Project (½ subject)	3	Nil
EE3002C	Electromechanical Energy Conversion	3	Nil
ELC1007	University English for Higher Diploma Students I	3	Level 2 in HKDSE English should take ELC1007 & ELC1008
ELC1011	Practical English for University Studies		Level 3 in HKDSE English should take ELC1011 & ELC1013
ELC1013	English for University Studies		Level 4 or above in HKDSE English should take ELC1013 & 1 ELC elective (ELC2011/12/13/14)

Table A4.4

Year 2 – Semester 2 (Total 15 credits)

Subject Code	Subject	Credits	Criteria for taking different subjects based on HKDSE results
AMA2112	Mathematics II	3	Nil
EE2009C	Group Project (½ subject)	3	Nil
EE3003C	Power Electronics and Drives	3	Nil
EE3009C	Electrical Services in Buildings	3	Nil
ELC1008	University English for Higher Diploma Students II	3	Level 2 in HKDSE English should take ELC1007 & ELC1008
ELC1013	English for University Studies		Level 3 in HKDSE English should take ELC1011 & ELC1013
ELC2011/12/13/14 (either one of these subjects)	Advanced English Reading and Writing Skills/ Persuasive Communication/ English in Literature and Film/ Advanced English for University Studies		Level 4 or above in HKDSE English should take ELC1013 & 1 ELC elective (ELC2011/12/13/14)

Table A4.5

Additional Underpinning Subjects in Physics

Semester	Subject Code	Subject	Credits	Criteria for taking Additional Underpinning subjects - HKDSE student
Year 1 Semester 1	AP10001	Introduction to Physics	3	Have not attained Level 2 or above in HKDSE Physics or Combined Science (with a component in Physics)

Table A4.6

Total Credits Required for Graduation

The total study credits is ranging from 63 to 66 (plus 8 training credits) depending on the students' HKDSE results as students may be required to take an extra subject in Physics depending on their entry qualifications.

PART B : PHILOSOPHY AND OBJECTIVES

B 1 Programme Philosophy

The Higher Diploma (HD) programme aims to provide the necessary balance of theoretical studies and practical training to prepare students for a career as a higher technician or technician engineer in the field of electrical engineering. Graduates from the programme are expected to be able to assume technical positions to apply current technologies, make technical judgements, transfer and develop new technologies, and communicate clearly both in writing and orally at supervisory positions.

To achieve these aims, the programme is designed to consist of a balance of lectures/tutorials, laboratory work, practical training in the Industrial Centre and a group project. The curriculum includes studies in the main streams of electrical theory and is supported by mathematics, computing, electronics, mechanical engineering, English, Chinese and general studies.

HD and the Bachelor of Engineering programmes have a similar curriculum and syllabuses. This similarity of the HD programme and the Degree programme is specially adopted in the Department to facilitate teaching and student learning.

B 2 Programme Objectives

The programme objectives are as follows:

1. The programme aims to provide HD students with a sound education in electrical engineering.
2. The programme is designed to produce engineering technologist/technicians who will be able to practice electrical engineering and related disciplines.
3. The programme emphasizes on foundation level knowledge, application techniques, practical skills, problem solving ability, and team work spirit.
4. The programme also paves the way for graduates to further their studies for a higher professional qualification.

B 3 Programme Outcomes

To achieve the aims of producing higher technicians, the programme is designed to consist of a balance of lectures/tutorials, practical laboratory work, practical workshop training in the Industrial Centre and project. The curriculum includes studies in the mainstreams of electrical engineering supported by mathematics, computing, electronics, English, Chinese and general studies.

The approach will highlight the importance of practical application of electrical theory, with more emphasis being placed on applications. The workshop training and the laboratory training work will be an important part of the curriculum and reference is regularly made whenever possible to supplement the theoretical teaching in classrooms.

The University aspires to develop all its students as all-round graduates with professional competence, and has identified a set of highly valued graduate attributes as the learning goals for students. While many of these graduate attributes can be developed through the curricular activities of this programme, some (including interest in local and international affairs, interpersonal skills, sense of social and national responsibility, cultural appreciation, biliteracy and trilingualism, and entrepreneurship) will be primarily addressed through co-curricular activities offered by faculties, departments, and various teaching and learning support units of the University. Students are encouraged to make full use of such opportunities to develop these attributes.

Following the University's aim of producing all-rounded graduates with professional competence, the programme aims to develop students in the four main areas – to be a/an (i) competent professional, (ii) creative problem solver, (iii) effective communicator, and (iv) educated global citizen. Detail explanation of these areas is listed in Table B3.1.

Competent Professionals - A1, A2, A3, & A4	
A1 Professional Competence	Have a solid technical education in electrical engineering based on the understanding of its fundamentals and its current applications. Possess broad engineering knowledge to enable the graduates to adapt, to change, and to satisfy likely career diversions
A2 Practical Skills	Be able to apply modern experimental techniques and to be practical minded. Aware of technical and non-technical constraints
A3 Teamwork and Leadership	Possess social abilities including inter-personal/public relations, team work, and social consciousness.
A4 Global Outlook and Lifelong Learning	Possess an inquiring and innovative attitude thus encouraging the individual to acknowledge the developments in electrical engineering. To keep abreast of the developments in electrical engineering and an appreciation and the desire for lifelong learning.
B Creative Problem Solvers	
Creative Thinking and Problem Solving	Apply the fundamental principles to solve problems in the area of Electrical Engineering and related disciplines. Possess intellectual abilities including creative and critical thinking.
C Effective Communicators	
Biliteracy, Trilingualism, & Communication Skills	Language proficiency in English and Chinese to communicate clearly via graphic, numeric, verbal and written media.
D Educated Global Citizens	
Social Responsibilities	Have awareness and understanding of the ethical and social responsibilities of a technician engineer.

Table B3.1

The Programme Outcomes are in line with the Programme Objectives, and the corresponding mapping is shown in table B3.2.

		Programme Objectives			
		1	2	3	4
Programme Outcomes	A1	√	√		√
	A2		√	√	
	A3			√	
	A4				√
	B	√			
	C	√	√		
	D		√		

Table B3.2

The Subject Learning Outcomes are designed to be in alignment with the Programme Outcomes. The Subject Learning Outcomes are given in each subject and they can be found in the Subject Descriptions Forms in Appendix.

The programme and subject outcomes will be assessed in stages according to a Learning Outcomes Assessment Plan (LOAP) adopted by the Departmental Learning and Teaching Committee.

Relationship between Institutional Learning Outcomes and Intended Learning Outcomes (ILO) of the programme is shown in Table B3.3.

		Institutional Learning Outcomes					
		Competent Paraprofessional	Critical Thinker	Effective Communicator	Practical Problem Solver	Lifelong Learner	Ethical Citizen
Programme Outcomes	A1	√	√		√		
	A2	√	√		√		
	A3	√		√			√
	A4	√				√	
	B		√		√		
	C			√			
	D						√

Table B4.1

The above table illustrates how the subjects support the Programme Outcomes through the teaching activities, practice on the part of students, and measurements.

PART C : EDUCATIONAL AND ASSESSMENT METHODOLOGIES

C 1 Teaching and Learning

C 1.1 PHILOSOPHY

The philosophy has been to gradually introduce an approach in which the lecturers are encouraged to "teach" less and the students to learn more. The Department's teaching approach is being revised continuously so as to enhance the students' ability to find out and learn for themselves.

Teaching methods for replacing the out-dated 'chalk and talk' approach, or the 'monologue' lecturing style, with 'interactive teaching', are being further developed and promoted. It has indeed been our Department Policy to regard it as one of the top priorities, together with research. All of the classroom sessions are conducted as a combination of lecturing and tutoring, so that the active participation of the student is realized at all times. Other teaching aids such as interactive handouts, concept mapping, and computer aided learning software are also extensively utilized.

C 1.2 APPROACH USED

C 1.2.1 Teaching and Learning:

The approach is to wean students from rote-learning to self-study. The form of classroom teaching, however, is changing to become much more stimulating, with more student input expected. Tutorials are now integrated with the lectures, to give regular changes of activity within the lecture period, and thus keeping the students interested, alert, and participative.

The accepted philosophy is that 'if we perform the mental work for the learner, we reduce the learner's investment in learning, thereby reducing performance'. The student is encouraged and aided to adopt a 'deep' approach to study, which means that he/she should try to understand the underlying meaning rather than try to remember the words and the formulas, and to develop a critical awareness of the concepts being discussed and the relationship of these to other concepts. Emphasis is placed on the student's understanding of the basic principles and concepts. Students are not allowed to lose sight of the overall picture as a result of over-indulgence in mathematical details. Technical assumptions made in developing and applying basic theory are stressed. Emphasis is given to developing creativity and the ability to design. Students are not compelled to memorize large amounts of facts and formulas (except fundamental ones). The importance of problem solving in facilitating a full understanding of the topic is recognized. However, problem solving is not treated merely as a means of employing mathematical methods, but

also for applying concepts. Problem solving is implemented extensively in all aspects of the Programme. The students are encouraged to think around the subject matter.

Handout notes are used extensively throughout the Programme, but it is generally intended that these, in themselves, are incomplete. Students will need to fill out the handouts before, during and after the lectures before the content can be regarded as complete. In this way, and by requiring students to submit regular written reports, the students develop their ability to write clearly and concisely.

From the outset, students are encouraged and provoked into taking an active role in the learning process. The quality of a student's answers to questions, and the quality of the questions asked by the student, is evaluated to provide feedback throughout the Programme in each subject. Towards the end of the first year, and throughout the remainder of the Programme, it is the norm for students to give presentations of topics within the syllabus in front of their peers. This not only encourages them to adopt a self-study pattern, it also increases their self-confidence, their ability to argue from fundamentals and stresses their need to study the subject matter in depth to be able to answer questions from their peers.

C 1.2.2 Laboratory and Projects:

In the Programme, the laboratory work is integrated into each subject, as is the assessment for the laboratory work. It is the subject-lecturer's responsibility to ensure that the laboratory work is being taken seriously by the students and to stimulate them by gradually moving into open-ended experiments/tests and mini-projects with design elements included.

Students are required to preview their laboratory assignments. As with lectures, the process of generating a self-learning attitude is gradual. In the early part of the Programme, laboratory sheets have fairly detailed instructions and students preview the experiments by means of a 'theory' section in the experiment instruction sheet. As students' progress, less detailed information is presented and the student is expected to read around the experiment and contribute their own ideas as to how the experiment should be conducted.

Students are required to use log books for all experiments and to submit these and some formal laboratory reports for assessment.

Essentially each student is required to undertake a project. The projects are designed to be small group projects in which two or three students work on different aspects of a more ambitious project, while taking care that individual students are still assigned individual responsibility for their part of the work. This allows students to learn team work and it enables more advanced projects to be undertaken. As part of the supervision of the students' project and laboratory work, they are guided to gain skills such as the following:

1. Attention to detail and recognition that unless everything is done thoroughly, completely and correctly, their design, product or process may well be useless.
2. Ability to apply scientific methods to their work. This involves the discipline of keeping accurate and up-to-date records, to be constantly questioning both good and unexpected results, knowing how to go about experimental procedures, how to set up experiments and draw conclusions.
3. Recognition that they have to take personal responsibility for their work, to make sure that there are no mistakes, and not to assume that someone else will check their work.
4. Experience in working as part of a team, recognising that others can contribute necessary complementary skills and experience.

C 2 Industrial Centre (IC) Training

Students are required to undertake practical training at the Industrial Centre of the University, which is equivalent to 8 training credits. The training is scheduled partly during term time of Year One and partly in the summer at the end of Year One to give students an appreciation, with some practical involvement, of fitting, machining, electrical wiring, installation, and electronic/electrical equipment manufacturing. Students would gain theoretical knowledge which they can relate to practical applications. An appreciation of practical manufacturing processes is very important to enable the students to apply their theoretical knowledge to practical problems after they graduate from the Programme and start working in industry.

The following information with regard to IC training should be noted by all Higher Diploma Students:

- These training credits will not be counted towards meeting the credit requirement for FT status of students.
- These training credits are not to be counted towards the credit requirement for award, but students have to pass (i.e. obtaining Grade D or above) IC training in order to be considered for an award.
- IC training will be graded at any time when an assessment is made. Only **ONE** aggregate grade would be given for an academic year to sum up the performance of the student in IC training for that year.
- If assessment of a training subject completed in a particular academic year cannot be done in time for the grade to be reported in that particular year, the grade has to be reported during Semester One of the following academic year.
- The results of IC training would not be counted towards the Weighted GPA which is used for considering award classification.
- The results of IC training would be counted towards GPA calculation, which is computed at the end of every semester on the basis of the students' performance on all subjects taken since the start of their studies.

C 3 Electronic Student Feedback Questionnaire (eSFQ)

The Student Feedback Questionnaire (eSFQ) is a system that the University uses to collect feedback from students on teaching and learning. The eSFQ system is faculty-based, i.e., different faculties may have slightly different policies, procedures, and eSFQ forms. Furthermore, different General University Requirement (GUR) subjects will have slightly different eSFQ forms that are customised to suit the contexts and learning objectives of the respective subject. However, the purposes, processing, and intended uses of the eSFQ are essentially the same.

Under this system, students are invited to complete the eSFQ online/in class to provide feedback on their experience of studying a subject and/or the teaching of the subject teacher(s). This eSFQ exercise normally takes place in the last few weeks of the semester. However, for subjects that involve more than one teacher, it may take place earlier, when the teaching of the particular lecturer comes to an end. Some lecturers may also use the mid-semester eSFQ to solicit feedback from students so as to modify or adjust their teaching to improve learning for the remaining weeks of the semester.

The University values good teaching. We cherish the promotion of meaningful and relevant learning for our students, and believe that both teachers and students have a shared responsibility to enhance learning. Your feedback on teaching and learning will provide valuable information for us to assure the quality of our programmes, identify the strengths and weaknesses of the existing teaching and learning methodologies, and help us to improve the quality of teaching in the University.

PART D: ADMISSION, REGISTRATION AND ASSESSMENT

The admission, registration and assessment arrangements described below, are in accordance with the University policies and regulations for all 2-year full-time Sub-degree programmes with effect from the 2012/13 cohort of intakes.

D 1 Admission

Students are normally admitted into the programme via the Joint University Programmes Admission System (JUPAS) on a yearly basis. Non-JUPAS applicants are also considered on their academic merits, as well as non-academic achievements.

D 2 Concurrent Enrolment

Students are not permitted to enroll concurrently on two full-time programmes, whether or not one of the programmes is offered by another institution.

Except for programmes which do not lead to any formal award, students are not allowed to enrol concurrently on a full-time programme and a part-time programme, or on more than one part-time programmes, including those offered by another institution, without permission from the Head(s) of Department concerned.

D 3 Normal duration for Completion of the Programme (applicable to students admitted in or after 2020/21)

Students should complete the programme within the normal duration of the programme as specified in the Programme Requirement Document. Those who exceed the normal duration of the programme will be de-registered from the programme unless prior approval has been obtained from relevant authorities. The study period of a student shall exclude deferment granted for justifiable reasons, and the semester(s) when the student has been approved to undertake internship. Any semester in which the students are allowed to take zero subject will be counted towards their total period of registration.

Students who have been registered for the normal duration of the programme may request extension of their studies for up to one year with the approval of the relevant Heads of Department/Deans of Independent School. Applications for extension of study period beyond one year and up to two years will require the approval from Faculty/School Board Chairman.

Students who have exceeded the normal duration of the programme for more than two years and have been de-registered can submit an appeal to the Academic Appeals Committee to request further extension. If the appeal fails, the student shall be deregistered.

D 4 Subject Registration and Withdrawal

In addition to programme registration, students need to register for the subjects at specified periods prior to the commencement of the semester. An add/drop period will also be scheduled for each semester/term. Students may apply for withdrawal of their registration on a subject after the add/drop period and before the commencement of the examination period if they have a genuine need to do so. The application should be made to the relevant programme offering Department and will require the approval of both the subject teacher and the host Department Programme Leader concerned. Applications submitted after the commencement of the examination period will not be considered. For approved applications of subject withdrawal, the tuition fee paid for the subject will be forfeited and the withdrawal status of the subject will be shown in the assessment result notification and transcript of studies, but will not be counted in the calculation of the GPA.

The pre-requisite requirements of a subject must have been fulfilled before a student registers for that subject. However, the subject offering Department has the discretion to waive the pre-requisite requirements of a subject, if deemed appropriate. If the pre-requisite subject concerned forms part of the requirements for award, the subject has to be passed in order to satisfy the graduation requirements for the programme concerned, despite the waiving of the pre-requisite during the subject registration process.

Subject to the maximum study load of 21 credits per semester and the availability of study places, students are allowed to take additional subjects on top of the prescribed credit requirement for award before they become eligible for graduation. Students will be allowed to take additional subjects for broadening purpose, after they fulfil the graduation requirements and for the following semester. However, they will still be subject to the maximum study load of 21 credits per semester and the availability of places in the subjects concerned, and their enrolment will be arranged as subject-based students only and be subject to the rules on 'Admission of Subject-based Students', except that graduates from UGC-funded programmes will not be restricted to taking only subjects from a self-financed programme.

D 5 Study Load

For students following the progression pattern specified for their programme, they have to take the number of credits and subjects, as specified in the Programme Requirement Document, for each semester. Students cannot drop those subjects assigned by the Department unless prior approval has been given by the Department.

The normal study load is 15 credits in a semester for full-time study. The maximum study load to be taken by a student in a semester is 21 credits, unless exceptional approval is given by the Head of Department. For such cases, students should be reminded that the study load approved should not be taken as grounds for academic appeal.

To help improve the academic performance of students on academic probation, these students will be required to take a reduced study load in the following semester (Summer Term excluded). The maximum number of credits to be taken by the students varies according to the policies of individual Departments and will be subject to the approval of the authorities concerned.

Students are not allowed to take zero subject in any semester, including the mandatory summer term as required. Unless they have obtained prior approval from the Department; otherwise they will be classified as having unofficially withdrawn from their programme. Students who have been approved for zero subject enrolment (i.e. taking zero subject in a semester) are allowed to retain their student status and continue using campus facilities and library facilities. Any semester in which the students are allowed to take zero subject will nevertheless be counted towards the total period of registration (or maximum period of registration for students admitted in or before 2019/20).

Students who have obtained approval to pace their studies and students on programmes without any specified progression pattern who wish to take more than the normal load of 15 credits in a semester should seek advice from the Department concerned before the selection of subjects.

D 6 Subject Exemption

Students may be exempted from taking any specified subjects, including mandatory General University Requirements (GUR) subjects, if they have successfully completed similar subjects previously in another programme or have demonstrated the level of proficiency/ability to the satisfaction of the subject offering Department. Subject exemption is normally decided by the subject offering Department. If students are exempted from taking a specified subject, the credits associated with the exempted subject will not be counted towards meeting the award requirements (except for exemptions granted at admission stage). It will therefore be necessary for the students to consult the programme offering Department and take another subject in order to satisfy the credit requirement for the award.

D 7 Credit Transfer

Students may be given credits for recognised previous studies including mandatory General University Requirements (GUR) subjects, and the credits will be counted towards meeting the requirements for award. Transferred credits may not normally be counted towards more than one award. The granting of credit transfer is a matter of academic judgment.

Credit transfer may be done with or without the grade being carried over; the former should normally be used when the credits were gained from PolyU. Credit transfer with the grade being carried over may be granted for subjects taken from outside the University, if deemed appropriate, and with due consideration to the academic equivalence of the subjects concerned and the comparability of the grading systems adopted by the University and the other approved institutions. Subject credit transfer is normally decided by the subject offering Department. The validity period of credits previously earned, is 8 years after the year of attainment.

Normally, not more than 50% of the credit requirement for award may be transferable from approved institutions outside the University. For transfer of credits from programmes offered by PolyU, normally not more than 67% of the credit requirement for award can be transferred. In cases where both types of credits are being transferred (i.e. from programmes offered by PolyU and from approved institutions outside the University), not more than 50% of the credit requirement for award may be transferred.

All credit transfers approved will take effect only in the semester for which they are approved. A student who applies for transfer of credits during the re-enrolment or the add/drop period of a particular semester will only be eligible for graduation at the end of that semester, even if the granting of credit transfer will immediately enable the student to satisfy the credit requirement for the award.

For credit transfer of retaken subjects, the grade attained in the last attempt should be taken in the case of credit transfer with grade being carried over. Students applying for credit transfer for a subject taken in other institutions are required to declare that the subject grade used for claiming credit transfer was attained in the last attempt of the subject in their previous studies. If a student fails in the last attempt of a retaken subject, no credit transfer should be granted, despite the fact that the student may have attained a pass grade for the subject in the earlier attempts.

Students should not be granted credit transfer for a subject which they have attempted and failed in their current study unless the subject was taken by the student as an exchange-out student in his/her current programme.

D 8 Deferment of Study

Students may apply for deferment of study if they have a genuine need to do so such as illness or posting to work outside Hong Kong. Approval from the Department offering the programme is required. The deferment period will not be counted towards the total period of registration (or maximum period of registration for students admitted in or before 2019/20).

Application for deferment of study from students who have not yet completed the first year of a full-time programme will only be considered in exceptional.

Where the period of deferment of study begins during a stage for which fees have been paid, no refund of such fees will be made.

Students who have been approved for deferment are not entitled to enjoy any campus facilities during the deferment period.

D 9 General Assessment Regulations

The University's General Assessment Regulations (GAR) applies to this Programme. The specific assessment regulations are set out here, having been developed within the framework of the GAR.

Students' progress by credit accumulation, i.e. credits earned by passing individual subjects can be accumulated and counted towards the final award.

(a) Subject Level

A 'level' in a programme indicates the intellectual demand placed upon students and may characterize each subject with respect to its recommended sequencing within that programme. Upper level subjects should normally build on lower level subjects. Pre-requisite requirements, if any, must therefore be spelt out on a subject basis.

A 'subject' is defined as a discrete section of the programme which is assigned a separate assessment. A list of subjects, together with their level and weightings, shall be published in the Programme Requirement Document.

(b) Language of assessment

The language of assessment for all programmes/subjects shall be English, unless approval is given for it to be otherwise.

D 10 Principles of Assessment

Assessment *of* learning and assessment *for* learning are both important for assuring the quality of student learning. Assessment *of* learning is to evaluate whether students have achieved the intended learning outcomes of the subjects that they have taken and have attained the overall learning outcomes of the academic programme at the end of their study at a standard appropriate to the award. Appropriate methods of assessment that align with the intended learning outcomes should be designed for this purpose. The assessment methods will also enable the teacher to differentiate students' different levels of performance within the subject. Assessment *for* learning is to engage students in productive learning activities through purposefully designed assessment tasks.

Assessment will also serve as feedback to students. The assessment criteria and standards should be made explicit to students before the start of the assessment to facilitate student learning, and feedback provided should link to the criteria and standards. Timely feedback should be provided to students so that they are aware of their progress and attainment for the purpose of improvement.

The ultimate authority in the University for the confirmation of academic decisions is the Senate, but for practical reasons, the Senate has delegated to the Faculty/School Boards the authority to confirm the decisions of Boards of Examiners provided these are made within the framework of the General Assessment Regulations. Recommendations from Board of Examiners which fall outside these Regulations shall be ratified by the Academic Planning and Regulations Committee (APRC) and reported to the Senate as necessary.

D 11 Assessment Methods

Students' performance in a subject can be assessed by continuous assessment and/or examinations, at the discretion of the individual subject offering Department. Where both continuous assessment and examinations are used, the weighting of each in the overall subject grade shall be clearly stated in the Programme Requirement Document. The subject offering Department can decide whether students are required to pass both the continuous assessment and examination components, or either component only, in order to obtain a subject pass, but this requirement (to pass both, or either, components) shall be specified in the Programme Requirement Document. Learning outcome should be assessed by continuous assessment and/or examination appropriately, in line with the outcome-based approach.

Continuous assessment may include tests, assignments, projects, laboratory work, field exercises, presentations and other forms of classroom participation. Continuous Assessment assignments which involve group work should nevertheless include some individual components therein. The contribution made by each student in continuous assessment involving a group effort shall be determined and assessed separately, and this can result in different grades being awarded to students in the same group.

Assessment methods and parameters of subjects shall be determined by the subject offering Department.

At the beginning of each semester, the subject teacher should inform students of the details of the methods of assessments to be used, within the assessment framework as specified in the Programme Requirement Document.

D 12 Progression/Academic Probation/Deregistration

The Board of Examiners shall, at the end of each semester (except for Summer Term unless there are students who are eligible to graduate after completion of Summer Term subjects or the Summer Term study is mandatory for the programme), determine whether each student is

- (a) eligible for progression towards an award; or
- (b) eligible for an award; or
- (c) required to be de-registered from the programme.

When a student has a Grade Point Average (GPA) lower than 1.70, he/she will be put on academic probation in the following semester. If a student is able to pull his/her GPA up to 1.70 or above at the end of the semester, the status of "academic probation" will be lifted. The status of "academic probation" will be reflected in the assessment result notification but not in the transcript of studies.

A student will have 'progressing' status unless he/she falls within any one of the following categories which shall be regarded as grounds for deregistration from the programme:

- (a) the student has exceeded the maximum period of registration for that programme, as specified in the Programme Requirement Document (applicable to students admitted in or before 2019/20);
or
- (b) the student has reached the final year of the normal period of registration for that programme, as specified in the Programme Requirement Document, unless approval has been given for extension (applicable to students admitted in or after 2020/21); or
- (c) the student has reached the maximum number of retakes allowed for a failed compulsory subject;
or
- (d) the student's GPA is lower than 1.70 for two consecutive semesters and his/her Semester GPA in the second semester is also lower than 1.70; or
- (e) the student's GPA is lower than 1.70 for three consecutive semesters.

When a student falls within any of the categories as stipulated above, except for category (b) with approval for extension, the Board of Examiners shall de-register the student from the programme without exception.

A student may be de-registered from the programme enrolled before the time frame specified at (d) or (e) above if his/her academic performance is poor to the extent that the Board of Examiners deems that his/her chance of attaining a GPA of 1.70 at the end of the programme is slim or impossible.

The progression of students to the following academic year will not be affected by the GPA obtained in the Summer Term, unless Summer Term study is mandatory for all students of the programme and constitutes a requirement for graduation.

If the student is not satisfied with the de-registration decision of the Board of Examiners, he/she can lodge an appeal. All such appeal cases will be referred directly to Academic Appeals Committee (AAC) for final decision. Views of Faculties/Schools/Departments will be sought and made available to AAC for reference.

D 13 Retaking of Subjects

Students may only retake a subject which they have failed (i.e. Grade F or S or U). Retaking of subjects is with the condition that the maximum study load of 21 credits per semester is not exceeded.

The number of retakes of a subject should be restricted to two, i.e. a maximum of three attempts for each subject is allowed.

In cases where a student takes another subject to replace a failed elective subject, the fail grade will be taken into account in the calculation of the GPA, despite the passing of the replacement subject. Likewise, students who fail a Cluster Area Requirement (CAR) subject may need to take another subject from the same Cluster Area in order to fulfill this part of the GUR, since the original CAR subject may not be offered; in such cases, the fail grade for the first CAR subject will be taken into account in the calculation of the GPA, despite the passing of the second CAR subject.*

Students need to submit a request to the Faculty/School Board for the second retake of a failed subject.

Students who have failed a compulsory subject after two retakes and have been de-registered can submit an appeal to the Academic Appeals Committee (AAC) for a third chance of retaking the subject.

In case AAC does not approve further retakes of a failed compulsory subject or the taking of an equivalent subject with special approval from the Faculty, the student concerned would be de-registered and the decision of the AAC shall be final within the University.

* In these circumstances when students do not have a choice to retake a failed subject, such as when the failed subject has been phased out, a 'tie-subject' arrangement can be made with the approval of the Faculty/School Board. Under the arrangement, another appropriate subject can be taken as equivalent to the subject which is not offered. Upon passing the equivalent subject, the fail grade of the original subject will be replaced by the latest grade of the retake subject and the failure grade of the original subject will not be taken into account in the calculation of the GPA.

D 14 Absence from an Assessment Component

If a student is unable to complete all the assessment components of a subject, due to illness or other circumstances which are beyond his/her control and considered by the subject offering Department as legitimate, the Department will determine whether the student will have to complete a late assessment and, if so, by what means. This late assessment shall take place at the earliest opportunity, and normally before the commencement of the following academic year (except that for Summer Term, which may take place within 3 weeks after the finalisation of Summer Term results). If the late assessment cannot be completed before the commencement of the following academic year, the Faculty/School Board Chairman shall decide on an appropriate time for completion of the late assessment.

The student concerned is required to submit his/her application for late assessment in writing to the Head of Department offering the subject, within five working days from the date of the examination, together with any supporting documents. Approval of applications for late assessment and the means for such late assessments shall be given by the Head of Department offering the subject or the subject teacher concerned, in consultation with the Programme Leader.

D 15 Assessment to be completed

For cases where students fail marginally in one of the components within a subject, the BoE can defer making a decision until the students concerned have completed the necessary remedial work to the satisfaction of the subject examiner(s). The remedial work must not take the form of re-examination.

D 16 Aegrotat Award

If a student is unable to complete the requirements of the programme in question for the award due to very serious illness, or other very special circumstances which are beyond his/her control, and considered by the Board of Examiners as legitimate, the Faculty/School Board will determine whether the student will be granted an aegrotat award. Aegrotat award will be granted under very exceptional circumstances.

A student who has been offered an aegrotat award shall have the right to opt either to accept such an award, or request to be assessed on another occasion to be stipulated by the Board of Examiners; the student's exercise of this option shall be irrevocable.

The acceptance of an aegrotat award by a student shall disqualify him/her from any subsequent assessment for the same award.

An aegrotat award shall normally not be classified, and the award parchment shall not state that it is an aegrotat award. However, the Board of Examiners may determine whether the award should be classified, provided that they have adequate information on the students' academic performance.

D 17 Grading

Assessment grades shall be awarded on a criterion-referenced basis. A student's overall performance in a subject shall be graded as follows from 2020/21 onwards*:

<i>Subject grade</i>	<i>Short description</i>	<i>Elaboration on subject grading description</i>
A+ A A-	Excellent	Demonstrates excellent achievement of intended subject learning outcomes by being able to skillfully use concepts and solve complex problems. Shows evidence of innovative and critical thinking in unfamiliar situations, and is able to express the synthesis or application of ideas in a logical and comprehensive manner.
B+ B B-	Good	Demonstrates good achievement of intended subject learning outcomes by being able to use appropriate concepts and solve problems. Shows the ability to analyse issues critically and make well-grounded judgements in familiar or standard situations, and is able to express the synthesis or application of ideas in a logical and comprehensive manner.
C+ C C-	Satisfactory	Demonstrates satisfactory achievement of intended subject learning outcomes by being able to solve relatively simple problems. Shows some capacity for analysis and making judgements in a variety of familiar and standard situations, and is able to express the synthesis or application of ideas in a manner that is generally logical but fragmented.
D+ D	Pass	Demonstrates marginal achievement of intended subject learning outcomes by being able to solve relatively simple problems. Can make basic comparisons, connections and judgments and express the ideas learnt in the subject, though there are frequent breakdowns in logic and clarity.
F	Fail	Demonstrates inadequate achievement of intended subject learning outcomes through a lack of knowledge and/or understanding of the subject matter. Evidence of analysis is often irrelevant or incomplete.

'F' is a subject failure grade, whilst all others ('D' to 'A+') are subject passing grades. No credit will be earned if a subject is failed.

Indicative descriptors for modifier grades

Main Grade (solid)	The student generally performed at this level, indicating mastery of the subject intended learning outcomes at this level.
+ (exemplary)	The student consistently performed at this level and exceeded the expectations of this level in some regards, but not enough to claim mastery at the next level.
- (marginal)	The student basically performed at this level, but the performance was inconsistent or fell slightly short in some regards.

Note: The above indicative descriptors for modifier grades are not applicable to the pass grades D and D+

* For the short description of subject grades and elaboration on subject grading descriptions for 2019/20 and before, please refer to the previous editions of this document.

A numeral grade point is assigned to each subject grade.

The grade points assigned to subject grades attained by students from 2020/21 are as follows:

<i>Grade</i>	<i>Grade Point for grades attained from 2020/21</i>
A+	4.3
A	4.0
A-	3.7
B+	3.3
B	3.0
B-	2.7
C+	2.3
C	2.0
C-	1.7
D+	1.3
D	1.0
F	0.0

The grade points assigned to subject grades attained by students before 2020/21 are as follows:

<i>Grade</i>	<i>Grade Point for grades attained before 2020/21</i>
A+	4.5
A	4.0
B+	3.5
B	3.0
C+	2.5
C	2.0
D+	1.5
D	1.0
F	0.0

At the end of each semester/term, a Grade Point Average (GPA) will be computed as follows, and based on the grade point of all the subjects:

$$\text{GPA} = \frac{\sum_{n=1}^N \text{Subject Grade Point}_n \times \text{Subject Credit Value}_n}{\sum_{n=1}^N \text{Subject Credit Value}_n}$$

where N = number of all subjects (inclusive of failed subjects) taken by the student up to and including the latest semester/term. For subjects which have been retaken, only the grade point obtained in the final attempt will be included in the GPA calculation

In addition, the following subjects will be excluded from the GPA calculation:

- (a) Exempted subjects
- (b) Ungraded subjects
- (c) Incomplete subjects
- (d) Subjects for which credit transfer has been approved, but without any grade assigned*
- (e) Subjects from which a student has been allowed to withdraw (i.e. those with the code 'W')

* Subjects taken in PolyU or elsewhere and with grades assigned, and for which credit transfer has been approved, will be included in the GPA calculation.

Subject which has been given an "S" code, i.e. absent from all assessment components, will be included in the GPA calculation and will be counted as "zero" grade point. GPA is thus the unweighted cumulative average calculated for a student, for all relevant subjects taken from the start of the programme to a particular point of time. GPA is an indicator of overall performance, and ranges from 0.00 to 4.30 from 2020/21.

All training credits[#] will be counted in the GPA calculation but not in the WGPA calculation.

"Training credits" is used as a generic term only, and also includes clinical/field credits for programmes in different study disciplines. Laboratory experiments done as a subject/an integral part of a subject to satisfy the academic requirements is not considered to be practical training.

Codes to Denote Overall Subject Assessments

Codes	Interpretation	Remarks
I [^]	Assessment to be completed	An incomplete grade must be converted to a regular grade normally in the following academic year at the latest.
N	Assessment is not required	—
P	Pass an ungraded subject	This code applies to an ungraded subject, such as industrial training.
U	Fail an ungraded subject	This code applies to an ungraded subject, such as industrial training.
M	Pass with Merit	The adoption or otherwise of this code to other subjects adopting a "Pass/Fail" grading system would be subject to the decision of individual Departments. The grade "Pass with Merit" can be awarded when the student's work exceeds the subject learning outcomes in the majority of regards.
L	Subject to be continued in the following semester	This code applies to subjects like "Project" which may consist of more than 1 part (denoted by the same subject code) and for which continuous assessment is deemed appropriate.
S	Absent from all assessment components	—
W	Withdrawn from subject	Dropping of subjects after the add/drop period is normally not allowed. Requests for withdrawal from subjects after the add/drop period and prior to examination will only be considered under exceptional circumstances. This code is given when a student has obtained exceptional approval from Department to withdraw from a subject after the "add/drop" period and prior to examination; otherwise, a failure grade (grade F) should be awarded.
Z	Exempted	—
T	Transfer of credit	—
# [△]	Disqualification of result due to academic dishonesty/non-compliance with examination regulations	This code applies to failure (i.e. F and U grades) arising from disqualification of subject result due to academic dishonesty/non-compliance with examination regulations. The code will be removed subsequently when the student leaves the University.
% ⁺	Disqualification of result due to academic dishonesty	This code applies to failure (i.e. F and U grades) arising from disqualification of subject result due to academic dishonesty. The code will be removed subsequently when the student leaves the University.
@ ⁺	Disqualification of result due to non-compliance with examination regulations	This code applies to failure (i.e. F and U grades) arising from disqualification of subject result due to non-compliance with examination regulations. The code will be removed subsequently when the student leaves the University.

[^] For cases where students fail marginally in one of the components within a subject, the BoE can defer making a final decision until the students concerned have completed the necessary remedial work to the satisfaction of the subject examiner(s). The students can be assigned an ' I ' code in this circumstance. The remedial work must not take the form of re-examination.

[△] For cases before 2019/20.

⁺ For cases from 2019/20.

Note: Subjects with the assigned codes I, N, P, U, M, L, W, Z and T (if the subject is without grade transferred) will be omitted in the calculation of the GPA. A subject assigned code S will be taken as zero in the calculation.

D 18 Different Types of GPA

GPA's will be calculated for each Semester including the Summer Term. This Semester GPA will be used to determine students' eligibility to progress to the next Semester alongside with the 'cumulative GPA'. However, the Semester GPA calculated for the Summer Term will not be used for this purpose, unless the Summer Term study is mandatory for all students of the programme concerned and constitutes part of the graduation requirements.

The GPA calculated after the second Semester of the students' study is therefore a 'cumulative' GPA of all the subjects taken so far by students, and without applying any level weighting.

Along with the 'cumulative' GPA, a weighted GPA will also be calculated, to give an indication to the Board of Examiners on the award classification which a student will likely get if he/she makes steady progress on his/her academic studies.

When a student has satisfied the requirements for award, an award GPA will be calculated to determine his/her award classification.

The calculation methods of the different types of GPA are further explained in the table below.

Types of GPA	Purpose	Rules for GPA calculation
GPA	Determine Progression/ Graduation	<ul style="list-style-type: none"> (1) All academic subjects taken by the student throughout his/her study, both inside and outside the programme curriculum, are included in the GPA calculation. (2) For training subjects, including WIE and Clinical/Field subjects, departments can decide whether to include them in the GPA calculation. (3) For retake subjects, only the last attempt will be taken in the GPA calculation. (4) Level weighting, if any, will be ignored.
Semester GPA	Determine Progression	Similar to the rules for GPA as described above, except that only subjects taken in that Semester, including retaken subjects, will be included in the calculation.

Types of GPA	Purpose	Rules for GPA calculation
Weighted GPA	To give an interim indication on the likely Award GPA	<p>(1) Similar to the rules for GPA, except that only subjects inside the programme curriculum concerned will be included in the calculation. Subjects outside the programme curriculum will be excluded.</p> <p>(2) Departments can decide whether the training subjects are to be counted towards the Weighted GPA.</p> <p>(3) For retake subjects, only the last attempt will be taken in the Weighted GPA calculation.</p> <p>(4) A weighting of 2 for Level 1 and 2 subjects, and a weighting of 3 for Level 3 and 4 subjects, will be included in the calculation to determine the award classifications.</p> <p>(5) The weighted GPA will be the same as the Award GPA unless a student has taken more subjects than required.</p>
Award GPA	For determination of award classification	<p>(1) If the student has not taken more subjects than required, the Award GPA will be as follows:</p> <p>For programmes with level weightings: Award GPA = Weighted GPA</p> <p>(2) If the student has taken more subjects than required, refer to Section D20 below.</p>

D 19 Compulsory Graduation

A student is required to graduate as soon as he/she satisfies the graduation requirements.

D 20 Guidelines for Award Classification

The Weighted GPA will be used as a guide to help determine award classifications.

Weighted GPA will be computed as follows:

$$\text{Weighted GPA} = \frac{\sum_{n=1}^N \text{Subject Grade Point}_n \times \text{Subject Credit Value}_n \times W_n}{\sum_{n=1}^N \text{Subject Credit Value}_n \times W_n}$$

where W_n = weighting to be assigned according to the level of the subject

N = number of all subjects counted in GPA calculation

Same as for GPA, Weighted GPA ranges from 0.00 to 4.30 from 2020/21.

Any subjects passed after the graduation requirement has been met or subjects taken on top of the prescribed credit requirements for award shall not be taken into account in the grade point calculation for award classification. However, if a student attempts more elective subjects (or optional subjects) than those required for graduation in or before the semester in which he/she becomes eligible for award, the elective subjects (or optional subjects), except for subjects which are selected by students to fulfill the free electives requirement for graduation, with a higher grade/contribution shall be included in the grade point calculation (i.e. the excessive subjects attempted with a lower grade/contribution, including failed subjects, will be excluded).

D 21 Classification of Awards

The following are guidelines for Boards of Examiners' reference in determining award classifications:

Classification	Guidelines
Distinction	The student's performance/attainment is outstanding, and identifies him/her as exceptionally able in the field covered by the programme in question.
Credit	The student has reached a standard of performance/attainment which is more than satisfactory but less than outstanding.
Pass	The student has reached a standard of performance/attainment ranging from just adequate to satisfactory

Students who have committed academic dishonesty or non-compliance with examination regulations will be subject to the penalty of the lowering of award classification by one level. The minimum of downgraded overall result will be kept at a Pass. In rare circumstances where both the Student Discipline

Committee and Board of Examiners of a Department consider that there are strong justifications showing the offence be less serious, the requirement for lowering the award classification can be waived.

The following are the award GPA ranges for determining award classifications:

Award	Award GPA
Distinction	3.60 – 4.30
Credit	3.00 – 3.59
Pass	1.70 – 2.99

Decisions by the Boards of Examiners on award classifications to be granted to each student on completion of the programme shall be ratified by the Faculty/School Board (of Examiners). For cases the decisions of which do not conform to the above indicative GPA range, they should be referred, by the Faculty/School Board (of Examiners), to the APRC for ratification.

D 22 Examination Result Announcements, Transcripts, Testimonials and References

At the end of each semester, where appropriate, examination results are announced online for individual students' checking. It provides information on subjects taken and grades attained, the Grade Point Average (GPA) for all subjects, and the overall result up to and including the latest semester. The announcement serves as an official notification of the student's academic performance.

A formal Transcript of Studies will be issued by the University, upon request, to any student registered on a programme offered by the University, and it will include the following information:

- (a) name and student number;
- (b) title of the programme on which enrolled, or from which graduated;
- (c) medium of instruction for the programme (applicable only to programmes which are delivered in Chinese and for which both Chinese and English versions are offered);
- (d) a full academic record, giving subjects taken and grades attained, and the Grade Point Average (GPA) for all subjects (this shall include any practical training undertaken, which fulfill the training credit requirement of the programme concerned);
- (e) credit requirement of the student if different from the normal credit requirement of the programme; and
- (f) where relevant, the final award, with classification and year of award.

Students may request for a testimonial which is a certification of their studies at the University, but without details on subjects and subject results.

Students may also request for references direct from academic staff/members concerned.

D 23 Recording of Disciplinary Actions in Students' Records

With effect from Semester One of 2015/16, disciplinary actions against students' misconducts will be recorded in students' records.

Students who are found guilty of academic dishonesty or non-compliance with examination regulations will be subject to the penalty of having the subject result concerned disqualified and be given a failure grade with a remark denoting 'Disqualification of result due to academic dishonesty/dishonesty/noncompliance with examination regulations'. The remark will be shown in the students' record as well as the assessment result notification and transcript of studies, until their leaving the University.

Students who have committed disciplinary offences (covering both academic and non-academic related matters) will be put on 'disciplinary probation'. The status of 'disciplinary probation' will be shown in the students' record as well as the assessment result notification, transcript of studies and testimonial during the probation period, until their leaving the University. The disciplinary probation is normally one year unless otherwise decided by the Student Discipline Committee.

The University reserves the right to withhold the issuance of any certificate of study to a student/graduand who has unsettled matters with the University, or subject to disciplinary action.

Subject Description Form

Subject Code	AMA1110																												
Subject Title	Basic Mathematics I – Calculus and Probability & Statistics																												
Credit Value	3																												
Level	1																												
Pre-requisite/ Co-requisite/ Exclusion	Nil																												
Objectives	This subject aims to introduce students to the basic concepts and applications of elementary calculus and statistics. Emphasis will be on the understanding of fundamental concepts and the use of mathematical techniques in handling practical problems in science and engineering.																												
Intended Learning Outcomes	Upon completion of the subject, students will be able to: (a) apply analytical reasoning to solve problems in science and engineering; (b) make use of the knowledge of mathematical/statistical techniques and adapt known solutions to various situations; (c) apply mathematical modeling in problem solving; (d) demonstrate abilities of logical and analytical thinking.																												
Subject Synopsis/ Indicative Syllabus	<u>Elementary calculus</u> : Limit and continuity, derivatives and their geometric meaning, rules of differentiation including chain rule, Leibniz's rule and L'Hopital's rule, exponential and logarithmic functions, trigonometric functions and their inverses, hyperbolic and inverse hyperbolic functions, applications of differential calculus. <u>Elementary Probability and Statistics</u> : Descriptive statistics, random variables, probability and probability distributions, binomial, Poisson and normal distributions, applications. Population and random samples. Sampling distributions related to sample mean, sample proportions, and sample variances. Concepts of a point estimator and a confidence interval. Point and interval estimates of a mean and the difference between two means.																												
Teaching/Learning Methodology	Basic concepts and elementary techniques of differential and integral calculus and elementary statistics will be taught in lectures. These will be further enhanced in tutorials through practical problem solving.																												
Assessment Methods in Alignment with Intended Learning Outcomes	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th rowspan="2">Specific assessment methods/tasks</th> <th rowspan="2">% weighting</th> <th colspan="4">Intended subject learning outcomes to be assessed</th> </tr> <tr> <th>a</th> <th>b</th> <th>c</th> <th>d</th> </tr> </thead> <tbody> <tr> <td>1. Subject Description Form

Subject Code	AMA2111
Subject Title	Mathematics I
Credit Value	3
Level	2
Pre-requisite/ Co-requisite/ Exclusion	Pre-requisite: AMA1007, AMA1101, AMA1102, AMA1120, AMA1130 or AMA1500 Exclusion: AMA2007, AMA2008, AMA2308, AMA2380, AMA2511, AMA2882 and AMA290
Objectives	This subject aims to introduce students to the basic principles and techniques of engineering mathematics. Emphasis will be on the understanding of fundamental concepts as well as applications of mathematical methods in solving practical problems in science and engineering.
Intended Learning Outcomes	Upon completion of the subject, students will be able to: a. apply mathematical reasoning to analyze essential features of different problems in science and engineering; b. extend their knowledge of mathematical and numerical techniques and adapt known solutions in various situations; c. develop and extrapolate the mathematical concepts in synthesizing and solving new problems d. demonstrate abilities of logical and analytical thinking; e. search for useful information in the process of problem solving.
Subject Synopsis/ Indicative Syllabus	1. <u>Algebra of complex numbers</u> Complex numbers, geometric representation, complex exponential functions, n-th roots of a complex number. 2. <u>Linear algebra</u> Systems of linear equations, vector spaces, inner product and orthogonality, eigenvalues and eigenvectors, applications. 3. <u>Ordinary differential equations</u> ODE of first and second order, linear systems, Laplace transforms, Convolution theorem, applications to mechanical vibrations and simple circuits. 4. <u>Differential calculus of functions of several variables</u> Partial derivatives, total differential, chain rule, Taylor's expansion, maxima and minima, directional derivatives, Lagrange multipliers, implicit differentiation, applications.
Teaching/Learning Methodology	The subject will be delivered mainly through lectures and tutorials. The lectures aim to provide the students with an integrated knowledge required for the understanding and application of mathematical concepts and techniques. Tutorials will mainly be used to develop students' problem solving ability.

July 2021

Subject Description Form

Subject Code	AP10001
Subject Title	Introduction to Physics
Credit Value	3
Level	1
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	This is a subject designed for students with no background in physics studies. Fundamental concepts in major topics of physics (mechanics, heat, wave and electromagnetism) will be discussed. The aim of this subject is to equip students with some basic physics knowledge, and to appreciate its applications in various branches of science and technology.
Intended Learning Outcomes	Upon completion of the subject, students will be able to: a. solve simple problems in kinematics Newton's law and Energy; b. solve problems in heat capacity and latent heat; c. explain phenomena related to the wave character of light; d. apply the superposition of waves; e. understand electrostatic field and potential; f. solve problems on interaction between current and magnetic field; and g. describe and demonstrate the phenomenon of electromagnetism.
Subject Synopsis/ Indicative Syllabus	<p>Mechanics: scalars and vectors; kinematics and dynamics; Newton's laws; momentum, impulse, work and energy; conservation of momentum and conservation of energy.</p> <p>Thermal physics: heat and internal energy; heat capacity; conduction, convection and radiation; latent heat.</p> <p>Waves: nature of waves; wave motion; reflection and refraction; image formation by mirrors and lenses; superposition of waves; standing waves; diffraction and interference; electromagnetic spectrum; sound waves.</p> <p>Electromagnetism: charges; Coulomb's law; electric field and potential; current and resistance; Ohm's law; magnetic field; magnetic force on moving charges and current-carrying conductors; Faraday's law and Lenz's law.</p>
Teaching/Learning Methodology	<p>Lecture: Fundamentals in mechanics, waves and electromagnetism will be explained. Examples will be used to illustrate the concepts and ideas in the lecture. Students are free to request help. Homework problem sets will be given.</p> <p>Student-centered Tutorial: Students will work on a set of problems in tutorials. Students are encouraged to solve problems and to use their own knowledge to verify their solutions before seeking assistance. These problem sets provide them opportunities to apply their knowledge gained from the lecture. They also help the students to</p>

	consolidate what they have learned. Furthermore, students can develop a deeper understanding of the subject in relation to daily life phenomena or experience.								
	e-learning: In order to enhance the effectiveness of teaching and learning processes, electronic means and multimedia technologies would be adopted for presentations of lectures; communication between students and lecturer; delivery of handouts, homework and notices etc.								
Assessment Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed						
			a	b	c	d	e	f	g
	1. Continuous assessment	40%	✓	✓	✓	✓	✓	✓	✓
	2. Examination	60%	✓	✓	✓	✓	✓	✓	✓
	Total	100%							
	<p>Continuous assessment: The continuous assessment includes assignments, quizzes and test(s) which aim at checking the progress of students study throughout the course, assisting them in fulfilling the learning outcomes. Assignments in general include end-of-chapter problems, which are used to reinforce and assess the concepts and skills acquired by the students; and to let them know the level of understanding that they are expected to reach. At least one test would be administered during the course of the subject as a means of timely checking of learning progress by referring to the intended outcomes, and as means of checking how effective the students digest and consolidate the materials taught in the class.</p> <p>Examination: This is a major assessment component of the subject. It would be a closed-book examination. Complicated formulas would be given to avoid rote memory, such that the emphasis of assessment would be put on testing the understanding, analysis and problem solving ability of the students.</p>								
Student Study Effort Expected	Class contact:								
	▪ Lecture						33 Hrs.		
	▪ Tutorial						6 Hrs.		
	Other student study effort:								
	▪ Self-study						81 Hrs.

July 2021

Subject Description Form

Subject Code	AP10005
Subject Title	Physics I
Credit Value	3
Level	1
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	This course provides a broad foundation in mechanics and thermal physics to those students who are going to study science, engineering, or related programmes.
Intended Learning Outcomes	Upon completion of the subject, students will be able to: a. solve simple problems in single-particle mechanics using calculus and vectors; b. solve problems in mechanics of many-particle systems using calculus and vectors; c. understand simple harmonic motion and solve simple problems; d. solve problems related to acoustic standing waves; e. calculate changes in frequency received due to Doppler's effect; f. apply ideal gas laws to solve problems; g. apply the first law of thermodynamics to simple processes; and h. solve simple problems related to the cyclic processes.
Subject Synopsis/ Indicative Syllabus	Mechanics: calculus-based kinematics, dynamics and Newton's laws; calculus-based Newtonian mechanics, involving the application of impulse, momentum, work and energy, etc.; conservation law; gravitational force; systems of particles; collisions; rigid body rotation; angular momentum; oscillations and simple harmonic motion; pendulum; statics; longitudinal and transverse waves; travelling wave and standing wave; Doppler effect; sound waves and beats. Thermal physics: conduction, convection and radiation; black body radiation; ideal gas and kinetic theory; work, heat and internal energy; first law of thermodynamics; entropy and the second law of thermodynamics; Carnot cycle; heat engine and refrigerators.
Teaching/Learning Methodology	Lecture: Fundamentals in mechanics, waves and electromagnetism will be explained. Examples will be used to illustrate the concepts and ideas in the lecture. Students are free to request help. Homework problem sets will be given. Student-centered Tutorial: Students will work on a set of problems in tutorials. Students are encouraged to solve problems and to use their own knowledge to verify their solutions before seeking assistance. These problem sets provide them opportunities to apply their knowledge gained from the lecture. They also help the students to consolidate what they have learned. Furthermore, students can develop a deeper understanding of the subject in relation to daily life phenomena or experience.

Subject Code	CLC1104C (Cantonese) / CLC1104P (Putonghua) [2019-20 onward] CBS1104C (Cantonese) / CBS1104P (Putonghua) [2018-19 and before] <i>Remarks: Students taking the Cantonese version of CLC/CBS1104 (i.e. CLC/CBS1104C) will be offered a 39 hour non-credit bearing e-learning course in Putonghua (optional).</i>
Subject Title	University Chinese (大學中文)
Credit Value	3
Level	1
Pre-requisite / Co-requisite/ Exclusion	Students with HKDSE Chinese subject result at level 3 or above or equivalent
Objectives	This subject aims at enhancing the students' command of language knowledge to communicate effectively in both written and spoken Chinese, with particular reference to the stylistic variations of expression in different communicative settings. The ultimate goal of this subject is to train students to be effective communicators and life-long learners, and to equip them for the Chinese Discipline-Specific Language Requirement subject.
Intended Learning Outcomes	Upon completion of the subject, students will be able to: (a) consolidate the ability to identify and correct the most common errors in written texts; (b) develop Chinese writing skills through the analysis and in-depth reading of selected literary masterpieces; (c) master the format, organization, language and style of expression of various genres of Chinese writing; (d) produce formal presentations in spoken Chinese effectively and appropriately.
Subject Synopsis/ Indicative Syllabus	1. Written communication Language, format and organization of each genre; coherence and thread of thinking in Chinese writing; style of expression of different genres; context dependent stylistic variation; development of logical and persuasive arguments. 2. Spoken communication Choice of words; articulation and flow of speaking; manner of speaking and gesture; identification of main idea and key messages; evaluation of relevancy of information in a message; skills of summarizing; agreeing / disagreeing / answering to questions politely; use of visual aids; body movement. 3. Reading strategies Intensive and critical reading; identification of authors' stances, arguments and purposes; extracting useful information from the texts; determination of the meanings of the important concept words in context; evaluation of the validity of the factual information and arguments of the texts; appreciation of different genres including literary masterpieces. 4. Language development Grammatical skills; use of clear words; use of specific sentences; choice of diction.

Teaching/Learning Methodology	The teaching/learning methodology is a combination of highly interactive seminars, self-formed study groups, seminar discussion, oral presentations and written assignments. E-learning materials for enhancing students' proficiency in both spoken and written Chinese are included in Chinese LCR teaching. Students are expected to follow teachers' guidelines and get access to the materials on the e-Learning platform for self-study on a voluntary basis.					
Assessment Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed

Subject Description Form

Subject Code	CLC1105C (Cantonese) / CLC1105P (Putonghua) [2019-20 onward] CBS1105C (Cantonese) / CBS1105P (Putonghua) [2018-19 and before]
Subject Title	University Chinese for Higher Diploma Students 大學中文 (高級文憑課程) <i>Remarks: Students taking the Cantonese version of CLC/CBS1105 (i.e. CLC/CBS1105C) will be offered a 39 hour non-credit bearing e-learning course in Putonghua (optional).</i>
Credit Value	3
Level	1
Pre-requisite / Co-requisite/ Exclusion	Students with HKDSE Chinese subject result at level 2 or equivalent
Objectives	This subject aims at enhancing higher diploma students' command of Chinese language knowledge to communicate accurately and appropriately in both written and spoken forms, with particular reference to their basic proficiency in Chinese at the tertiary level.
Intended Learning Outcomes	Upon completion of the subject, students will be able to: a. improve their Chinese language ability by revising the most common grammatical errors in written texts in terms of accuracy, relevance, appropriateness and completeness; b. demonstrate the basic logic, format, structure and potentials behind Chinese writing; c. make use of the resources available in producing different genres such as expository / persuasive / argumentative tasks, according to the different communicative purposes; d. perform oral presentations in a clear and systematic way.
Subject Synopsis/ Indicative Syllabus	1. Written communication • editing language errors to develop the awareness of choice of words. • enhancing basic competence in the skill of summarizing • producing a topic in a systematic way with linguistic accuracy, clear arguments and logical structure. • applying expository/persuasive/argumentative skills to practical usage. 2. Spoken communication • different strategies to convey messages in a well-structured way. • appropriate verbal and non-verbal strategies in oral interactions to convince people. • effective skills of seeking clarity/consent/disagreement/answer to a question • critical thinking skills for group discussions of issues. 3. Language development • vocabulary building and word choice. • accuracy in Chinese language usage.
Teaching/Learning Methodology	The teaching/learning methodology is a combination of highly interactive seminars, self-formed study groups, seminar discussion, oral presentations and written assignments. E-learning materials for enhancing students' proficiency in both spoken and written Chinese are included in Chinese LCR teaching. Students are expected to follow teachers' guidelines and get access to the materials on the e-Learning platform for self-study on a voluntary basis. Additional reference materials will be recommended as required.

July 2021

Subject Description Form

Subject Code	EE2002C
Subject Title	Circuit Analysis
Credit Value	3
Level	2
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	<ol style="list-style-type: none"> 1. Introduce fundamental circuit theory. 2. Develop ability for solving problems involving electric circuits. 3. Develop skills for experimentation on electric circuits.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Acquire a good understanding of fundamental circuit theory. b. Solve simple problems in electric circuits. c. Use suitable instrumentation to carry out experimental investigations to validate the theoretical investigations.
Subject Synopsis/ Indicative Syllabus	<p>Syllabus:</p> <ol style="list-style-type: none"> 1. <u>DC Circuits</u> Introduction to electric circuits. Voltage and current as two basic variables. Kirchhoff's current and voltage laws. Independent and dependent sources. Simple circuit styles: voltage divider, current divider, series and parallel circuits. Nodal and mesh analyses. Thévenin and Norton theorems. Power dissipation. Source loading and maximum power transfer. 2. <u>Capacitance, Inductance and First Order Transients</u> Constitutive relations of capacitor and inductor. Introduction to time-varying circuits. Simple RC and LC circuits. Important concept of independent state variables. First-order differential equation (with simple solution of exponential form). First order transient analysis. Time-domain solution and transient behaviour of first order circuits. 3. <u>Steady-state Analysis of AC Circuits</u> Average and rms values. Phasors (rotating vectors). Steady-state analysis of circuits driven by single fixed frequency sinusoidal sources. Impedance and admittance. Analysis approach 1: phasor diagrams for simple circuits. Analysis approach 2: systematic complex number analysis, i.e., same treatment as DC circuits but with complex numbers representing phase and magnitude of AC voltages and currents. Real and reactive powers. Power factor. Three-phase circuits. 4. <u>Mutual Inductance and Transformer</u> Basic coupled inductance equation. Concept of ideal transformer (assuming sinusoidal voltages and currents). Dot convention. Physical transformer as ideal transformer with leakage and magnetizing inductances. Applications in galvanic isolation and voltage/current level conversion. 5. <u>Electrical Measurement</u> Measurement uncertainties. Resistance measurement: Four-probe measurement and Wheatstone Bridge. Capacitance and inductance measurement using AC Bridges. Power Measurement. Measuring three-phase power by two-wattmeter method.

	Laboratory Experiments:		
	<ol style="list-style-type: none"> 1. Kirchhoff's laws and the maximum power transfer theorem 2. Transients in RC and RL circuits 3. AC Circuits and Transformer Tests 		
Teaching/ Learning Methodology	Lectures, supplemented with interactive questions and answers, and short quizzes	a, b	In lectures, students are introduced to the <i>knowledge</i> of the subject, and <i>comprehension</i> is strengthened with interactive Q&A and short quizzes.
	Tutorials, where problems are discussed and are given to students for them to solve	a, b	In tutorials, students <i>apply</i> what they have learnt in solving the problems given by the tutor.
	Laboratory sessions, where students will perform experimental verifications. They will have to record results and write a report on one of the experiments.	b, c	Students <i>acquire</i> hands-on experience in using electronic equipment and <i>apply</i> what they have learnt in lectures/tutorials to experimentally validate the theoretical investigations.
	Assignment and Homework	a, b	Through working assignment and homework, students will develop a firm understanding and <i>comprehension</i> of the <i>knowledge</i> taught.
Assessment Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/task	% Weighting	Intended Subject Learning Outcomes to be Assessed
			a b c
	1. Continuous Assessment (Total 40%)

	▪ Laboratory works and reports	18%	✓ ✓
	▪ Mid-semester test	18%	✓ ✓
	2. Examination	60%	✓ ✓
Total	100%		
Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes:			

	Specific assessment methods/task	Remark
	Assignment/ Homework	Assignments are given to students to assess their competence level of <i>knowledge</i> and <i>comprehension</i> . The criteria (i.e. <i>what</i> to be demonstrated) and level (i.e. the <i>extent</i>) of achievement will be graded according to five levels: Outstand (A+ and A), Good (B+ and B), Satisfactory (C+ and C), Marginal (D+ and D) and Failure (F). These will be made known to the students before an assignment/homework is given. Feedback about their performance will be given promptly to students to help them improvement their learning.
	Laboratory works and reports	Students will be required to perform three experiments and submit a report on one of the experiments. Expectation and grading criteria will be given as in the case of assignment/homework.
	Mid-semester test	There will be a mid-semester test to evaluate students' achievement of all the learning outcomes and give feedback to them for prompt improvement. Expectation and grading criteria will be given as in the case of assignment/homework.
	Examination	There will be an examination to assess students' achievement of all the learning outcomes. These are mainly summative in nature. Expectation and grading criteria will be given as in the case of assignment/homework.
Student Study Effort Expected	Class contact:

Subject Description Form

Subject Code	EE2004C
Subject Title	Electrical Energy Systems Fundamentals
Credit Value	3
Level	2
Pre-requisite/ Co-requisite/ Exclusion	Pre-requisite: EE2002C
Objectives	<ol style="list-style-type: none"> To provide an overview of the supply, utilization, and control of electrical energy. To introduce energy and assist students in placing these topics and technologies in perspective.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able:</p> <ol style="list-style-type: none"> To master the fundamental knowledge on electrical energy systems. To identify, analyze, and solve technical problems using mathematics and engineering techniques. To be aware of equipment characteristics on modern electrical power systems. To be able to conduct laboratory work in teams and present the findings.
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> Nature of electrical energy system: Power system definition, layout and basic components, transmission and distribution structure, role of transformers. The interconnected power system. HVDC transmission. Layout of a substation, distribution structure, overhead lines and cables, circuit breaking, protection concepts, line protection. Generation, & energy: Principles of energy conversion, power plant and busbar layout, types of generators and turbines. Concept of generation control and operating chart. Pumped storage and wind turbine. Renewable and non-renewable sources. Sustainable development. Basic principles: Concept of phasor, representation and properties of phasor. Inductive and capacitive circuit. Real and reactive power. Single and three phase systems. Per unit system and calculation. Power factor correction. Transformers: Construction and operating principles. Equivalent circuits. Tests on transformers. Voltage regulation and power efficiency. Parallel operation. Three-phase transformers and phase grouping. Per-phase analysis. Autotransformers and instrument transformers. Line & cables: Overhead line construction including transposition and bundling. Primary (RLCG) and general (ABCD) parameter calculations. Line equations and performance calculations. Corona loss and interference. Cable types and construction. Electrical stress and thermal characteristics. Tariffs: Concept and structure of electricity market. Concepts of tariff design. Tariff structures. Conventional and new tariffs in different utilities. Two-part tariff, introduction to deregulation and load management concepts. <p>Laboratory Experiment: Experiments on single phase transformer. Experiments on three phase transformer. Computer exercises on transmission line parameters calculations.</p> <p>Case study: The environmental impacts of nuclear power generation. The environmental impacts of fossil fuel power generation. The environmental impacts on the development of large scale hydropower station. Why modern electric power systems are often interconnected.</p>

	The renewable energy sources which may be used in Hong Kong.					
Teaching/Learning Methodology	Lectures are the primary means of conveying the basic concepts and knowledge, teaching students the skills in identifying, analyzing and solving technical problems, and providing students feedback in relation to their learning. Laboratory experiments and case studies are designed, as supplement to the lecturing materials, for students to gain practical experiences and be aware of equipment characteristics and environment issues on the modern electrical power system.

Subject Description Form

Subject Code	EE2007C
Subject Title	Computer System Fundamentals
Credit Value	3
Level	2
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	<ol style="list-style-type: none"> To enable students to establish a broad knowledge of the structure of a generic computer system. To enable students to understand software development in an embedded system. To enable students to utilize a microcontroller to solve engineering problems
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> Given specifications of an application, design the software to carry out the necessary operations in an embedded system. Understand advanced features of the latest microprocessors and understand functions of basic computer peripherals. Given a set of conditions, design a computer system to solve the problem Think logically and be able to present results in writing.
Subject Synopsis/ Indicative Syllabus	<p>Computer Systems Hardware and Operations</p> <ol style="list-style-type: none"> <i>Microprocessor operation and internal architecture:</i> Operations of registers, buses and data path, operations of ALU and general pipeline architecture. Introduction to structure and operation of a modern microprocessor. <i>Memory organization:</i> Characteristics of current memory technologies. Memory hierarchies and memory decoding mechanism. <i>Input and output systems:</i> Direct I/O system and memory mapped I/O; I2C and SPI; interrupt and polling mechanisms. <i>Microprocessor hardware and interfacing:</i> System bus organization and interfacing techniques, CPU bus timing, system bus structure. <p>Introduction to Embedded System and Software</p> <ol style="list-style-type: none"> <i>Introduction to Arduino software tool:</i> Integrated Development Environment (IDE) for Arduino, basic program syntax. <i>Input/Output operations and applications:</i> Introduction to serial communication, digital I/O, analogue I/O and PWM (Pulse Width Modulation). Introduction to assembly language programming <p>Laboratory Experiment: Perform basic input/output operations of an embedded computer systems by C programming language with the Arduino processor Speed control of a DC motor based on input from a sensor Implement the interrupt service program in an embedded microcontroller.</p>

Teaching/ Learning Methodology	Lectures and tutorials are the primary means of conveying the basic concepts and theories. Experiences on design, practical applications and programming are given through experiments, in which the students are expected to solve design problems with real-life constraints and to attain feasible solutions with critical and analytical thinking. Interactive laboratory sessions are introduced to encourage better preparation and hence understanding of the experiments. On-the-spot assessments are conducted in the laboratory to provide additional incentives for student learning. Experiments are designed to supplement the lecturing materials, especially in software development, so that students are encouraged to take extra readings and to look for relevant information.

July 2021

Subject Description Form

Subject Code	EE2009C
Subject Title	Group Project
Credit Value	6
Level	2
Pre-requisite/ Co-requisite/ Exclusion	Pre-requisite: Students should have completed most of the subjects required in Year 1 of the programme including the online tutorial on academic integrity before taking this subject.
Objectives	To provide an opportunity for students: 1. to apply specialized engineering knowledge as a group in the design, implementation, managing and evaluation of an engineering project, 2. to identify key engineering problems, to solve them and to communicate the findings in presentation and written report format, and 3. to work effectively and efficiently as a team for a technical project, students are normally grouped into teams of two or three.
Subject Intended Learning Outcomes	Upon completion of the subject, students will be able to: a. apply specialized knowledge learnt from the program; b. identify key engineering problems, to solve them and to communicate what is achieved orally and in written reports; c. monitor the progress of project from concept to final implementation and testing; d. synthesize and apply their knowledge, analytical and practical skills gained in various disciplines; e. build team spirit, confidence and develop professionalism by successfully completing the project.
Subject Synopsis/ Indicative Syllabus	Choice of Project Projects are proposed by academic staff, or jointly proposed by students and staff. Industrial experience, research and consultancy activities are fertile ground for project ideas. Project Plan At the beginning of the project, students are required to submit a clear project proposal. The proposal should include items such as: – an abstract and clear objectives of the project; – brief literature survey, background theory; – suggested methods to solve the problem; – preliminary time schedule; – cost estimate; – references Interim Progress Report and Presentation A progress report should be submitted between the end of the 1 st semester and the start of the 2 nd semester. This gives the supervisor a more formal opportunity than at discussions to indicate his assessment of students' progress and to eliminate discrepancies if necessary. In addition, students must present their progress to an assessor after the submission of the report. Final Project Report

	<p>A good project schedule includes adequate time for preparing a report of the appropriate standard. The final report should be submitted in Week 10 of the Second Semester. These will be given to the Assessment Panel for understanding of the students' work and for assessment purpose. To ensure that the project report is prepared properly and of appropriate standard, students must first submit a draft of the report to the supervisor for comments.</p> <p>Each project is assessed by an Assessment Panel of three members, including two examiners and the project Supervisor.</p> <p>The Project Supervisor will provide information on student's progress, initiative and ability to work independently. The Supervisor will also be in a position to contribute views on the students' technical achievement. All members of the Assessment Panel will read the project report. The examiners will reach their decision after:</p> <ul style="list-style-type: none"> – listening to the students' presentation (could be a video clip), – examining students during the poster presentation, and – evaluate the project's outcomes based on a demonstration (could be a video clip). <p>Assessment</p> <p>In assessing the project, the assessors will typically consider the following aspects:</p> <ol style="list-style-type: none"> a. Intellectual achievement; b. In-depth understanding of the topic and relevant topics; c. Quantity and quality of work being achieved, including design and construction of equipment, experimentation, mathematical models, program writing, verification; d. Presentation including the written report, presentation and response to questions. <p>Examiners will ensure that all aspects of the project are thoroughly considered before arriving at a grade. In arriving at their decision, the examiners should bear in mind their experiences in respect of the achievements in other projects in the Department in the current and previous years.</p> <p>Method of Assessment: 100% continuous assessment</p> <p>(I) Formal Project Proposal</p> <p>Students are required to submit a formal project proposal when the project commences. This will contribute to 5% of the final grade.</p> <p>The contents of the proposal should include:</p> <ol style="list-style-type: none"> A. An abstract and objectives of the project B. Proposed specifications of the product C. Summary of the literature search D. Proposed approach/methodology to be used E. Some brief descriptions on the theory of the approach/methodology F. Time table / schedule of your work of the entire project G. References <p>Assessment Criteria</p> <ol style="list-style-type: none"> 1. Literature review. 2. Problem definition and methodology. 3. Project plan. 4. Writing quality. <p>(II) The Interim Progress Report</p> <p>Students are required to submit an interim progress report after semester 1. This will contribute to 10% of the final grade.</p> <p>The contents of the progress report should include:</p> <ol style="list-style-type: none"> A. An abstract and aims of the project (especially any change from the original aims). B. A brief outline of the theory. C. Work that has been carried out up to the date. D. The system design and the block diagram of the system, brief descriptions on the
--	--

	<p>theory.</p> <p>E. Difficulties encountered and the measures taken to solve them.</p> <p>F. Proposed schedule for the rest of the work up to the end of the project.</p> <p>G. Difficulties expected in the coming period.</p> <p>H. References</p> <p>Assessment Criteria</p> <ol style="list-style-type: none"> 1. <i>Abstract and introduction</i> 2. <i>Methodology</i> 3. <i>Preliminary results</i> 4. <i>Project management and overall presentation of the report</i> <p>(III) Mid-term presentation</p> <p>Students are required to present the progress to an assessor after the submission of the Interim Progress Report. The presentation will contribute to 10% of the final grade.</p> <p>Assessment Criteria</p> <ol style="list-style-type: none"> 1. <i>Technical concept/knowledge/application</i> 2. <i>Up-to-date progress and preliminary results</i> 3. <i>Response to questions</i> 4. <i>Presentation skill and language competence.</i> <p>(IV) The Final Report</p> <p>The final project report should contain all the work carried out by the students in the project. The length of the main body of the final report should be at least 45 pages in standard report format. Students are advised to form a framework for the report first, and then proceed to the formation of the titles of the chapters. The titles and structure of the sections within each chapter are then decided. Continuing the process, each section may be further expanded into appropriate sub-sections, divisions and sub-divisions etc., until a complete framework is formed. The final report will contribute to 40% of the final grade.</p> <p>The content of the final report includes:</p> <ol style="list-style-type: none"> A. An abstract of the project. B. Objectives of the project (especially any change from the original aims). C. The motivation behind the project and a brief outline of the project work. D. A summary of work done or developed in the project. E. The system design and the block diagram of the system, plus descriptions on the theory. F. Results and discussion G. Difficulties encountered and the measures taken to solve them. H. The achievement of the project, the conclusions from the work and suggestions for further work. I. A list of the references referred to the source of information in the report. This is compulsory. J. Materials which are closely related to the contents of the report, and which are themselves self-contained, may be included in the report as appendixes. <p>Assessment Criteria</p> <ol style="list-style-type: none"> 1. <i>Abstract and introduction</i> 2. <i>Literature review and background</i> 3. <i>Methodology and technical skills</i> 4. <i>Results, discussions and conclusion</i> 5. <i>Overall presentation and organization of the report</i> <p>(V) The Presentation and Demonstration</p>
--	--

	<p>The students should keep the presentation concise and interesting through good use of visual aids and multimedia, logic flow of ideas, and appropriate control of the pace. Show good mastering of topics and avoid undue pauses. The students should be able to elaborate on technical details in answering questions. Be courteous during the poster presentation.</p> <p>Hardware must be neatly built and laid out and there is good engineering sense in hardware implementation. Circuits / software should function properly, and experiments should be able to support fulfillment of project objectives.</p> <p>The presentation and demonstration will contribute to 25% of the final grade.</p> <p>Assessment Criteria</p> <ol style="list-style-type: none"> 1. <i>Technical concept/knowledge/application</i> 2. <i>Intellectual level, response to questions</i> 3. <i>Demonstration and engineering accomplishment</i> 4. <i>Presentation skill and language competence.</i> <p>(VI) Continuous Assessment</p> <p>The project supervisor will assess the students' overall performance based on the following factors. This will contribute to 10% of the final grade.</p> <ol style="list-style-type: none"> 1. Motivation and perseverance 2. Originality and innovation of the project 3. Execution and problem solving skills 4. Communication 5. Self-discipline and time management <p>Note 1: Each student has to submit/carry out all five components (I to V) as a group before he/she is considered to have completed the FYP.</p> <p>Note 2: The final grade for the FYP will be calculated by taking the weighted average of the grades from the above six components.</p> <p>Note 3: Although it is a group project, different grades may be awarded to different members of the group if it is found that contributions from different members vary significantly.</p>																																									
Teaching/Learning Methodology	<p>As the nature of the subject implies, there will not be many formal lectures in the subject, other than a few hours of briefings on general information, some official procedures in administration of the project and some techniques on information/ components searching. Students learn the technical contents by a substantial number of individual discussions with their project supervisors and a large number of hours of self-learning. The planning of the project will be conducted under the direction of the supervisor. Through the execution of the project plan with guidance from the supervisor, the student should be able to achieve the learning outcomes.</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th rowspan="2">Teaching/Learning Methodology</th> <th colspan="5">Outcomes</th> </tr> <tr> <th>a</th> <th>b</th> <th>c</th> <th>d</th> <th>e</th> </tr> </thead> <tbody> <tr> <td>Discussion with the project Supervisor</td> <td style="text-align: center;">✓</td> <td></td> <td style="text-align: center;">✓</td> <td></td> <td></td> </tr> <tr> <td>Writing of the project proposal</td> <td style="text-align: center;">✓</td> <td style="text-align: center;">✓</td> <td style="text-align: center;">✓</td> <td></td> <td style="text-align: center;">✓</td> </tr> <tr> <td>Writing of the interim report</td> <td style="text-align: center;">✓</td> <td style="text-align: center;">✓</td> <td style="text-align: center;">✓</td> <td></td> <td style="text-align: center;">✓</td> </tr> <tr> <td>Writing of reports</td> <td style="text-align: center;">✓</td> <td style="text-align: center;">✓</td> <td style="text-align: center;">✓</td> <td style="text-align: center;">✓</td> <td style="text-align: center;">✓</td> </tr> <tr> <td>Presentation and demonstration</td> <td></td> <td style="text-align: center;">✓</td> <td></td> <td></td> <td></td> </tr> </tbody> </table>	Teaching/Learning Methodology	Outcomes					a	b	c	d	e	Discussion with the project Supervisor	✓		✓			Writing of the project proposal	✓	✓	✓		✓	Writing of the interim report	✓	✓	✓		✓	Writing of reports	✓	✓	✓	✓	✓	Presentation and demonstration		✓

July 2021

Subject Description Form

Subject Code	EE2101C/IC2105
Subject Title	Engineering Communication and Fundamentals
Credit Value	4 Training Credits
Level	2
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	This subject offers a wide spectrum of fundamental engineering practice that are essential for a professional engineer. This subject includes Engineering Drawing and CAD, Industrial Safety and Electronic Product Safety Test and Practice, Basic Mechatronic Practice and Basic Scientific Computing that aims at providing fundamental and necessary technical skills to all year 1 students interested in engineering.
Intended Learning Outcomes	Upon completion of the subject, students will be able to: <ul style="list-style-type: none"> a) Describe the principles and conventional representation of engineering drawings according to engineering standards and be able to use it as a medium in technical communication and documentation with CAD application, modelling and practice with application in mechanical, industrial systems and electrical engineering; b) Interpret basic occupational health and industrial safety requirements for engineering practice; c) Explain common electronic product safety tests; d) Design and implement simple mechatronic systems with programmable controller, software, actuation devices, sensing devices and mechanism; and e) Apply scientific computing software for computing in science and engineering including visualization and programming;
Subject Synopsis/ Indicative Syllabus	<p>Syllabus:</p> <ol style="list-style-type: none"> 1. <u>(TM8059) Engineering Drawing and CAD</u> <ol style="list-style-type: none"> 1.1. Fundamentals of Engineering Drawing and CAD Principles of orthographic projection; sectioning; dimensioning; sketching; general tolerances; conventional representation of screw threads and fasteners; types of drawings including part drawing and assembly drawing. Introduction to CAD; features of 2D CAD system (layer; draw; modify; block & attributes; standard library); techniques for the creation of titleblock; setup of 2D plotting; general concepts on 3D computer modeling; parametric feature based solid modeling; construction and detailing of solid features; solid model modification and its limitations; concepts of assembly modeling including bottom up and top down approaches for the generation of parts, subassemblies, and final assembly; virtual validation and simulation, generation of 2D drawings from 3D parts and assemblies; drawing annotation including dimensioning, tolerancing, and part list. 1.2. Electrical Drawing Wiring diagram and wiring table for electronic and electrical installation, functional representation of circuit, system block diagram, electrical and electronic device symbols and layout, architectural wiring diagram with

	<p>reference to the architectural symbols for electrical drawings in Hong Kong and international standards.</p> <ol style="list-style-type: none"> 2. <u>(TM2009) Industrial Safety</u> <ol style="list-style-type: none"> 2.1. Safety Management: Overview, essential elements of safety management, safety training, accident management, and emergency procedures. 2.2. Safety Law: F&IU Ordinance and principal regulations, OSH Ordinance and principal regulations. 2.3. Occupational Hygiene and Environmental Safety: Noise hazard and control; dust hazard and control; ergonomics of manual handling. 2.4. Safety Technology: Mechanical lifting, fire prevention, dangerous substances and chemical safety, machinery hazards and guarding, electrical safety, first aid, job safety analysis, fault tree analysis, personal protective equipment. 3. <u>(TM1116) Electronic Product Safety Test and Practice</u> <ol style="list-style-type: none"> 3.1 Use of basic electronic test instruments, current and voltage measurements, waveform measurement, power supply and signal sources; 3.2 Electronic product safety test method; High Voltage Isolation Test, Insulation Resistance Test, Continuity Test, Leakage Current Measurement, Electrostatic Discharge (ESD) Test. 4. <u>(TM0510) Basic Mechatronic Practice</u> <ol style="list-style-type: none"> 4.1. Definitions of mechatronics; design and operation of typical mechatronic systems; appreciation of measurement system, actuator system, motor drives, mechanical drives, gear train and linkage, pneumatic and hydraulic systems, signal conditioning, and human-machine interfaces. 4.2. Integration of system components using appropriate controller hardware and software such as PLC, PAC, and Microcontroller system; use of simulation software packages for pneumatic and hydraulic circuit design. <p>One of the followings as decided by hosting programme</p> <ol style="list-style-type: none"> 5. <u>(TM3014) Basic Scientific Computing with MATLAB</u> <ol style="list-style-type: none"> 5.1. Overview to scientific computing; introduction to MATLAB; interactive calculations, random number generators, variables, vectors, matrices and string; mathematical operations, polynomial operation, data analysis and curve fitting, file I/O functions. Basic 2D and 3D plots. 5.2. M-file programming & debugging; scripts, functions, logic operations, flow control, introduction to graphical user interface. 6. <u>(TM3300) Basic Scientific Computing with Python</u> <ol style="list-style-type: none"> 6.1. Basic data structures and data operations; script programming and debugging; logic operations, flow control and graphical user interfaces. 6.2. Use of functions and popular Python packages, such as Numpy, Panda and Matplotlib. 6.3. Data visualization by using graphics packages; such as basic plotting, formatting, 2D and 3D plots and modifying colormap.
Learning Methodology	The teaching and learning methods include lectures, workshop tutorials, and practical works. The lectures are aimed at providing students with an overall and concrete background knowledge required for understanding key issues in engineering communication, use of standard engineering components and systems, and importance of industrial safety. The workshop tutorials are aimed at enhancing students' in-depth knowledge and ability in applying the knowledge and skills to complete specific tasks. The practical works aim at facilitating students to review the diverse topics covered in this course and perform active learning with research, practice, questioning, and

	problem solving in a unified activity.

July 2021

Subject Description Form

Subject Code	EE2102C/IC2112
Subject Title	IC Training I (EE)
Credit Value	4 Training Credits
Level	2
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	<ol style="list-style-type: none"> 1) To provide trainees with simulated working environments and training of industrial practices in Electrical Engineering. 2) This subject covers a wide range of fundamental electrical engineering application technology that including electrical installation practice, lighting and electrical system design, LV switchboard and power monitoring, integral building system and basic electronic practice.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a) identify relevant engineering theories and principles and to apply them in hands-on training exercises to determine system feasibility; b) compare and contrast conceptual design, develop actual work sequences and methods for various electrical installations; c) recognize the engineering standards, regulations and practices to undertake the design, construction, testing and commissioning electrical distribution system in buildings. ; d) apply intelligent building control technology effectively and evaluate new building automation/intelligent control schemes; and e) apply their knowledge and skills for system analysis.

Subject Synopsis/ Indicative Syllabus	<p><u>(TM0367) Lighting and Electrical System Design</u> Interior lighting design and calculation; daylight illumination consideration; lumens and reflectors; T5, T8 and T11 lamps; energy conservation.</p> <p>Introduction of low-voltage power distribution system and code of practices of electrical design in Hong Kong; examine architectural drawings; design lighting and electrical services; prepare layout drawings and schematics.</p> <p><u>(TM0389) Low-voltage Switchboard and Power Monitoring, AC Control and PLC</u> Specifications, standards and requirements of LV switchboard; IDMTL and electronic protection relays; schematic diagram, testing, commissioning and maintenance.</p> <p>Power monitoring and analysis, noise and harmonics; active filters and real-time capacitor bank.</p> <p>Introduction of programmable controller systems, sensors, actuators, drives, timers, counters, ladder logic programming and testing.</p> <p><u>(TM0383) Integrated Building Systems</u> Proprietary and open systems (BMS, EIB and DALI); sensors and actuators; wiring circuit, scenes control; system design, programming and commissioning; intelligent building system integration.</p> <p><u>(TM0373) Electrical Installation and Basic Electronic Practice</u> Wiring for conventional low voltage installations and intelligent building control systems (EIB and DALI); final lighting and power circuits, control gears and protective devices; inspection, testing.</p> <p>Identification of electronic circuit components, soldering and de-soldering, Dry film process, Etching process.</p>
Learning Methodology	<p>The teaching and learning methods include lectures, workshop tutorials, and practical works to convey general principles, techniques and related technologies to students. Their learning knowledge will be strengthened through the practical exercises and case studies in a problem-based format for the development of system integration skills, and to effectively apply those on real world environments.</p>

Subject Description Form

Subject Code	EE3002C
Subject Title	Electromechanical Energy Conversion
Credit Value	3
Level	3
Pre-requisite/ Co-requisite/ Exclusion	Pre-requisite: EE2002C
Objectives	<ol style="list-style-type: none"> To provide students a general knowledge on common types of electric machines. To provide students the basic techniques of steady-state electric machine analysis.
Subject Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> Explain the construction, operating principles, performance characteristics, control and applications of transformers and major types of rotating electric machines. Analyse the steady-state performance of electric machines using appropriate equivalent circuit models. Operate practical electric machines and to conduct relevant tests and experiments. Present the results of electric machine studies in the form of tables, graphs, and written reports.
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> Introduction: Principles of motors and generators. Materials inside electric machines. Types of electric machines and applications. Losses and power efficiency. Machine rating: Temperature rise and cooling methods. Heating and cooling curves. Thermal ratings. Machine nameplate. Windings: Phase and commutator windings. Winding factors. E.M.F. equation. Harmonics. Production of rotating magnetic field. D.C. machines: Construction. E.M.F equation. Armature reaction and commutation. Characteristics of shunt, series and compound machines. Testing. Speed control. Universal motor. Brushless dc motor. Synchronous machines: Construction. Synchronous impedance. Voltage regulation. Synchronising. Performance on infinite busbars. Power/load angle relationship. Stability. Synchronous motor. Induction machines: Squirrel cage and wound-rotor types. Equivalent circuit. Torque-slip relationship. Starting, braking and generating. Testing. Speed control. Single-phase induction motors. <p>Laboratory Experiments: Load test, efficiency and speed control of a dc motor. Performance evaluation of a three-phase cage induction motor. Synchronous generator synchronization.</p>

Teaching/Learning Methodology	Delivery of the subject is mainly through formal lectures and complemented by tutorials. Excel programmes are used to clarify concepts of electric machines learnt and for conducting 'what-if' analysis. Laboratory work provides students hands-on experience in operation and control of practical machines, while report-writing enables students to practise written and graphic presentation skills.

Credit Value	3
Level	3
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	<ol style="list-style-type: none"> To understand the characteristics and operation of power electronics devices. To expose the students to the conversion and utilization of large amount of electrical power using latest power semiconductor devices and modern control techniques. To ensure the students develop an understanding of various drive systems.
Subject Intended Learning Outcomes	<p>Upon completion of the subject, students will:</p> <ol style="list-style-type: none"> Be able to explain major semiconductor devices that can be used as switches, and their electrical characteristics which include basic idealised models as well as extension to some important non-ideal characteristics both verbally and in written form. Be able to explain the processes of efficient energy conversion through the use of power semiconductor switches. Be able to apply the concepts of switching power conversion to analyse a variety of circuits including: <ol style="list-style-type: none"> DC to DC conversion AC to DC conversion DC to AC conversion Be able to present the results of study and experiments in the form of a technical report.
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> Power electronics fundamentals: Power conversion, energy balance principle, review of fundamentals. Power semiconductor devices: Diodes, power transistor, MOSFET, SCR, GTO, IGBT, switching characteristics. DC-DC converters: Buck, Boost and Buck-boost DC-DC converters, duty cycle controller, switched mode power supply. AC-DC rectifiers: Uncontrolled and controlled single-phase and three-phase rectifiers, terminal characteristics, supply and load interactions. DC/AC inverters: Basic single-phase bridge inverters, voltage and frequency control, harmonic reduction. Electric drive systems: Introduction to electric drives system, applications for conservation of energy, DC electric drives. <p>Laboratory Experiment: Buck DC-DC converter, Introduction to SCR circuits, OrCAD simulation of SCR bridge.</p>

Teaching/Learning Methodology	<p>Lectures and tutorials are effective teaching methods:</p> <ol style="list-style-type: none"> To provide an overview or outline of the subject. To introduce new concepts and knowledge to the students. To explain difficult ideas and concepts of the subject. To motivate and stimulate students interest. To provide students feedback in relation to their learning. To encourage students responsibility for their learning by extra reference books reading and computer-based circuit simulations. <p>Laboratory works is an essential ingredient of this subject:</p> <ol style="list-style-type: none"> To supplement the lecturing materials. To add real experience for the students. To provide deep understanding of the subject. To enable students to organise principle and challenge ideas.

July 2021

Subject Description Form

Subject Code	EE3009C
Subject Title	Electrical Services in Buildings
Credit Value	3
Level	3
Pre-requisite/ Co-requisite/ Exclusion	Pre-requisite: EE2002C
Objectives	<ol style="list-style-type: none"> To enable students to understand the major design features, operating characteristics and functions of electrical and electronic equipment used in building services. To enable students to implement technical data, regulations, standards and guidance notes prepared by statutory bodies in the design of reliable, safe and efficient electrical power distribution, lightning protection, vertical transportation, lighting and fire fighting systems in buildings.
Subject Intended Learning Outcomes	<p>Upon completion of the subject, students will:</p> <ol style="list-style-type: none"> Be able to plan efficient, safe and high quality distribution systems for domestic, commercial and industrial buildings. Be proficient to assess the suitability of different vertical transportation systems and fire fighting systems for buildings. Be able to design and evaluate the effectiveness of lightning protection systems. Be able to integrate the lighting requirements and operating characteristics of light sources to the design of interior lighting and exterior lighting. Be able to search for information in solving technical problems.
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> Power distribution in buildings: System planning. Incoming supply arrangement for domestic, commercial and industrial installations. Economics of HV/LV distributions. Tariffs, maximum demand, load factors and diversity. Earthing systems. Applications of standby generator sets and uninterruptible power supplies. Requirements for safe design: Overview of Supply Rules and Regulations. Electric shock, overcurrent and earth fault protection. Fuse, MCB, MCCB, ACB design and selection criteria. Co-ordination of protection systems. Cable and wiring systems design. Interference and power quality: Installation requirements, grouping, interference, noise suppression and power supply in communication systems. Electromagnetic compatibility. Harmonics and voltage dips issues. Lightning protection systems: Lightning phenomena. Estimation of exposure risk. Requirements for system components. Standards for protection of structures against lightning. Vertical transportation systems: Lift. Hoist and escalator drives. Safety requirements and drive characteristics. Grade of service and round trip time. Lighting: Characteristics of light sources. Classification of luminaries. Lighting control. Interior lighting design. Glare index calculation. Color rendering. Utilization of daylight. Exterior lighting design. Fire Fighting Systems: Outline, regulations, requirements and components of fire fighting systems. Fire sprinkler systems. Heat and smoke detector systems. Fire-fighting gases.

	<p>Case Study:</p> <ol style="list-style-type: none"> Distribution systems design for typical buildings in Hong Kong Applications of overcurrent and earth fault protection Co-ordination of various types of protective devices Electrical power quality issues in building services Lightning protection systems design Interior lighting and exterior lighting designs Fire protection for domestic, commercial and industrial buildings 																																																			
Teaching/Learning Methodology	<p>In lectures and tutorials, materials that emphasize practical problem-solving methods are balanced with materials that emphasize fundamental understanding. Students are expected to take initiative to learn through the process of engagement and participation in lectures and tutorial sessions. Practical designs used in industry, where appropriate, are discussed interactively in class. Mini-Projects are used to enhance students learning experiences and practical applications. They provide students with the opportunity to develop independent design/planning and technical report writing skills pertinent to the field of electrical services in buildings.</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th rowspan="2">Teaching/Learning Methodology</th> <th colspan="5">Outcomes</th> </tr> <tr> <th>a</th> <th>b</th> <th>c</th> <th>d</th> <th>e</th> </tr> </thead> <tbody> <tr> <td>Lectures</td> <td style="text-align: center;">✓</td> <td style="text-align: center;">✓</td> <td style="text-align: center;">✓</td> <td style="text-align: center;">✓</td> <td></td> </tr> <tr> <td>Tutorials</td> <td style="text-align: center;">✓</td> <td style="text-align: center;">✓</td> <td style="text-align: center;">✓</td> <td style="text-align: center;">✓</td> <td></td> </tr> <tr> <td>Mini-projects</td> <td style="text-align: center;">✓</td> <td style="text-align: center;">✓</td> <td style="text-align: center;">✓</td> <td style="text-align: center;">✓</td> <td style="text-align: center;">✓</td> </tr> </tbody> </table>					Teaching/Learning Methodology	Outcomes					a	b	c	d	e	Lectures	✓	✓	✓	✓		Tutorials	✓	✓	✓	✓		Mini-projects	✓	✓	✓	✓	✓

July 2021

Subject Description Form

Subject Code	ELC1007
Subject Title	University English for Higher Diploma Students I
Credit Value	3
Level	1
Pre-requisite / Co-requisite/ Exclusion	NIL
Objectives	This subject aims to help higher diploma students entering with HKDSE English Language Level 2 to study effectively in an English medium tertiary learning environment, and to acquire English skills to enable them to further their studies at university.
Intended Learning Outcomes	Upon successful completion of the subject, students will be able to: a. plan and write a text that effectively describes data b. plan and write a well-structured and coherent comparison and contrast text c. employ appropriate and effective verbal and non-verbal skills in oral presentations To achieve the above outcomes, students are expected to use language and text structure appropriate to the context, select information critically, and present information logically and coherently.
Subject Synopsis/ Indicative Syllabus	1. Written communication Analysing and practising common writing functions; improving the ability of writing topic sentences and concluding sentence; developing skills in descriptive writing description; employing appropriate strategies for paragraph development; understanding common patterns of organisation in writing; improving coherence and cohesion in writing; developing revision and proofreading skills. 2. Spoken communication Recognising the differences between spoken and written communication in English in university study contexts; identifying and practising verbal and non-verbal interaction strategies in oral presentations. 3. Language development Improving and extending relevant features of grammar, vocabulary and pronunciation; developing appropriate academic reading and listening skills.
Teaching/Learning Methodology	The study method is a combination of seminar, self-access work and online learning. Following a blended delivery approach, activities include teacher input as well as in- and out-of-class work and online learning. Students make use of elearning resources to further improve their proficiency and English skills. Learning materials developed by the English Language Centre are used throughout the course. Students will be referred to learning resources on the Internet and in the ELC's Centre for Independent Language Learning. Additional reference materials will be recommended as required.

Assessment Methods in Alignment with Intended Learning Outcomes <i>(Note 4)</i>	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)		
			a	b	c
	1. Writing a descriptive text	25%	✓		
	2. Writing an essay	30%		✓	
	3. Oral presentation	40%			✓
	4. Participation	5%	✓	✓	✓
Total	100%				
Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes: Assessment 1 demonstrates achievement of LO (a) for students to plan, write and revise a descriptive text. Assessment 2 necessitates achievement of LO (b) in order for students to write an accurate and coherent text. Assessment 3 requires students to demonstrate their achievement of LO (c). In addition to these assessments, students are required to complete further language training through web-based language work. The additional language training offered in online tasks is aligned with all the three LOs.

June 2021

Subject Description Form

Subject Code	ELC1011
Subject Title	Practical English for University Studies
Credit Value	3
Level	1
Pre-requisite / Co-requisite/ Exclusion	Nil
Objectives	This subject aims to develop and enhance students' general proficiency and communication skills in English. A strong focus will be given to enhancing competence and confidence in writing, grammar, vocabulary, pronunciation and fluency.
Intended Learning Outcomes	Upon successful completion of the subject, students will be able to: a. organise and write accurate and coherent short texts b. improve language accuracy and the ability to proofread for common errors in written texts c. use appropriate verbal and non-verbal skills to enhance fluency and accuracy in spoken communication such as short presentations To achieve the above outcomes, students are expected to use language and text structure appropriate to the context, select information critically, and present their views logically and coherently.
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> 1. Written communication Enhancing the use of accurate and appropriate grammatical structures and vocabulary for various communicative purposes; improving the ability to organise written texts logically; and improving cohesion and coherence in writing. 2. Spoken communication Developing verbal and non-verbal interaction strategies appropriate to the context and level of formality. 3. Reading and listening Understanding the content and structure of information delivered in written and spoken texts; developing effective reading and listening strategies. 4. Language development Improving and extending relevant features of grammar, vocabulary, pronunciation and fluency.
Teaching/Learning Methodology	The study method is primarily seminar-based. Following a blended delivery approach, activities include teacher input as well as in- and out-of-class individual and group work involving drafting of texts, information search, mini-presentations and discussions. Students will make use of elearning resources and web-based work to improve their grammar and vocabulary, and other language skills. Learning materials developed by the English Language Centre are used throughout the course. Students will be referred to learning resources on the Internet and in the ELC's Centre for Independent Language Learning. Additional reference materials will be recommended as required.

Assessment Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)		
			a	b	c
	1. Paragraph writing	20%	✓	✓	
	2. Essay writing	40%	✓	✓	
	3. Documentary presentation	40%	✓	✓	✓
Total	100 %				
Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes: The paragraph writing test, which assess students' grammar, vocabulary and paragraph organization skills, necessitates achievement of LOs (a) and (b). The essay writing assessment evaluates students' ability write a longer text in accurate and appropriate grammatical structures (ref. LOs (a) and (b)). The documentary presentation assesses students' ability to speak accurately, appropriately and confidently. Students will research a topic, organise information from a variety of sources, and deliver the information as a digital documentary and mini-presentation (ref. LOs (a), (b) and (c)). In addition to these assessments, students are required to complete further language training through web-based language work. The additional language training offered in online tasks is aligned with all the three LOs and corresponds to their learning in class.					
Student Study Effort Expected	Class contact:				
	▪ Seminar		39 Hrs.		
	Other student study effort:				
	▪ Self-study/preparation		78 Hrs.		
Total student study effort			117 Hrs.

June 2021

Subject Description Form

Subject Code	ELC1012/ELC1013
Subject Title	English for University Studies (This subject will be offered in two versions for students who will primarily be using (1) APA/Harvard referencing styles or (2) IEEE/Vancouver referencing styles in their university studies.)
Credit Value	3
Level	1
Pre-requisite / Co-requisite/ Exclusion	Students entering the University with Level 3-5** from the HKDSE will be required to take this course.
Objectives	This subject aims to help students study effectively in the University's English medium learning environment, and to improve and develop their English language proficiency within a framework of university study contexts.
Intended Learning Outcomes	Upon successful completion of the subject, students will be able to: a. refer to sources in written texts and oral presentations b. paraphrase and summarise materials from written and spoken sources c. plan, write and revise expository essays with references to sources d. deliver effective oral presentations To achieve the above outcomes, students are expected to use language and text structure appropriate to the context, select information critically, and present information logically and coherently.
Subject Synopsis/ Indicative Syllabus	1. Written communication Analysing and practising common writing functions; improving the ability of writing topic sentences and strategies for paragraph development; understanding common patterns of organisation in expository writing; taking notes from written and spoken sources; practising summarising and paraphrasing skills; improving coherence and cohesion in writing; developing revision and proofreading skills. 2. Spoken communication Recognising the purposes of and differences between spoken and written communication in English in university study contexts; identifying and practising the verbal and non-verbal interaction strategies in oral presentations; developing and applying critical thinking skills to discussions of issues. 3. Language development Improving and extending relevant features of grammar, vocabulary and pronunciation.
Teaching/Learning Methodology	The study method is primarily seminar-based. Following a blended delivery approach, activities include teacher input as well as in- and out-of-class individual and group work involving drafting and evaluating texts, mini-presentations, discussions and simulations. The process approach to writing is adopted, and students make use of learning resources to engage in academic discussions and to reflect on their learning. Learning materials developed by the English Language Centre are used throughout the course. Students will be referred to learning resources on the Internet and in the ELC's

Centre for Independent Language Learning. Additional reference materials will be recommended as required.						
Assessment Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)			
			a	b	c	d
	1. Academic essay 1	30%	✓	✓	✓	
	2. Academic essay 2	30%	✓	✓	✓	
	3. Oral presentation	40%	✓	✓		✓
Total	100 %					
Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes: Assessments 1 and 2 necessitate achievement of LOs (a), (b) and (c) in order to write an effective academic essay via the process of extending and improving the essay for assessment 1. In order for students to present an effective academic oral presentation, as demanded in assessment 3, they will need to read, note and synthesise from a variety of sources, and refer to those sources in their presentation (ref. LOs (a), (b) and (d)). In addition to these assessments, students are required to complete further language training, through web-based language work, reading tasks and online reflections. The additional language training offered in online tasks is aligned with all the four LOs. In some of the tasks, students to critically read and summarise information contained in a variety of sources, as required in LOs (a) and (b).

June 2021

Subject Description Form

Subject Code	ELC2011
Subject Title	Advanced English Reading and Writing Skills
Credit Value	3
Level	2
Pre-requisite / Co-requisite	Pre-requisite: ELC1012 / ELC1013 English for University Studies
Objectives	This subject aims to help students become more effective readers and writers. It focuses on developing students' facility to read a variety of texts in a critical manner, both intensively and extensively; and to write texts that demonstrate knowledge and insight.
Intended Learning Outcomes	Upon successful completion of the subject, students will be able to examine a variety of texts, including literary texts, and: <ul style="list-style-type: none"> a. reflect on and critically analyze texts of different genres and styles, identifying the writer's aims and stance b. identify and evaluate language used to make claims and support these with valid arguments c. write a text on a chosen topic that includes their opinion and interpretation of some key issues and demonstrates critical thinking and creativity
Subject Synopsis / Indicative Syllabus	<p>Reading strategies Reading extensively to appreciate the use of language, acquire information, promote understanding, and develop empathy. Reading intensively to investigate a particular topic and develop an in-depth understanding of issues and stances. Reading critically to extract implications, identify writers' assumptions and purposes, and analyze issues raised in texts written from different perspectives.</p> <p>Writing strategies Describing and analyzing the structure, meaning and characteristics of a variety of texts. Presenting views and arguments to educated readers with sophisticated language and appropriate visual images and formats.</p>
Teaching/Learning Methodology	<p>The study method is primarily seminar-based. Following a blended learning approach, activities include teacher input as well as in- and out-of-class work involving sharing and discussion of reading experiences; and reading, evaluating and drafting texts. The process approach to writing is adopted, and students make use of e-learning resources to engage in discussions and to reflect on their learning.</p> <p>Learning materials developed by the English Language Centre are used throughout the course. Students will be referred to learning resources on the Internet and in the ELC's Centre for Independent Language Learning. Additional reference materials will be recommended as required.</p>

Assessment Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)		
			a	b	c
	1. Analyzing genres of writing	30%	✓	✓	
	2. Reflective writing	30%	✓		
	3. Feature article writing	40%			✓
	Total	100%			
<p>Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes:</p> <p>Assessment 1 requires students to employ effective critical reading and thinking skills to interpret texts, identify the writer's style and stance, and evaluate the choice of language used; and is aligned with ILOs (a) and (b). Assessment 2 requires students to write a reflection after reading a range of literary genres and sharing their ideas in class; and is aligned with ILO (a). Assessment 3 requires students to first conduct research and gain some insight into a particular topic, then produce an article which can inform and impress readers through its substance, structure and language; and is aligned with ILO (c). Through these assessments, students will be able to develop and demonstrate more advanced reading and writing skills.</p>

Subject Description Form

Subject Code	ELC2012		
Subject Title	Persuasive Communication		
Credit Value	3		
Level	2		
Pre-requisite / Co-requisite/ Exclusion	Pre-requisite: ELC1012 or ELC1013 English for University Studies		
Objectives	This subject aims to help students become more persuasive communicators in a variety of contexts that they may encounter at university and in the workplace.		
Intended Learning Outcomes (Note 1)	<p>By the end of the subject, students should be able to communicate effectively in an English-medium environment through:</p> <p>a) writing persuasive texts intended for a variety of audiences b) communicating persuasively in oral contexts c) making persuasive arguments in formal discussions</p> <p>To achieve these, students are expected to use language and text structure appropriate to the context, select information critically, and present and support stance and opinion.</p>		
Subject Synopsis/ Indicative Syllabus (Note 2)	<p>1. Preparing for effective persuasion Assessing the situation; selecting relevant content; organising ideas and information; selecting an appropriate tone, distance and level of formality to support the communication of messages.</p> <p>2. Persuasion through writing Developing and practising appropriate language, tone, style and structure; achieving cohesion and coherence.</p> <p>3. Persuasion through speaking Developing and practising appropriate verbal and non-verbal skills for persuasive oral communication; improving and extending relevant pronunciation features, including articulation, pausing, intonation, word stress and sentence stress.</p>		
Teaching/Learning Methodology (Note 3)	<p>The study method is primarily seminar-based. Activities include teacher input as well as individual and group work involving reading and appreciating texts, discussions and presentations of ideas.</p> <p>Learning materials developed by the English Language Centre are used throughout the course. Students will be referred to learning resources on the Internet and in the ELC's Centre for Independent Language Learning. Additional reference materials will be recommended as required.</p>

June 2021

Subject Description Form

Subject Code	ELC2013
Subject Title	English in Literature and Film
Credit Value	3
Level	2
Pre-requisite / Co-requisite/ Exclusion	Pre-requisite: English for University Studies (ELC1012/1013)
Objectives	<p>This subject aims to introduce students to a range of literary genres in English as well as to enable them to consider differences in media representations of genres, and to appreciate and negotiate the meanings of a variety of literary texts.</p> <p>It is also intended that the subject will help students further develop literacy, as well as higher order thinking and life-long learning skills.</p>
Intended Learning Outcomes	<p>Upon successful completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> examine and analyse literary texts from different perspectives discuss literary techniques employed by writers appreciate and articulate differences in textual and visual media representations <p>To achieve the above outcomes, students are expected to use language and text structure appropriate to the context, select information critically, and present and support stance and opinion.</p>
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> Written communication Describing and interpreting content and language in literary texts; employing appropriate grammatical structures and vocabulary. Spoken communication Presenting critical evaluation of literary works effectively and convincingly. Reading Developing understanding of and competence in using literary devices such as metaphor, simile and symbolism, via reading literary texts and viewing film versions. Language development Improving fluency and pronunciation, and extending grammatical and lexical competence.
Teaching/Learning Methodology	<p>The study method is primarily seminar-based. Following a blended delivery approach, activities include teacher input as well as in- and out-of-class individual and group work involving listening to and viewing a variety of audio-visual sources, reading and drafting texts, conducting internet research, making mini-presentations, participating in discussions, and comparing various representations of literature. Students will make use of elearning resources and web-based work to further improve their English literacy skills.</p> <p>Learning materials developed by the English Language Centre are used throughout the course. Students will be referred to learning resources on the Internet and in the ELC's Centre for Independent Language Learning. Additional reference materials will be recommended as required.</p>

Assessment Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)		
			a	b	c
	1. Individual Essay	40%	✓	✓	✓
	2. Group Presentation	30%	✓	✓	✓
	3. Individual Project	30%	✓	✓	✓
	Total	100 %			
<p>Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes:</p> <p>In assessment 1, students are required to write an individual paper in which they critically reflect on their reading of prose, and by so doing, demonstrate their achievement of LO (a). Assessments 2 and 3 are aligned with all three LOs. Assessment 2 assesses students' understanding of a literary drama and requires comparison of the merits of its textual and theatrical versions. Assessment 3 is an individual project that requires interpretation and presentation of more creative literature and audio-visual sources.</p>					
Student Study Effort Expected	Class contact:

June 2021

Subject Description Form

Subject Code	ELC2014
Subject Title	Advanced English for University Studies
Credit Value	3
Level	2
Pre-requisite/ Co-requisite/ Exclusion	Pre-requisite: English for University Studies (ELC1012/ELC1013) (unless exempted)
Objectives	This subject aims to help students study effectively in the University's English medium learning environment, and to improve and develop their English language proficiency within a framework of university study contexts.
Intended Learning Outcomes	Upon successful completion of the subject, students will be able to: a. research relevant academic texts for a topic and integrate the sources into a position argument essay appropriately and effectively; b. plan, research for, write and revise a position argument essay; and c. present and justify views effectively in a mini oral defence. To achieve the above outcomes, students are expected to use language and text structure appropriate to the context, select information critically, and present and support stance and opinion logically and persuasively.
Subject Synopsis/ Indicative Syllabus	1. Written communication Developing logical and persuasive arguments; applying a variety of organisation patterns in discursive writing, including the writing of explanatory and evaluative texts; selecting information from academic texts critically; supporting stance; maintaining cohesion and coherence in discursive writing; achieving appropriate style and tone. 2. Spoken communication Enhancing and practising the specific oral and aural skills required to participate effectively in an academic discussion and to present and justify views in an oral defence. 3. Reading and listening Understanding the content and structure of information in oral and written texts; comprehending, inferring and evaluating messages and attitude. 4. Language development Improving and extending relevant features of grammar, vocabulary and pronunciation.
Teaching/Learning Methodology	The study method is primarily seminar-based. Following a blended delivery approach, activities include teacher input as well as in- and out-of-class individual and group work involving drafting and evaluating texts, mini-presentations, discussions and simulations. The process approach to writing is adopted, and students make use of elearning resources to engage in academic discussions and to reflect on their learning. Learning materials developed by the English Language Centre are used throughout the course. Students will be referred to learning resources on the Internet and in the ELC's Centre for Independent Language Learning. Additional reference materials will be recommended as required.

Assessment Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)		
			a	b	c
	1. Position Argument Essay (draft)	20%	✓	✓	
	2. Academic Presentation & discussion	35%	✓		✓
	3. Position Argument Essay (final)	45%	✓	✓	
Total	100 %				
Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes: Assessments 1 and 3 assess students' abilities to produce a coherent academic text which requires research, and effective use and referencing of sources (ref. LOs (a) and (b)). Assessment 2 assesses their abilities to plan, present and justify their views in an oral defence (ref. LOs (a) and (c)). In addition to their assessments, students complete further language training by carrying out academic research and by completing a variety of independent-learning tasks focussing on grammar and academic skills such as paraphrasing and discussion strategies.

June 2021

Subject Description Form

Subject Code	ENG2002
Subject Title	Computer Programming
Credit Value	3
Level	2
Pre-requisite / Co-requisite / Exclusion	Nil
Objectives	<ol style="list-style-type: none"> 1. To introduce the fundamental concepts of computer programming 2. To equip students with sound skills in C/C++ programming language 3. To equip students with techniques for developing structured and object-oriented computer programs 4. To demonstrate the techniques for implementing engineering applications using computer programs.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Familiarize themselves with at least one C/C++ programming environment. b. Be proficient in using the basic constructs of C/C++ to develop a computer program. c. Develop a structured and documented computer program. d. Understand the fundamentals of object-oriented programming and be able to apply it in computer program development. e. Apply computer programming techniques to solve practical engineering problems.
Subject Synopsis/ Indicative Syllabus	<p>Syllabus:</p> <ol style="list-style-type: none"> 1. Introduction to programming - Components of a computer; Programming environment; Process of application development. 2. Bolts and Nuts of C/C++ - Preprocessor; Program code; Functions; Comments; Variables and constants; Expressions and statements; Operators. 3. Program Flow Control - Branching and looping; Function parameters passing; Return values; Local and global variables; Scope of variables. 4. Program Design and Debugging - Structured program design; Debugging a program. Case study: Using the Visual C++ debugger. 5. Basic Object Oriented Programming - Objects and classes; Private versus public; Implementing class methods; Constructors and destructors. 6. Pointer and Array - Stack and Free store; Create and delete objects in the free store; Pointer arithmetic; Passing function arguments by pointer; Returning values by pointer; Array of objects; Array and pointer; Array of pointers; Pointer of array; Character array; Command-line processing. 7. Stream I/O - Input and output as streams; File I/O using streams.

Teaching/Learning Methodology	Teaching and Learning Method	Intended Subject Learning Outcome	Remarks
	Lectures, supplemented with short quizzes	b,c,d	Students are introduced to the knowledge of computer programming through explanation and illustrative examples. Comprehension of the knowledge is strengthened with short quizzes. Students will be able to monitor the skills of using C/C++ and apply the techniques of developing structured object-oriented applications.
	Laboratories/tutorials where problems are given to students for them to solve	a,b,c,d	Students apply what they have learnt in lectures and solve problems in exercises. The purpose is to ensure students have captured the important points. Tutors will aid the lecturer in helping the students finishing the exercises, and interactive Q&A will take place.
	Assignment, tests and final examination	a,b,c,d,e	By doing assignment, students will develop a firm understanding and comprehension of the knowledge taught. They will analyse given C/C++ applications and apply knowledge to solve problems. They will have to design solutions by evaluating different alternatives. To enhance the students' problem solving skill in a given programming environment, open-book programming tests are arranged regularly. To assure students' understanding of fundamental concepts, a closed-book final examination is arranged.

Assessment Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed				
			a	b	c	d	e
	1. In-class exercises	10%	✓	✓	✓	✓	
2. Short-quizzes	10%		✓	✓	✓		
3. Programming tests	30%	✓	✓	✓	✓	✓	
4. Assignment	20%	✓	✓	✓	✓	✓	
5. Final examination	30%	✓	✓	✓	✓	✓	
Total	100%						
<p>Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes:</p> <p>The short-quizzes are for assessing the understanding of fundamental concepts. The in-class exercises are conducted to help students familiarized with the programming language and skills. The programming tests are for assessing the ability of students on solving computer problems through programming within a specified period. Through doing assignment, students will be able to experience how to solve computer problems and design solutions by using a systematic approach. The final examination is for assessing the students' ability on using the programming language and analysing computer programs.</p>
