

## Subject Description Form

|   |  |
|---|--|
| <b>Subject Code</b>                                   | EE530  |
| <b>Subject Title</b>                                  | Electrical Energy Saving Systems   |
| <b>Credit Value</b>                                   | 3  |
| <b>Level</b>  | 5  |
| <b>Pre-requisite/<br/>Co-requisite/<br/>Exclusion</b> | Nil  |
| <b>Objectives</b>                                     | <ol style="list-style-type: none"> <li>1. To enable students to establish a broad concept on energy saving using techniques of electrical engineering.</li> <li>2. To provide an in-depth knowledge on selected topics of energy-saving systems in electrical engineering.</li> <li>3. To enable students to describe typical energy storage systems, its associated issues of grid connection and related technical considerations.</li> <li>4. To enable students to describe the potential of solar energy and characteristics &amp; performance of various describe solar energy systems.</li> <li>5. To enable students to describe various techniques and systems for control and monitoring of energy saving, as well as the related communication protocol and interfacing requirements.</li> <li>6. To enable students to describe control gears for lighting systems and variable speed drives for HVAC systems &amp; elevators.</li> </ol>  |
| <b>Intended Learning Outcomes</b>                     | <p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> <li>a. Describe the operation principle &amp; control strategy of various energy storage systems and topologies of these systems and identify their benefits &amp; impacts.</li> <li>b. Describe the principle and characteristics of various solar energy devices, and identify the potentials of solar energy. Calculate available solar irradiation for a given location.</li> <li>c. Describe the operation principle and characteristics of typical control and monitoring systems for energy saving, including the communication protocols.</li> <li>d. Identify different energy saving control for industrial plants and multi-storey buildings, including giving examples.</li> <li>e. Describe the operation principle and characteristics of typical control gear for lighting and variables speed drives.</li> <li>f. Given a technical topic, carry out literature search and report the findings in a presentation and be able to work and communicate effectively in a team setting.</li> </ol> |
| <b>Subject Synopsis/<br/>Indicative Syllabus</b>      | <ol style="list-style-type: none"> <li>1. <b>Energy storage systems:</b> Utility Load Factor, peak lopping and valley filling, energy storage systems, battery energy storage, super-capacitor, power electronics topologies, control strategy, grid connection, voltage support, power quality improvement, environmental impact, improvement of utility energy efficiencies.</li> <li>2. <b>Solar energy utilization:</b> Solar irradiation on earth, potentials of solar energy, solar thermal system systems, photovoltaic systems, characteristics and performance of typical BIPV systems and estimation of its energy output, distributed power generation, passive solar devices on buildings for energy saving, and case study.</li> <li>3. <b>Energy saving control and monitoring systems:</b> Theory of energy saving, concept of building energy efficiency, control and monitoring systems and energy saving in electrical distribution systems of buildings. Application examples.</li> </ol>   |

|   | <p>4. <b>Lighting, ballast, and variable speed drives:</b> Magnetic ballast, electronic ballast, lighting design, fluorescent, LED and HID lamps, variable speed drives for HVAC systems and elevators, energy storage and regeneration for elevators, harmonics implications.</p> <p><b>Laboratory Experiments, Seminars, Site Visits:</b><br/>Demonstration on operating principles of some selected energy-saving systems.</p> <p><b>Case study:</b><br/>Selections of practical real life energy-saving systems in Hong Kong.</p>   |   |   |   |   |   |  |                                   |             |   |  |  |  |  |   |   |   |   |   |   |          |                |     |   |   |   |   |           |   |               |     |   |   |   |              |   |  |               |     |   |   |   |   |   |  |                                  |     |   |   |   |   |   |   |       |      |  |  |  |  |  |  |

| <p><b>Teaching/Learning Methodology</b></p>                                   | <p>Lectures and tutorials are the primary means of conveying the basic concepts and theories. Practical experiences on power electronics design, energy saving and applications are given through mini-projects. Mini-projects are given in the beginning of the study. Students are encouraged to form group to jointly investigate an industrial problem and they have to present the projects in front of the class.</p> <table border="1" data-bbox="432 645 1457 913"> <thead> <tr> <th rowspan="2">Teaching/Learning Methodology</th> <th colspan="6">Outcomes</th> </tr> <tr> <th>a</th> <th>b</th> <th>c</th> <th>d</th> <th>e</th> <th>f</th> </tr> </thead> <tbody> <tr> <td>Lectures</td> <td>✓</td> <td>✓</td> <td>✓</td> <td>✓</td> <td>✓</td> <td></td> </tr> <tr> <td>Tutorials</td> <td>✓</td> <td>✓</td> <td>✓</td> <td>✓</td> <td>✓</td> <td></td> </tr> <tr> <td>Mini-project</td> <td></td> <td></td> <td></td> <td></td> <td></td> <td>✓</td> </tr> </tbody> </table>  |   |   |   |   |   |  | Teaching/Learning Methodology     | Outcomes    |   |  |  |  |  | a | b | c | d | e | f | Lectures | ✓              | ✓   | ✓ | ✓ | ✓ |   | Tutorials | ✓ | ✓             | ✓   | ✓ | ✓ |   | Mini-project |   |  |               |     |   | ✓ |   |   |   |  |                                  |     |   |   |   |   |   |   |       |      |  |  |  |  |  |  |
