

SUBJECT DESCRIPTION FORMS

Core / Compulsory Subjects

for

MSc in Electrical Engineering

<u>Subjects Code</u>	<u>Subject Title</u>
EE501	Alternative Energy Technologies
EE502	Modern Protection Methods
EE505	Power System Control and Operation
EE509	High Voltage Engineering
EE510	Electrical Traction Engineering
EE512	Electric Vehicles
EE514	Real Time Computing
EE520	Intelligent Motion Systems
EE521	Industrial Power Electronics
EE522	Optical Fibre Systems
EE524	Open Electricity Market Operation
EE526	Power System Analysis and Dynamics
EE528	System Modelling and Optimal Control
EE530	Electrical Energy Saving Systems
EE533	Railway Power Supply Systems
EE535	Maintenance and Reliability Engineering
EE536	Signalling and Train Control Systems
EE537	Railway Vehicles
EE5381	System Assurance and Safety in Railways
EE539	Aerospace Power Electronics and Actuation Systems
EE545	Modern Generation and Grid Integration Technologies
EE546	Electric Energy Storage and New Energy Sources for Electric Vehicles
EE547	Electric Vehicle Charging Systems
EE548	Advanced Electric Vehicle Technology
EE549	Modern Sensor Technology
EE550	Enterprise Risk and Asset Management
EE552	High Speed Rail
EE553	Railway Electronic Systems
EE560	Metros in Hong Kong and China
EE570	Design and Analysis of Smart Grids

Subject Description Form

Subject Code	EE501
Subject Title	Alternative Energy Technologies
Credit Value	3
Level	5
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	<ol style="list-style-type: none"> 1. To enable students to establish a broad concept on alternative energy techniques in engineering. 2. To provide an in-depth knowledge on selected topics of alternative energy systems in engineering. 3. To enable students to understand typical alternative energy technologies, its associated issues of application and related technical considerations. 4. To enable students to understand the potential of alternative energy and characteristics & performance of various types of alternative energy systems. 5. To enable students to understand various techniques and systems for control and monitoring of alternative energy technologies, as well as the related communication protocol and interfacing requirements.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Describe the operation principle & control strategy of various alternative energy systems and topologies of these systems. b. Identify benefits & impacts of the applications of these alternative energy systems; such as their effects on environment and utility energy efficiencies. c. Describe the operation principle, characteristics and performance of various alternative energy devices/systems. d. Identify different alternative energy technologies for industrial & commercial plants and multi-storey buildings, including giving examples. e. Able to carry out literature search and report the findings in a presentation, when given a technical topic.
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> 1. Energy resources and types: Renewable and non-renewable energy resources. World potential and trends. Environmental effects. Alternative energy types and present developments. Role and importance of alternative energy. 2. Wind and solar energy: Wind characteristics. Extraction characteristics. Windmill aerodynamics. Design and materials of windmills. Wind turbines. Types of wind turbines and connection. Siting and designs. Wind farms. Case study. On-shore and off-shore wind farms. Solar characteristics. Solar cells and solar thermal power. Photovoltaic conversion systems. Case study. Design and monitoring techniques. New developments. 3. Wave and tidal energy: Wave and tide characteristics for energy extraction. Tidal schemes. Tidal sites. Single and multiple basin schemes. Case study. Wave energy schemes. Case study. Ocean energy conversion. 4. Geothermal energy and fuel cells: Geothermal energy sources and methods. Characteristics. Hot dry rock technology. Case study. Fuel cells types and principles. Biomass energy types and case study. Future potentials. 5. Co-generation and combine-cycle plants: New technologies for co-generation and CCGT. Efficiency and environmental benefits. Case study examples. Future development potentials. 6. Better utilization of energy resources: Pollution reduction techniques and emission trading mechanisms and practices around the world. Clean coal technologies. Nuclear power. Environmental impacts of better utilization of energy.

Teaching/Learning Methodology	<p><u>Lectures and tutorials are effective teaching methods:</u></p> <ol style="list-style-type: none"> To provide an overview or outline of the subject contents. To introduce new concepts and knowledge to the students. To explain difficult ideas and concepts of the subject. To allow students to feedback on aspects related to their learning. <p><u>Mini-project works/Assignments are essential ingredients of this subject:</u></p> <ol style="list-style-type: none"> To supplement the lecturing materials. To add real experience for the students. To provide deeper understanding of the subject. To enable students to organise principles and challenge ideas. <p>Seminars from industrial experts may also be arranged, this will give student up-to-date status of the development in alternative energy area, as well as market trends.</p> <table border="1" data-bbox="432 517 1455 689"> <thead> <tr> <th rowspan="2">Teaching/Learning Methodology</th> <th colspan="5">Outcomes</th> </tr> <tr> <th>a</th> <th>b</th> <th>c</th> <th>d</th> <th>e</th> </tr> </thead> <tbody> <tr> <td>Lectures</td> <td>√</td> <td>√</td> <td>√</td> <td></td> <td></td> </tr> <tr> <td>Tutorials</td> <td>√</td> <td>√</td> <td>√</td> <td></td> <td></td> </tr> <tr> <td>Mini-project/Assignments/Presentations</td> <td></td> <td></td> <td></td> <td>√</td> <td>√</td> </tr> </tbody> </table>					Teaching/Learning Methodology	Outcomes					a	b	c	d	e	Lectures	√	√	√			Tutorials	√	√	√			Mini-project/Assignments/Presentations				√	√

Subject Description Form

Subject Code	EE502
Subject Title	Modern Protection Methods
Credit Value	3
Level	5
Pre-requisite/ Co-requisite/ Exclusion	Student should have some prior knowledge in Power Transmission and Distribution
Objectives	<ol style="list-style-type: none"> 1. To introduce the concept of modern power system protection to students. 2. To integrate theory and practical knowledge of power system protection. 3. To understand the design philosophy and working principle of power system protection. 4. To master the analytical techniques. 5. To apply protective relaying in power systems.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Master the concept and philosophy on power system protection. b. Apply and adapt applications of mathematics, engineering skills in the analysis, comparison, interpretation of various protection schemes in power systems. c. Integrate and justify techniques to be used in the planning and operation of power system protection. d. Solve technical problems for power system protection. e. Present technical results in the form of a technical report.
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> 1. Overview of protection system and its development: General considerations. Components of protection. Structure of protective relays. Unit protection and non-unit protection. Trend of protection development. 2. Fault and transient in power systems: Fault transient behaviour in power systems. Computer simulations of the transient behaviour in power systems. 3. Current and voltage transducers: Sources of errors. Requirements of transducers for measurement and protection. Their features and characteristics under steady state and transient conditions. 4. Protection systems for distribution networks: Protection criteria for distribution systems. Features of directional and non-directional protection schemes for distribution systems. 5. Protection systems for transmission networks: Distance protection system and characteristics. Differential line protection. Phase comparison line protection. Use of line carrier and communication for protection systems. 6. Busbar, transformer and generator protection systems: High impedance and low impedance differential protection schemes. Protection schemes for busbar, transformer, and generator. 7. Digital protection relaying technique: Features of digital protection relay. Digital relay architecture. Digital relaying algorithms. Adaptive and intelligent relays. Recent development.

Teaching/Learning Methodology	<p>Lectures and tutorials are the primary means of conveying the basic concepts and theories. Knowledge on system analysis, design and practical applications are given through case studies, in which students are expected to integrate and justify modern techniques to be used in the planning and operation of power system protection with critical and analytical thinking. Mini-projects and experiments are designed to supplement the lecturing materials so that students are encouraged to take extra readings and to look for relevant information.</p> <table border="1" data-bbox="432 383 1461 613"> <thead> <tr> <th rowspan="2">Teaching/Learning Methodology</th> <th colspan="5">Outcomes</th> </tr> <tr> <th>a</th> <th>b</th> <th>c</th> <th>d</th> <th>e</th> </tr> </thead> <tbody> <tr> <td>Lectures</td> <td>√</td> <td>√</td> <td></td> <td>√</td> <td></td> </tr> <tr> <td>Tutorials</td> <td>√</td> <td>√</td> <td></td> <td>√</td> <td></td> </tr> <tr> <td>Mini-projects and experiments</td> <td></td> <td>√</td> <td>√</td> <td></td> <td>√</td> </tr> </tbody> </table>					Teaching/Learning Methodology	Outcomes					a	b	c	d	e	Lectures	√	√		√		Tutorials	√	√		√		Mini-projects and experiments		√	√		√

Subject Description Form

Subject Code	EE505
Subject Title	Power System Control and Operation
Credit Value	3
Level	5
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	<ol style="list-style-type: none"> 1. To introduce the concept of modern power system control & operation to students; 2. To integrate theory and practical knowledge of power system control & operation; 3. To understand the working principle of power system control and operation; 4. To apply the theory in power system control & operation; and 5. To understand the industrial practice and tools used in power system control and operations
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Ability to analyse power system security control & operation; b. Ability to analyse interconnected power system interchange and economic operation. c. Ability to analyse power system computer control and applications; d. Understand the functionalities and able to use to appropriate level of competence of selected specialty software for power system control and operation purpose; e. To be aware of new technologies development trends and environmental impacts of modern power system control and operation techniques; and f. Ability to write technical reports and present the findings through individual effort as well as team work
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> 1. Power system operational security and dispatch: Power system security concepts. Contingency analysis. Static and dynamic security. States of operation. Prevention of blackouts. Power system state estimation concepts. Application of state estimation. 2. Unit commitment and economic dispatch: Priority lists. Methodologies for large system economic dispatch and unit commitment. Programming methods. 3. Frequency and voltage control: Frequency and voltage control concepts. Control loops and analysis. Automatic generation control (AGC) concepts, methodology and implementation. 4. Interconnected systems operation: System interconnection merits and problems. Economic interchange and control. Multi-area operation. 5. Energy management and real-time control: Energy management systems. Software systems. Computer hardware resources and configurations. Data management. Communication and distributed computing. Load forecasting. Contingency and security assessment. System restoration and emergency control concepts. <p>Case Study:</p> <ol style="list-style-type: none"> 1. Local system control centre arrangement. 2. Case study of past system blackout in overseas countries. 3. AGC and voltage control case studies. 4. Power system developments in HK and China as well as overseas countries. 5. Applications of computer technology in power system control and monitoring

Teaching/Learning Methodology	<p>Lectures and tutorials are the primary means of conveying the basic concepts and theories. Experiences on real world cases and associated analysis are given through case studies, in which the students are expected to power system control and operation problems with real-life constraints and to attain pragmatic solutions with critical and analytical thinking. Guest lecture / industrial seminars will be given to provide hands-on experience and knowledge on this subject from industry practice. Mini-project is designed to supplement the lecturing materials so that the students are encouraged to take extra readings and practice specialty software tools for power system operation and control.</p> <table border="1" data-bbox="432 465 1455 723"> <thead> <tr> <th rowspan="2">Teaching/Learning Methodology</th> <th colspan="6">Outcomes</th> </tr> <tr> <th>a</th> <th>b</th> <th>c</th> <th>d</th> <th>e</th> <th>f</th> </tr> </thead> <tbody> <tr> <td>Lectures</td> <td>√</td> <td>√</td> <td>√</td> <td>√</td> <td></td> <td></td> </tr> <tr> <td>Tutorials</td> <td>√</td> <td>√</td> <td>√</td> <td>√</td> <td></td> <td></td> </tr> <tr> <td>Report</td> <td>√</td> <td>√</td> <td>√</td> <td>√</td> <td>√</td> <td>√</td> </tr> </tbody> </table>							Teaching/Learning Methodology	Outcomes						a	b	c	d	e	f	Lectures	√	√	√	√			Tutorials	√	√	√	√			Report	√	√	√	√	√	√

Subject Description Form

Subject Code	EE509
Subject Title	High Voltage Engineering
Credit Value	3
Level	5
Pre-requisite / Co-requisite / Exclusion	Nil
Collaboration Institute	HK Electric Institute
Objectives	To provide students with the knowledge and skills to understand the physical insights and analysis techniques of high voltage engineering, including the causes and manner of insulation failures as well as the challenges and problems encountered in the practice of high voltage equipment.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Describe the insulation breakdown mechanisms for identifying the failure phenomena of different insulation systems. b. Understand the principles and practices of high voltage equipment for realizing the pragmatic design and applications of high voltage equipment in the industry.
Subject Synopsis / Indicative Syllabus	<ol style="list-style-type: none"> 1. Introduction to Electrical Insulation: Electric fields; Dielectric breakdown; Electrical insulating materials; Industrial applications of electrical insulating materials. 2. Breakdown of Gaseous Insulation: Ionization processes; Townsend breakdown mechanism; Experimental determination of Townsend's ionization coefficients; Breakdown in electronegative gases; Streamer breakdown mechanism; Paschen's law; Corona discharges; Breakdown in non-uniform fields; Post-breakdown phenomena and applications; Vacuum insulation and breakdown. 3. Breakdown of Liquid Insulation: Breakdown in pure liquids and commercial liquids; Purification and breakdown test; Power law for commercial liquids. 4. Breakdown of Solid Insulation: Breakdown due to treeing, surface flashover, and surface tracking; Breakdown in composite insulation. 5. Partial Discharges & In-house Demonstration: Classification of partial discharges by origin; Principle of partial discharge measurements; Demonstration of state-of-the-art measuring equipment. 6. High Voltage Equipment for Power System Networks: Hierarchy of power system networks; Introduction to high voltage equipment and their general specifications. 7. Transmission Gas Insulated Switchgears: Design and busbar topologies; Layout and internal construction; Environmental, health, and safety precautions in handling SF₆ gas; Type and routine tests; Inspection before installation; Commissioning test and precautions; Typical incidents around the world. 8. High Voltage Cables: Basic high voltage cable technology; Dielectric properties; Types and constructions; Type, routine, and diagnostic tests; Health index; Water tree formation; Accessory design, operations, and maintenance considerations; Reliability reviews and failure analysis; Faulty joint dissections and lessons learned. 9. Visit HK Electric: Introduction to transmission and distribution facilities; Demonstration of transmission gas insulated switchgears and relevant high voltage test equipment used in the power industry.

Teaching / Learning Methodology	Lectures are the primary means of conveying the knowledge and skills to understand the physical insights and analysis techniques of high voltage engineering. In-house Demonstration and Visit HK Electric are the complementary means of providing real-life experience on the pragmatic design and applications of high voltage engineering in the industry. Students are expected to solve design problems with real-life constraints and to attain pragmatic solutions with critical and analytical thinking.			
	Teaching/Learning Methodology		Outcomes	
	Lectures	✓	✓	
	In-house Demonstration	✓		
	Visit HK Electric		✓	
Assessment Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks	% weighting	Intended learning outcomes to be assessed	
	1. Examination	60%	✓	✓
	2. Continuous Assessment	40%	✓	✓
	Assignments (Insulation breakdown)		✓	
	Assignments (High voltage equipment)			✓
	Log (In-house demonstration)		✓	
	Log (Visit HK Electric)			✓
	Total	100%		
	The assessment methods include: Examination (60%) and Continuous Assessment (40%), both in alignment with intended learning outcomes a and b. Examination (60%) is in form of a three-hour, closed-book, end-of-subject written examination. Continuous Assessment (40%) consists of assignments (32%) and logs (8%) which, in turn, are after-class exercises for lectures on Insulation Breakdown (16%) and High Voltage Equipment (16%) and records of practical learning for In-house Demonstration (4%) and Visit HK Electric (4%), respectively.

Subject Description Form

Subject Code	EE510
Subject Title	Electrical Traction Engineering
Credit Value	3
Level	5
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	<ol style="list-style-type: none"> 1. To provide students with a comprehensive understanding of traction systems from an engineering viewpoint, with emphasis on the applications to railways. 2. To provide students with an appreciation of the current state-of-the-art design and applications of electric drives. 3. To enable students to understand the implications of design of traction systems for railway applications. 4. To introduce the quality indicators of railway operations and their relationships with the performance of traction drives and traction power supply systems. 5. To identify the necessary future technologies to improve the service quality in railway from the perspectives of traction drives and traction power supply systems.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Analyse the operation principles of the sub-systems in an electrified railway system with the state-of-the-art approaches and critically review their advantages and limitations with reference to operating railway lines. b. Identify the railway service quality parameters and evaluate the impact of the performance of the sub-systems to the overall system reliability, availability, safety and maintainability. c. Recognise the importance to engage in self-learning on latest technologies on railway systems at this advanced level of study.
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> 1. General aspects of traction system: Technical and design aspects of railway electrification. Train dynamics and speed-time characteristics. AC and DC railways, power supply systems and interference. Supply system requirements: performance under normal and emergency feeding conditions. Requirement of traction substations. Overhead and track level current collection systems. 2. Computer-aided design and operation of traction systems: Elements of design and analysis of traction systems: cost/benefit analysis; computer simulation of AC/DC power converter drives and traction equipment; power-factor, maximum-demand and energy-efficient operation; computer simulation of train performance for optimum headway, schedule speed and energy consumption; use of expert systems for system control and train scheduling. Computer modeling of non-linear source and traction load. Power quality issues of single phase AC traction: imbalance, harmonics and voltage dip; impact to traction system and public. Corrective measures and filter design. 3. Traction drives: Introduction of traction drives. Overview of the traction transmission systems. Tractive effort and power calculation. Overview of traction motors. Traction transformers. Single-phase drives; three-phase drives; chopper drives; inverter drives. Induction motor control for traction drives: VVVF control, PWM control and CVVF control. Principles of powering and regenerative braking; blended regenerative and rheostatic brake control. DC traction drives. 4. Maglev and linear drives: Principle and limitations of electromagnetic techniques of suspension and levitation. Levitation using permanent magnets, superconducting magnets and eddy currents induced by mains frequency excitation. Suspension using controlled DC electromagnets. Operation of linear motors. Application of linear drives in high speed transit systems.

	<p>Case Study:</p> <ol style="list-style-type: none"> 1. Traction drive systems 2. Feeding systems in AC traction 3. Signalling system installation 4. Load-flow analysis in traction power system 																															
<p>Teaching/Learning Methodology</p>	<p>Video clips together with computer animations are used to supplement conventional lectures. Case studies will be used extensively to highlight the practicality of the subject materials being covered. Practitioners are also invited to have experience sharing sessions with the class. A group project is to be carried out to demonstrate and integrate the knowledge learned.</p>

Subject Description Form

Subject Code	EE512
Subject Title	Electric Vehicles
Credit Value	3
Level	5
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	<ol style="list-style-type: none"> 1. To acquire a broad knowledge on modern electric vehicles (EVs). 2. To understand the development of EVs from technological, environmental, and societal perspectives.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Understand the importance of EVs for environment, energy sustainability and climate change. b. Understand various underpinning technologies for modern EVs, including electric motor drives, energy storage, batteries, charging methods, infrastructure and auxiliary systems. c. Explain the emerging technologies such as hybrid electric vehicles (HEVs), fuel cell electric vehicles (FEV) and energy storage methods.
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> 1. Introduction to electric vehicles (EVs): Historical perspective. EV advantages and impacts. EV market and promotion: infrastructure needs, legislation and regulation, standardization. 2. Electric vehicle (EV) design options: EV configurations: fixed vs. variable gearing, single- vs. multiple-motor drive, in-wheel drives. EV parameters, driving cycles and performance specifications. Choice of system voltage levels: electrical safety and protection. 3. Vehicle dynamics and motor drives: Road load: Vehicle kinetics; Effect of velocity, Acceleration and grade. EV drivetrain and components. EV motor drive systems: DC drives, Induction motor drives, Permanent-magnet synchronous motor drives, Switched reluctance motor drives. Control strategies. 4. Batteries: Battery parameters. Types and characteristics of EV batteries. Battery testing and maintenance; Charging schemes. Battery Management System. Open-circuit voltage and ampere-hour estimation. Battery load levelling Energy Storage. 5. Auxiliaries: On-board and off-board battery chargers. Energy management units. Battery state-of-charge indicators. Temperature control units. Power steering. 6. Emerging EV technologies: Hybrid electric vehicles (HEVs): types, operating modes, torque coordination and control, generator/motor requirements. Fuel cell electric vehicles (FEVs): fuel cell characteristics, hydrogen storage systems, reformers. Alternative sources of power: super- and ultra-capacitors, flywheels.

Teaching/Learning Methodology	Delivery of the subject is mainly through formal lectures, complemented by tutorials and worked examples. Self-learning on the part of students is strongly encouraged and extensive use of web resources will be made. A term paper and a related presentation enable students to develop skills in literature survey and writing. Oral presentation sessions develop students' skills in spoken communication and peer evaluation.

Subject Code	EE514
Subject Title	Real Time Computing
Credit Value	3
Level	5
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	<ol style="list-style-type: none"> 1. To understand the properties of real time programming languages, operating systems and associated hardware. 2. To apply real time system technologies and concepts in engineering applications. 3. To demonstrate and realize advantages in real time system underlying in today advanced technological evolvments.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Appreciate the important issues in real time computing systems, and their relations in engineering applications. b. Identify and understand the complications in a real time computing system. The mechanism of overcoming these obstacles is explored. c. Communicate effectively with concerned topics during discussions and presentations. d. Equip individual the ability to analyse related issues and identify the proper solution in a real-time computing design.
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> 1. <i>Real time computing systems concepts:</i> Characteristics of Real Time Computing. Properties and Speed Requirements of Real Time Systems. Synchronous Real Time Systems: Polled, Main Polled Loop with Interrupts, Cyclic Schedulers. Multi-Processors Real Time Systems: Multi-Processor Structures, Process Dispatch Latency, Inter CPU Communication, Hierarchical Approach to Real Time Systems. Process Scheduling Architecture of Cloud Computing. Example: A Real Time Control System in Coal-Fired Power Plant. 2. <i>Real time systems design issues:</i> Time Handling: Representation of Time, Time constraints, Time Service and Synchronization, Real Time System Life Cycle: Requirement Specification. Real Time System Modelling Example: Cluster computing, Internet of things in power energy platform. 3. <i>Real time system applications:</i> System supervision in Power System Process Operation. Implementation of IoT technology to resolve the real-time system operation issues. <p>Mini-Project: Implementation of a real-time computing system based on the Real-time OS</p>

Teaching/Learning Methodology	Lectures and tutorials are the primary means of conveying the basic concepts and theories. Experiences on design and practical applications are given through a mini-project, in which the students are expected to understand design problems with real-life constraints and to attain pragmatic solutions.

Subject Description Form

Subject Code	EE520
Subject Title	Intelligent Motion Systems
Credit Value	3
Level	5
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	<ol style="list-style-type: none"> 1. To describe an in depth knowledge on the design and operation of intelligent motion systems. 2. To relate and compare numerous application examples, which ranges from CD players and hard disc drives to robots and component insertion machines. 3. To enable the students to have the ability to design motion control systems for industry and domestic purposes.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Contrast and compare different motion control system configurations, and select the most appropriate one for the task. To comprehend and understand numerous motion control examples for domestic and industrial applications. b. Understand the in-depth knowledge of motion drive and sensing techniques, and the ability to use them in real engineering applications. c. Have a broad understanding of motion control platform hardware and a visionary perspective on the future developments of computing/control hardware.
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> 1. Structures of intelligent motion systems: Specifications and requirements of intelligent motion systems. Operating modes: point to point motion, trajectory path tracking, velocity path tracking, force and tension control, compliance control, vibration damping. Switching between operation modes. 2. Motion actuators and driving techniques: Using Voice Coil Motors and DC brush motors in motion control. AC brushless motors, linear direct drive AC brushless motors and their driving techniques. Stepping motors and their limitations in motion tracking systems. Microstepping and electronic damping of stepping motors. 3. Motion sensing and estimation techniques: Optical encoders: working principle, decoding method, and resolution enhancement through interpolation. Syncro-resolvers: working principle and interface electronics. Velocity estimation and position estimation methods for large speed range actuators. 4. Motion control platform: Computer hardware requirements. Tightly coupled systems versus distributed systems. Application of DSPs in motion control. Communication methods in motion systems. Real time operating system for motion control. 5. Intelligent algorithms for motion control and trajectory generation: PID controllers and their variations. Servo tuning methods. Motion control systems based on state space configuration. States observation and Kalman filters. Using Notch filters in non-rigid systems. Profile generation and motion planning algorithms. 6. Issues in multi-axis intelligent motion systems: co-ordinate mapping and dynamics transformation. Multi-axis motion planning and profile generation. Motion synchronisation between axis. Decoupling inter-axis motion interference. Applying MIMO structure in tightly coupled system.

	<p>7. Case studies in intelligent motion systems:</p> <p>Three examples will be selected from the following list:</p> <ol style="list-style-type: none"> Optical based position tracking in CD-ROMs and Laser discs. Magnetic head positioning in hard disk drives. Motion control system design in multi-axis robot manipulators. Gantry robot motion systems for SMT component insertion machines. Motion systems in high precision CNC tooling machines. <p>Case study: Report on a high performance motion control application example</p>

Subject Description Form

Subject Code	EE521
Subject Title	Industrial Power Electronics
Credit Value	3
Level	5
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	<ol style="list-style-type: none"> 1. To provide power electronics engineers with in-depth knowledge of the industrial power electronics. 2. To provide latest development in power supplies, industrial power electronics system and their applications in renewable energy systems. 3. To give industrial concern in power electronics design including passive components and standards 4. To introduce to students to the various topologies of the power electronics circuits. 5. To enable students to understand the power quality issues and the active and reactive power flow.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Acquire a good understanding of power supply concept and design and be able to analyse the industrial needs for static power conversion. b. Understand the international standards on power electronics design. c. Have a global view on recent development on power electronics and be aware of applications of power electronics in various industries d. Understand the various topologies and working principles of basic power converters e. Work in teams and independently when conducting power electronics design and testing.
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> 1. Industrial power systems: Static power systems, battery systems, AC systems, DC systems, AC-DC power conversion and recent advance in renewable energy systems such as wind and solar power 2. Power conversion: Soft-switching, power factor correction, inverter configurations and static converters. 3. Special environment power electronics: Power electronics distribution system, industrial guidelines, variable speed and constant frequency systems, actuation systems, brushless drives and other applications of power electronics in industry 4. Industrial power supplies: Converter topologies, decentralized power, power modules, electro-magnetic compatibility, international standards and reliability. 5. Power quality improvement: Fourier analysis of voltage current waveforms, total harmonic distortion, rectifier, passive/active filters, power quality issues, reactive power compensation. 6. Magnetics and capacitors: High frequency inductors and transformers, winding techniques, core loss analysis, optimization of magnetics and power capacitors. <p>Laboratory Experiments : Select 2 experiments from topics in computer simulation, DC-AC and DC-DC power converters.</p>

Teaching/Learning Methodology	<p>Lectures and tutorials are the primary means of conveying the basic concepts and theories. Experiences on design and practical applications are given through experiments and mini-projects, in which the students are expected to solve design problems with real-life constraints and to attain pragmatic solutions with critical and analytical thinking. Interactive laboratory sessions are introduced to encourage better preparation and hence understanding of the experiments. Experiments are designed to supplement the lecturing materials so that the students are encouraged to take extra readings and to look for relevant information.</p>

Subject Description Form

Subject Code	EE522
Subject Title	Optical Fibre Systems
Credit Value	3
Level	5
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	<ol style="list-style-type: none"> 1. To re-introduce to students the fundamentals of light emission, modulation, detection, amplification, and light propagation in optical fibres. 2. To enable students to understand the operating principle and performance specifications of various fibre-optic components, as well as their applications in modern fibre-optic systems. 3. To equip students with the ability to analyse and design simple fibre-optic communication and sensing systems.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Appreciate recent developments in fibre optic communication systems, importance of fibre optic technology to the development of communications, engineering applications of fibre-optic technologies, and advantages of fibre optic sensors to the electrical engineering industry. b. Understand the principles of different types of optical fibres, fibre components, sensors, and communication systems. c. Know the same function may be achieved by using different technologies and understand the advantages and limitations of each technology. d. Select the most appropriate passive and active fibre-optic components to design fibre-optic sensor systems and fibre optic communication links. e. Have hands-on experience in the use of fusion splicer to make low-loss fibre joints, optical spectrum analyzer to perform spectral measurements, and fibre grating sensors for temperature and strain measurements.
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> 1. Overview: Introduction to lightwave communication and sensor systems. Historical perspective. Basic concept and components. Channel capacity. 2. Optical fibres: Theory of optical wave-guiding. Numerical aperture. Fibre modes. Fibre fabrication. Attenuation and dispersion. Special optical fibres. 3. Passive fibre components: Light coupling. Splices and connectors. Couplers and splitters. Optical filters. Wavelength multiplexers/de-multiplexers. Fibre Bragg gratings. Optical isolators and circulators. 4. Optical sources: Light emission and absorption. Light emitting diodes. Optical feedback. Threshold condition. Laser modes. Semiconductor lasers. Tunable lasers. Modulation of light. Optical transmitters. 5. Optical amplifiers: Rare-earth doped fibres. Optical fibre amplifiers. Semiconductor amplifiers. 6. Optical detectors: PIN and avalanche photodiode. Noise and response time. Responsivity. Optical receivers. 7. Optical fibre communication systems: System architectures. Operating wavelength and system limitations. Power and rise-time budgets. Noise effects and other source of power penalty.

	<p>8. Optical fibre sensor systems: Intrinsic and extrinsic sensors. Intensity modulation sensors. Phase modulation sensors. Polarisation modulation sensors. Wavelength and frequency modulation sensors. Fibre grating sensors. Multiplexed and distributed sensing systems.</p> <p>Laboratory Experiments/Demonstrations: Observation of fibre modal patterns; Measurement of source spectrums; Optical fibre splicing and insertion loss measurement; Fibre Bragg grating sensors.</p>

Subject Description Form

Subject Code	EE524
Subject Title	Open Electricity Market Operation
Credit Value	3
Level	5
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	<ol style="list-style-type: none"> 1. To enable students to understand the key and practical issues of restructuring electricity supply industry and to establish a broad knowledge of open electricity market operation. 2. To enable students to understand the key issues in open electricity market operation including deregulated power system operation, transmission pricing, procurement of ancillary services, congestion management, available transmission capacity so that students are provided with knowledge and techniques they need to meet the electric industry's challenges in the 21st century.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Acquire a good understanding of the rationale and key issues for restructuring electricity supply industry, practical operation and design considerations for real world electricity markets, and financial tools to hedge risks used in electricity supply industries. b. Analyse the available transmission capacity and formulate equitable transmission pricing in electricity markets. c. Assess ancillary services requirements and values based on security, economic and performance considerations. d. Present technical results in the form of technical report and verbal presentation
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> 1. Restructuring of the Electricity supply industry (ESI): ESI structures; Privatisation and competition; Market structures and architectures; Regulation of Electricity Markets; Role of existing players. 2. Electricity market: Timeline coordination, design considerations and practical operation of a real-world electricity market system. Use of different financial contracts/tools including derivatives and electricity futures for risk management in electricity markets. Game theory approach for market competition analysis. Transmission congestion management in electricity market. Security considerations. 3. Transmission and ancillary services: Transmission ownership and restructuring. Measuring available transmission capacity in energy markets. Purchasing transmission capacity. Network and point to point transmission services. Fixed and firm transmission rights. Ancillary services and technical specifications, and performance based cost model. 4. Transmission pricing: The costs of transmission services. Locational prices. Embedded cost allocation methods. Stranded assets. Short-run marginal cost. Long-run marginal cost. Integrated approach of transmission pricing.

Teaching/Learning Methodology	<p>The concept of electricity market modelling and economic analysis framework will be presented through lectures and tutorials with reference to real-life market environment. Students will be required to form groups to work through cases covering the market structure and operational aspects so as to develop ability to critically evaluate principles and operation of electricity markets. Tutorials will be structured on different sessions for better understanding on the theoretical concepts which require sufficient contributions from students. Students will also learn through active participation in the presentation of finding of their case studies.</p> <table border="1" data-bbox="432 416 1455 622"> <thead> <tr> <th data-bbox="432 416 963 517" rowspan="2">Teaching/Learning Methodology</th> <th colspan="4" data-bbox="963 416 1455 465">Outcomes</th> </tr> <tr> <th data-bbox="963 465 1085 517">a</th> <th data-bbox="1085 465 1206 517">b</th> <th data-bbox="1206 465 1327 517">c</th> <th data-bbox="1327 465 1455 517">d</th> </tr> </thead> <tbody> <tr> <td data-bbox="432 517 963 568">Lectures</td> <td data-bbox="963 517 1085 568">✓</td> <td data-bbox="1085 517 1206 568">✓</td> <td data-bbox="1206 517 1327 568">✓</td> <td data-bbox="1327 517 1455 568"></td> </tr> <tr> <td data-bbox="432 568 963 622">Case Studies & Presentation</td> <td data-bbox="963 568 1085 622">✓</td> <td data-bbox="1085 568 1206 622">✓</td> <td data-bbox="1206 568 1327 622">✓</td> <td data-bbox="1327 568 1455 622">✓</td> </tr> </tbody> </table>					Teaching/Learning Methodology	Outcomes				a	b	c	d	Lectures	✓	✓	✓		Case Studies & Presentation	✓	✓	✓	✓

Subject Description Form

Subject Code	EE526
Subject Title	Power System Analysis and Dynamics
Credit Value	3
Level	5
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	<ol style="list-style-type: none"> 1. To introduce the students to the advanced concepts and analytical skills for the stability analysis in modern power systems. 2. To understand the causes and impact of different system instabilities. 3. To analyse and provide solutions to the power system stability problems.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Acquire in-depth understanding of different types of power system stability problems. b. Model the dynamic behaviours of system components under disturbances. c. Apply mathematics and engineering knowledge and skills in the analysis of stability problems. d. Discuss the causes and effects of instabilities and recommend possible solutions. e. Acquire skills in presentation and interpretation of experimental results and communicate in written form
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> 1. Power system stability: Basic concepts and classification. Past incidents of system instability and consequences. Power system stability issues and solutions. 2. Reactive power compensation: System Q-V Characteristics. Reactive support theory. Load Characteristics. Synchronous condensers, Static Var Compensators (SVS), Thyristor Switched Capacitor (TSC), Thyristor controlled Reactor (TCR). 3. Voltage stability: Fundamental concepts. Singularities and multiple load flow techniques, eigenvalue methods. Load modelling, tap-changer effects, voltage controllability and voltage compensation. Proximity of collapse, Measures against collapse. Practical experience. 4. Dynamic stability & power system stabilisers: Eigenvalue and modal analysis. Generator and load modelling. Power system stabiliser. Small-signal stability of multi-machine systems. Selection of input signal and installation location, parameter design and commissioning of PSS. 5. Application of HVDC, FACTS and ESS in improving stability: HVDC link operation and its control for stability improvement. Flexible AC transmission devices, power angle control. Energy storage system, e.g. BESS, SOFC, FESS, and its application in stability control. <p>Mini-projects:</p> <ol style="list-style-type: none"> 1. Power system stability analysis using industrial power systems design and analysis software 2. Power system stabiliser design for damping of low frequency power oscillation

Teaching/Learning Methodology	<p>Lectures and tutorials are the primary means of conveying the basic concepts and theories. Experiences on system analysis, design and practical applications are given through experiments, in which the students are expected to solve the power system stability and control design problems with practical constraints and to attain pragmatic solutions with critical and analytical thinking. Students will be required to form groups to work through a mini-project for a selected topic. Mini-Projects are used to enhance students learning experiences and practical applications.</p>

Subject Code	EE530
Subject Title	Electrical Energy Saving Systems
Credit Value	3
Level	5
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	<ol style="list-style-type: none"> 1. To enable students to establish a broad concept on energy saving using techniques of electrical engineering. 2. To provide an in-depth knowledge on selected topics of energy-saving systems in electrical engineering. 3. To enable students to understand typical energy storage systems, its associated issues of grid connection and related technical considerations. 4. To enable students to understand the potential of solar energy and characteristics & performance of various kinds solar energy systems. 5. To enable students to understand various techniques and systems for control and monitoring of energy saving, as well as the related communication protocol and interfacing requirements. 6. To enable students to understand control gears for lighting systems and variable speed drives for HVAC systems & elevators.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Describe the operation principle & control strategy of various energy storage systems and topologies of these systems and identify their benefits & impacts. b. Describe the principle and characteristics of various solar energy devices, and identify the potentials of solar energy. Calculate available solar irradiation for a given location. c. Describe the operation principle and characteristics of typical control and monitoring systems for energy saving, including the communication protocols. d. Identify different energy saving control for industrial plants and multi-storey buildings, including giving examples. e. Describe the operation principle and characteristics of typical control gear for lighting and variables speed drives. f. Given a technical topic, carry out literature search and report the findings in a presentation and be able to work and communicate effectively in a team setting.
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> 1. Energy storage systems: Utility Load Factor, peak lopping and valley filling, energy storage systems, battery energy storage, super-capacitor, power electronics topologies, control strategy, grid connection, voltage support, power quality improvement, environmental impact, improvement of utility energy efficiencies. 2. Solar energy utilization: Solar irradiation on earth, potentials of solar energy, solar thermal system systems, photovoltaic systems, characteristics and performance of typical BIPV systems and estimation of its energy output, distributed power generation, passive solar devices on buildings for energy saving, and case study. 3. Energy saving control and monitoring systems: Theory of energy saving, concept of building energy efficiency, control and monitoring systems and some of its related communication protocols. Application examples.

	<p>4. Lighting, ballast, and variable speed drives: Magnetic ballast, electronic ballast, lighting design, fluorescent, LED and HID lamps, variable speed drives for HVAC systems and elevators, energy storage and regeneration for elevators, harmonics implications.</p> <p>Laboratory Experiments, Seminars, Site Visits: Demonstration on operating principles of some selected energy-saving systems.</p> <p>Case study: Selections of practical real life energy-saving systems in Hong Kong.</p>																																																				
<p>Teaching/Learning Methodology</p>	<p>Lectures and tutorials are the primary means of conveying the basic concepts and theories. Practical experiences on power electronics design, energy saving and applications are given through mini-projects. Mini-projects are given in the beginning of the study. Students are encouraged to form group to jointly investigate an industrial problem and they have to present the projects in front of the class.</p> <table border="1" data-bbox="432 645 1455 913"> <thead> <tr> <th rowspan="2">Teaching/Learning Methodology</th> <th colspan="6">Outcomes</th> </tr> <tr> <th>a</th> <th>b</th> <th>c</th> <th>d</th> <th>e</th> <th>f</th> </tr> </thead> <tbody> <tr> <td>Lectures</td> <td>✓</td> <td>✓</td> <td>✓</td> <td>✓</td> <td>✓</td> <td></td> </tr> <tr> <td>Tutorials</td> <td>✓</td> <td>✓</td> <td>✓</td> <td>✓</td> <td>✓</td> <td></td> </tr> <tr> <td>Mini-project</td> <td></td> <td></td> <td></td> <td></td> <td></td> <td>✓</td> </tr> </tbody> </table>							Teaching/Learning Methodology	Outcomes						a	b	c	d	e	f	Lectures	✓	✓	✓	✓	✓		Tutorials	✓	✓	✓	✓	✓		Mini-project						✓

Subject Description Form

Subject Code	EE533
Subject Title	Railway Power Supply Systems
Credit Value	3
Level	5
Pre-requisite/ Co-requisite/ Exclusion	Nil
Collaboration Institute	MTR Academy
Objectives	<ol style="list-style-type: none"> 1. To enable students to develop a comprehensive understanding of the modern railway power supply systems in metro and mainline systems. 2. To provide an appreciation of the specifications and design of the supply system configuration. 3. To enable students to understand the implications of supply system design on safety and service quality, as well as the practices and difficulties in implementation. 4. To provide students with the basic terminology and the practical processes of testing and commissioning. 5. To enable students to comprehend the connection of the railway supply system to the utility distribution network.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Identify the key components in a railway supply system and their functions and appreciate the relationship of the supply system to other systems in railway. b. Differentiate the requirements on power supply systems in different railway systems, metros, mainlines and light rails. c. Apply the knowledge on power supply system to comprehend the design and installation of power supply system. d. Discuss procedures of testing and commissioning of railway power system and analyse possible faults. e. Recognise the importance to engage in self-learning on latest technologies on railway systems at this advanced level of study.
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> 1. General aspect of railway power supply system: Metro system, Light rail system, electric multiple units and locomotives, functions of traction supply system, interface requirement among power and traction supply system, contact line system, permanent way, signalling, SCADA and train. 2. Railway power supply system – requirement and specification: Types of railway power supply systems, basic structure and design of standard AC distribution and DC traction substation and control system. 3. DC and AC overhead line system and equipment: Terminology, overhead contact line types and basic characteristic; Basic design – mechanical, electrical and civil; Design for installation, testing and commissioning; failure analysis. 4. Traction earthing and DC stray current control system: Terminology, operation requirement and specification; DC current return, earthing and bonding; Design for installation, testing and commissioning; Failure analysis.

	<ol style="list-style-type: none"> 5. AC traction supply system and power quality issues: Configuration and operation of 25kV system; Power quality; Voltage dip, harmonics, imbalance, and remedial measures. 6. Traction drives, tractive effort and power calculations, overview of traction motors, VVVF control, PWM control, and regenerative braking. 7. EMC: Principles of EMC, railway-related interference problems and their solutions, booster transformer. 8. Site visit to MTR power supply systems. 																																								
Teaching/Learning Methodology	<p>The main lecturers are from MTRC, and their experiences/knowledge are shared with students via lectures and tutorials for conveying the concept and theories. The site visit to MTR system has reinforced the pragmatic design and application in a realistic system. Problem solving skill and team work are trained via minor project and laboratory.</p> <table border="1" data-bbox="432 602 1457 808"> <thead> <tr> <th rowspan="2">Teaching/Learning Methodology</th> <th colspan="5">Outcomes</th> </tr> <tr> <th>a</th> <th>b</th> <th>c</th> <th>d</th> <th>e</th> </tr> </thead> <tbody> <tr> <td>Lectures</td> <td>✓</td> <td>✓</td> <td>✓</td> <td>✓</td> <td>✓</td> </tr> <tr> <td>Tutorials</td> <td></td> <td>✓</td> <td>✓</td> <td>✓</td> <td>✓</td> </tr> </tbody> </table>	Teaching/Learning Methodology	Outcomes					a	b	c	d	e	Lectures	✓	✓	✓	✓	✓	Tutorials		✓	✓	✓	✓

Subject Description Form

Subject Code	EE535
Subject Title	Maintenance and Reliability Engineering
Credit Value	3
Level	5
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	<ol style="list-style-type: none"> 1. To provide students with a comprehensive understanding on various maintenance management processes. 2. To enable students to understand the impact of maintenance management on railway objectives in safety, reliability and cost effectiveness. 3. To enable students to acquire knowledge and techniques in reliability engineering. 4. To equip students to make decisions on sound maintenance and reliability improvement. 5. To enable students to apply the techniques in reliability engineering to railway operation.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Identify the possible faults in railway systems and their impacts to the overall system reliability. b. Develop fault trees for a sub-system in railways and apply various reliability models on fault analysis. c. Discuss system data collection for reliability assessment. d. Evaluate maintenance schedules and assess the corresponding risk with appropriate techniques and tools. e. Review the advantages and limitations on condition-based monitoring maintenance, alternative sourcing of inventory and maintenance outsourcing management for railway assets. f. Organise and present an assigned research topic.
Subject Synopsis/ Indicative Syllabus	<p>Reliability Engineering</p> <ol style="list-style-type: none"> 1. Reliability fundamentals: Reliability Mathematics. Failure distributions. Causes of failures and their treatment. Reliability apportionment and prediction. Reliability data books. Data Recording and Corrective Action System (DRACAS). 2. Reliability analysis and modelling methods: Fault tree analysis, Failure Mode Effects and Criticality Analysis (FMECA), Reliability block diagram, Reliability Growth Models – IBM and Duane Reliability Growth modelling, Reliability testing. Monte Carlo Reliability Simulation. Weibull Analysis. <p>Maintenance Management</p> <ol style="list-style-type: none"> 1. Asset management framework based on ISO55000/55001. Alignment with corporate asset management direction. Asset management organization. Asset management and business sustainability. 2. Maintenance techniques and tools: Maintenance as an essential element for asset management. Reliability Centred Maintenance as a means for maintenance decision. Topics on conditioned based maintenance. 3. Management for business performance: Computerized Maintenance Management System – from planning to implementation. Alternative spare sourcing. Maintenance outsourcing management for railway assets. <p>Site visits to MTR depots and industrial/research seminars.</p>

Teaching/Learning Methodology	<p>Video clips together with computer animations are used to supplement conventional lectures. Case studies will be used extensively to highlight the practicality of the subject materials being covered. Practitioners are also invited to have experience sharing sessions with the class. A group project is to be carried out to demonstrate and integrate the knowledge learned.</p>

Subject Description Form

Subject Code	EE536
Subject Title	Signalling and Train Control Systems
Credit Value	3
Level	5
Pre-requisite/ Co-requisite/ Exclusion	Nil
Collaboration Institute	MTR Academy
Objectives	<ol style="list-style-type: none"> 1. To provide students with a comprehensive understanding on the basic principles and terminology of railway signalling. 2. To enable students to acquire knowledge on train control systems and their implications to safe and efficient railway operation. 3. To enable students to understand the design processes of signalling layout the control of signals. 4. To provide students with the basic concepts on the principles, means, instrumentation and commissioning of train detection and interlocking systems. 5. To appreciate the structure and components of an automatic train control system.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Identify the functions, operation principles and key components of a signalling system. b. Given track layout and signalling requirements, formulate a simple signalling layout. c. Describe the train detection methodologies and implementation considerations, and compare their advantages and limitations. d. Compare between relay interlocking and processor-based interlocking, their safety principles and commissioning plans. e. Explain the requirements and structure of an automatic train control system.
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> 1. Basic signalling principles: Safe operation of trains, prevention of trains collision and locking of points and routes; type of signalling, signal spacing and signalling layout; headways line capacity, headways for different types of signalling systems, factors affecting headways; control table, conditions for setting of routes, clearing of signals and locking of routes and points; aspect sequence, meaning of signal aspect and the circumstances under which signals display. 2. Train detection: Track circuit, axle counter and advanced detection system; track circuit bonding; track circuit connections and maintenance of traction return at points and crossings. 3. Signalling interlocking: Interlocking implementation based on relays, safety principles; processor based interlocking, interlocking implementation based on processors/computers, safety principles. 4. Principles of testing: Competence, functional tests, scenario tests, independent test, test strategy, test plan, commissioning plan, records. 5. Automatic train control system: Automatic train protection, automatic train operation and automatic train supervision. <p>Case Study: Site visits to MTR train control centres Industrial/Research seminars</p>

Teaching/Learning Methodology	<p>Basic principles of signalling functions and operations are usually simple but they are always complicated by the implementation and practices in systems with unique requirements. Lectures are necessary to cover the fundamentals, supplemented by the examples and exercises from real-life applications. Site visits to the MTR Control Centres are also arranged so that the students are able to co-relate what they have learned to actual operations.</p> <table border="1" data-bbox="435 349 1453 607"> <thead> <tr> <th data-bbox="435 349 922 405">Teaching/Learning Methodology</th> <th colspan="5" data-bbox="922 349 1453 405">Outcomes</th> </tr> <tr> <td data-bbox="435 405 922 450"></td> <th data-bbox="922 405 1026 450">a</th> <th data-bbox="1026 405 1137 450">b</th> <th data-bbox="1137 405 1233 450">c</th> <th data-bbox="1233 405 1345 450">d</th> <th data-bbox="1345 405 1453 450">e</th> </tr> </thead> <tbody> <tr> <td data-bbox="435 450 922 506">Lectures</td> <td data-bbox="922 450 1026 506">✓</td> <td data-bbox="1026 450 1137 506">✓</td> <td data-bbox="1137 450 1233 506">✓</td> <td data-bbox="1233 450 1345 506">✓</td> <td data-bbox="1345 450 1453 506"></td> </tr> <tr> <td data-bbox="435 506 922 551">Site visits</td> <td data-bbox="922 506 1026 551"></td> <td data-bbox="1026 506 1137 551">✓</td> <td data-bbox="1137 506 1233 551"></td> <td data-bbox="1233 506 1345 551">✓</td> <td data-bbox="1345 506 1453 551">✓</td> </tr> <tr> <td data-bbox="435 551 922 607">Industrial seminars</td> <td data-bbox="922 551 1026 607"></td> <td data-bbox="1026 551 1137 607"></td> <td data-bbox="1137 551 1233 607"></td> <td data-bbox="1233 551 1345 607"></td> <td data-bbox="1345 551 1453 607">✓</td> </tr> </tbody> </table>					Teaching/Learning Methodology	Outcomes						a	b	c	d	e	Lectures	✓	✓	✓	✓		Site visits		✓		✓	✓	Industrial seminars					✓

Subject Description Form

Subject Code	EE537
Subject Title	Railway Vehicles
Credit Value	3
Level	5
Pre-requisite/ Co-requisite/ Exclusion	Nil
Collaboration Institute	MTR Academy
Objectives	<ol style="list-style-type: none"> 1. To provide students with a comprehensive understanding on design and applications of railway vehicles. 2. To ensure the students aware of the current state-of-the-art on design, operation and maintenance of railway vehicles in Hong Kong and overseas. 3. To enable students to understand the procurement process of railway vehicles and the necessary management. 4. To acquire knowledge on the components in railway vehicles and their modelling for analysis. 5. To appreciate the testing standards for vehicles; and the inspection and quality control measures.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Identify various types and configurations of railway vehicles. b. Discuss the design principles and system performance of railway vehicles and be aware of the latest development in the technology. c. Elaborate on the project management process for railway vehicle procurement and devise feasibility study and maintenance planning. d. Apply appropriate modelling for vehicles, body design and train dynamics in vehicle performance analysis. e. Given the acceptance standards, formulate tests and inspection for quality control purposes. f. Appreciate the role of engineers on matters other than technical issues. g. Recognise the importance to engage in self-learning on latest technologies on railway vehicle design at this advanced level of study.
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> 1. <i>Project management for procurement of railway vehicle:</i> Planning and preliminary design, System selection, definition of vehicle, specification, design management, testing and commissioning, maintenance planning. 2. <i>Railway vehicle design and development:</i> Types and configurations of railway vehicles, design principles, system performance, Interface and environmental considerations, modern development. 3. <i>System description and mechanism design:</i> Carbody, bogie, coupler, door, brake, pneumatics, air-conditioning, traction and control, pantograph, and train management system. 4. <i>Vehicle modelling and gauging:</i> Rail vehicle components, suspension system, modelling of vehicles and analysis, kinetic envelope, load gauge. 5. <i>Vehicle structures and dynamics:</i> Body shell design, load cases, structural testing and analysis, fundamentals of train dynamics, wheel rail interface, track geometry effect, derailment prediction.

	<p>6. Vehicle acceptance and testing: Acceptance standards, type test, inspection and quality control, static testing, dynamic runs, trial operation and reliability monitoring.</p> <p>Case Study: Site Visits to MTRCL Depots Industrial/Research Seminars</p>																																																				
<p>Teaching/Learning Methodology</p>	<p>The main lecturers are from MTRC, and their experiences/knowledge are shared with students via lectures and tutorials for conveying the concept and theories. The site visit to MTR system has reinforced the pragmatic design and application in a realistic system. Problem solving skill and team work are trained via minor project.</p> <table border="1"> <thead> <tr> <th rowspan="2">Teaching/Learning Methodology</th> <th colspan="7">Outcomes</th> </tr> <tr> <th>a</th> <th>b</th> <th>c</th> <th>d</th> <th>e</th> <th>f</th> <th>g</th> </tr> </thead> <tbody> <tr> <td>Lectures</td> <td>✓</td> <td>✓</td> <td>✓</td> <td>✓</td> <td>✓</td> <td>✓</td> <td>✓</td> </tr> <tr> <td>Tutorials</td> <td></td> <td>✓</td> <td>✓</td> <td>✓</td> <td>✓</td> <td>✓</td> <td>✓</td> </tr> </tbody> </table>	Teaching/Learning Methodology	Outcomes							a	b	c	d	e	f	g	Lectures	✓	✓	✓	✓	✓	✓	✓	Tutorials		✓	✓	✓	✓	✓	✓

Subject Description Form

Subject Code	EE5381
Subject Title	System Assurance and Safety in Railways
Credit Value	3
Level	5
Pre-requisite/ Co-requisite/ Exclusion	Exclusion: EE538
Collaboration Institute	MTR Academy
Objectives	<ol style="list-style-type: none"> 1. To allow students to appreciate the importance of safety in railway operation and the required organisation for hazard management. 2. To provide students with a comprehensive understanding on the relationship between railway safety and service performance objectives and application of methodologies of system assurance and safety risk. 3. To enable students to acquire knowledge on the key management processes and analysis techniques adopted in various project phases. 4. To enable students to apply international standards on railway system assurance and safety risk. 5. To enable students to acquire hand-on experience from railway operators on system assurance and safety risk practices.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Identify safety performance indicators and the safety risk principles to produce such indicators. b. Given a railway sub-system, devise the simple safety risk ranking and matrices; and carry out hazard operability study. c. Conduct various system assurance analyses with different techniques to ensure fulfillment of international standards for different purposes. d. Organise safety committees, formulate system assurance programme planning and develop safety cases. e. Analyse the collected safety statistics and plan the hazard registration system. f. Appreciate the safety management skills required in engineering systems g. Recognise the importance to engage in self-learning on latest technologies on railway systems at this advanced level of study.
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> 1. Safety Risk Assessment: Railway safety performance, lifecycle safety management process, ALARP (As Low AS Reasonably Practicable) principle, societal perception of risk, risk ranking and matrices, closed-loop risk management process, tolerability of risk and formulation of risk criteria, value of preventing a fatality, equivalent fatality, risk mitigation principle 2. System Assurance Analysis Techniques & Standards: Hazard & operability study, use of guidewords in identification of hazards, fault tree analysis, event tree analysis, cause-consequence analysis, preliminary hazard analysis, operation & support hazard analysis, cost-benefit analysis, qualitative and quantitative risk analyses, system safety modelling, classification of safety critical items, human error & system safety, safety integrity level & software, MIL STD 882D, IEC 61508, EN50126, BS 5760 3. Organisation & Programme Management: Safety committees, system assurance programme planning, structure of system safety report/safety Case, in-service safety risk monitoring programme, collection and use of safety statistics, hazard registration system, hazard management organisation. <p>Case Study: MTRCL System assurance practices Industrial/Research seminars</p>

Teaching/Learning Methodology	<p><u>Lectures and tutorials are effective teaching methods:</u></p> <ol style="list-style-type: none"> To provide an overview or outline of the subject contents. To introduce new concepts and knowledge to the students. To explain difficult ideas and concepts of the subject. To allow students to feedback on aspects related to their learning. <p><u>Mini-project works/Assignments are essential ingredients of this subject:</u></p> <ol style="list-style-type: none"> To supplement the lecturing materials. To add real experience for the students. To provide deeper understanding of the subject. To enable students to organise principles and challenge ideas. <p><u>Case studies:</u></p> <ol style="list-style-type: none"> To give real examples for some of the concept presented in the lectures. Subject Description Form

Subject Code	EE539
Subject Title	Aerospace Power Electronics and Actuation Systems
Credit Value	3
Level	5
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	<ol style="list-style-type: none"> 1. To provide engineers with in depth knowledge of the use of power electronics and actuation systems in the aerospace industry. 2. To provide latest development and applications in power conversion, electric actuator, fly-by-wire, fly-by-light and space power engineering.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Have the ability to acquire a good understanding of aircraft actuation systems. Be able to present the understanding of the basic requirements of aircraft actuation systems. b. Understand and analyse power system needed for the aerospace applications. Be able to present the understanding of power systems for aircrafts. c. Understand the power electronics needs to military devices and space applications. Be able to present the understanding of the basic requirements of power electronics to aerospace environment.
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> 1. More electric aircraft: Basic concept of more electric aircraft, review of electric systems of aircraft, wiring and cabling, cabin lighting and utilities, electric aircraft 2. Aircraft power electronics: Soft power system, rectifier units, distribution systems, and power supplies. 3. Actuation systems: Review of hydraulic and electro-hydraulic control systems, hydraulic servo valve, fuel pump, landing gear, secondary flight control system, flux-reverser. 4. Aerospace standards: Military standards, British standards on aerospace, and NASA standards. 5. Aerospace and aeronautic control: Reliability, fly-by-wire, fly-by-light, unmanned air vehicles, propulsion, aeronautic computing system and gyroscope. 6. Military power electronics and actuation: Packaging for Military-standard, missile control and guidance system, E-bomb. 7. Space power engineering: Ion-thrusters, rocket power electronics and system, power conversion and energy storage in space, space transportation, and photovoltaic system. <p>Laboratory Class: Each student is required to conduct a laboratory test or attend a demonstration to understand the aerospace devices and components.</p> <p>Assignment and mini-project: Each student is required to work on a mini-project which covers the above selected areas. Written report and presentation are needed.</p>

Teaching/Learning Methodology	<p>Lectures and tutorials are the primary means of conveying the basic concepts and theories. Experiences on design and practical applications are given through a practical case study, in which the students are expected to understand design problems with real-life constraints and to attain pragmatic solutions.</p> <table border="1" data-bbox="432 275 1457 506"> <thead> <tr> <th data-bbox="432 275 959 365" rowspan="2">Teaching/Learning Methodology</th> <th colspan="3" data-bbox="959 275 1457 320">Outcomes</th> </tr> <tr> <th data-bbox="959 320 1102 365">a</th> <th data-bbox="1102 320 1286 365">b</th> <th data-bbox="1286 320 1457 365">c</th> </tr> </thead> <tbody> <tr> <td data-bbox="432 365 959 409">Lectures</td> <td data-bbox="959 365 1102 409">√</td> <td data-bbox="1102 365 1286 409">√</td> <td data-bbox="1286 365 1457 409">√</td> </tr> <tr> <td data-bbox="432 409 959 454">Tutorials</td> <td data-bbox="959 409 1102 454">√</td> <td data-bbox="1102 409 1286 454">√</td> <td data-bbox="1286 409 1457 454">√</td> </tr> <tr> <td data-bbox="432 454 959 506">Assignment/Presentation</td> <td data-bbox="959 454 1102 506">√</td> <td data-bbox="1102 454 1286 506">√</td> <td data-bbox="1286 454 1457 506">√</td> </tr> </tbody> </table>				Teaching/Learning Methodology	Outcomes			a	b	c	Lectures	√	√	√	Tutorials	√	√	√	Assignment/Presentation	√	√	√

Subject Description Form

Subject Code	EE545
Subject Title	Modern Generation and Grid Integration Technologies
Credit Value	3
Level	5
Pre-requisite/ Co-requisite/ Exclusion	Students are expected to have substantial knowledge about electrical power systems. Exclusion: EE501
Collaboration Institute	HK Electric Institute
Objectives	<ol style="list-style-type: none"> 1. To enable students to establish a broad concept on modern power generation technologies, including local relevant renewable energy and gas turbines. 2. To enable students to understand typical renewable energy technologies and related energy storage systems, its associated characteristics, performance, issues of application and related technical considerations. 3. To provide an in-depth knowledge on gas turbine power plants, combined cycle systems, cogeneration and trigeneration systems. 4. To enable students to understand how to integrate renewable energy into power grid, its related issues, concept of micro grid, smart grid, distributed generation and distribution automation.
Intended Learning Outcomes	<p>Upon Completion of the subjects, student will be able to:</p> <ol style="list-style-type: none"> a. Identify suitable renewable energy source and fuel-mix for electricity generation in Hong Kong under current situations b. Explain the principle of operation for the generation technologies, including their integration into the modern power grid or micro grids. c. Design the overall architecture for the power generation systems and the interfacing parts, and analysis their performance.
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> 1. Energy resources and types (1.5 weeks): Renewable and non-renewable energy resources. World potential and trends. Environmental effects. Local relevant renewable energy types and present developments. Role and importance of renewable energy. 2. Wind and solar energy (2 weeks): Overview of wind energy, wind turbine technology, onshore and offshore wind farms, planning considerations for offshore wind farm, wind resource assessment, wind farm siting and optimization, case study. PV technology, PV panel comparison (performance, cost) and criteria for PV module selection, photovoltaic conversion systems, feasibility study and site selection, design and monitoring techniques, new development in PV technology, case study. 3. Energy storage technology (2 weeks): Types of utility scale energy storage systems and the associated power electronic systems and energy management: pumped water storage, hydroelectric dams, batteries, supercapacitors, superconducting magnetic energy and hydrogen storage. Concept of vehicles-to-grid. 4. Gas turbine and cogeneration technology (1 week): comparison of its emission with other fossil fuel plants. Types of gas turbines and its characteristics and operation features. Combined cycle, cogeneration and trigeneration. Major equipment of a Combined Cycle Generation Unit, Thermal cycle and performance indices of combined cycle generation unit.

	<p>5. Electrical System in a Power Generation Plant (1 week): Theory of Electricity Generation, Major Electrical Equipment and Machines of a Generation Unit, Power Distribution Systems in a Power Plant, Case study.</p> <p>6. Grid integration (3 weeks): Integrating renewable energy sources into the power grid, the issues, the associated power electronic systems and its design, load levelling, energy demand response & management, related power dispatching issues. Complementary characteristics among RE sources and energy storages. Case studies: possible example is Longyangxia Dam Solar Park and Alto Rabagao Solar Dam. Applications of smart grids in this area. Concept of micro-grid and distributed generation & distributed automation.</p> <p>7. Application examples, demonstration and trends (1.5 weeks): Demonstration projects or case study on micro-grid, smart meters, distributed automation, co-generation, trigeneration and vehicle-to-grid concept. Future trends.</p> <p>Note: 1 week is reserved for test(s) and revision.</p> <p>Site Visit in a weekend: Lamma Power Station and Lamma Winds</p> <ol style="list-style-type: none"> L9 Combined-Cycle Generation Unit Gas Receiving Station PV Solar Panel System Wind Turbine 																																	
<p>Teaching/Learning Methodology</p>	<p>Delivery of the subject is mainly through formal lectures, complemented by tutorials, work examples/case studies and a visit/ demonstration. Subject Description Form

Subject Code	EE546																					
Subject Title	Electric Energy Storage and New Energy Sources for Electric Vehicles																					
Credit Value	3																					
Level	5																					
Pre-requisite/ Co-requisite/ Exclusion	Nil																					
Objectives	<ol style="list-style-type: none"> To acquire a broad knowledge on classical and modern electric energy storage To understand the development of energy storage from technological, environmental, and societal perspectives. 																					
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> Understand the importance of energy storage as it pertains to environmental concerns, energy sustainability and climate change. Understand various underpinning technologies for conventional and modern energy storage including both portable and stationary systems, such as batteries, supercapacitors, compressed air, flow batteries, new fuel, and fuel cells. Explain the role of energy storage in new energy in electric vehicles (EV) and discuss how energy storage devices can be optimally integrated for these applications. 																					
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> Concept of energy storage: History of energy storage, classification of the types of energy storage. Electrochemical storage: Lead-acid and Nickel batteries, Lithium/sodium-based battery, Flow and Redox batteries, Fuel cell, Sustainability considerations for future electrochemical systems. Carbon-hydride: Carbon hydride energy storage system, non-carbon based fuel, cracking, fuel transportation, fuel storage. Mechanical storage: Compressed air energy storage, pumped hydro energy storage, flywheels. Static Energy Storage: Super-capacitor, Magnetic Energy storage. Electrical energy storage parameters: State of Charge, State of Health, cell impedance and electrochemical impedance spectroscopy, cell models Energy management System: Battery management, Energy management, cell equalization, conditional monitoring. New Energy for vehicles: Solar vehicles, Fuel cell vehicles, hydrogen engine, compressed gas vehicles, power conversion for new energy.

Subject Description Form

Subject Code	EE547			
Subject Title	Electric Vehicle Charging Systems			
Credit Value	3			
Level	5			
Pre-requisite/ Co-requisite/ Exclusion	Nil			
Objectives	3. To acquire a broad knowledge of electric vehicle charging technology 4. To understand the development of electric vehicle charger from technological, environmental, and societal perspectives.			
Intended Learning Outcomes	Upon completion of the subject, students will be able to: a. Understand the importance of chargers as it pertains to environmental concerns, energy sustainability, climate change, and global policy. b. Understand various underpinning technologies for charger including conductive, wireless and battery swapping. c. Acquire the knowledge of charger practice, charger policy and infrastructure.			
Subject Synopsis/ Indicative Syllabus	1. Introduction to electric vehicle charging technology: Charging system, Constant voltage, Constant current, Pulse charging. 2. Charger Circuit: Circuit topology, Charging control, AC and DC chargers, Semi-fast, fast and quick chargers. 3. Inductive charging: Concept of wireless power transfer, Dynamic wireless charger, Coil design, Coupling, Electromagnetic interference. 4. Charger standards: Wireless standards including Qi, PMA, A4WP, Magnet, conductive charger standard including CHAdeMO, SAE and IEC, Connection and plug. 5. Charger infrastructure: Charging station and network, pantograph, load management, Vehicle to Grid, EV Penetration, Synergistic control of EV and planning. 6. Other Charging technologies: Battery swapping, Hydrogen and solid fuel.			
Teaching/Learning Methodology	Delivery of the subject is mainly through formal lectures, complemented by tutorials, worked examples and assignment. Self-learning on the part of students is strongly encouraged and extensive use of web resources will be made.

Subject Description Form

Subject Code	EE548																											
Subject Title	Advanced Electric Vehicle Technology																											
Credit Value	3																											
Level	5																											
Pre-requisite/ Co-requisite/ Exclusion	Pre-requisite: EE512																											
Objectives	<ol style="list-style-type: none"> 1. To acquire a high level of electric vehicles technology and future EV design 2. To understand the development of the impact of electric vehicles on society and security. 																											
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Understand the advanced knowledge of the electric vehicle. b. Understand various advanced parts and components in electric vehicles. c. Understand the future energy sources and storage for electric vehicles. d. Impact of electric vehicles and emerging technologies. 																											
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> 1. Future EV design and demand: All electric parts and components design, configurable EVs, high speed vehicles, hyperloop vehicle, Magnetic levitation vehicle. 2. Advanced motor drive: In-wheel motor, anti-braking system (ABS), Continuously Variable Transmission (CVT), active suspension. 3. Advanced energy storage: Distributed energy storage, future battery, future fuel cell. 4. Power electronics for EV: High power density power electronics, High current power electronics. 5. EV and security: Advantage and disadvantage of EVs, Autocrypt V2G, EV accidents and safety, EV maintenance, Internet of Thing (IoT) for EVs, Intra vehicle security, Vehicle to Data Center security 6. Autonomous vehicles: Layers of autonomy, Unmanned ground vehicle (UGV), Advanced Driver Assistance Systems (ADAS), Smart sensors, radar, Lidar, Path control. 7. Future power sources for EV: Photovoltaic to EV, Catenary-free electric trains and Trolley bus, Non-Carbon fuel, New energy for EVs. 8. EV policy: Government Policy in EVs, Infrastructure of EVs, sustainability and the environment. 																											
Teaching/Learning Methodology	<p>Delivery of the subject is mainly through formal lectures, complemented by tutorials, worked examples and assignment. Self-learning on the part of students is strongly encouraged and extensive use of web resources will be made.</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th rowspan="2" style="width: 50%;">Teaching/Learning Methodology</th> <th colspan="4">Intended subject learning outcomes</th> </tr> <tr> <th style="width: 12.5%;">a</th> <th style="width: 12.5%;">b</th> <th style="width: 12.5%;">c</th> <th style="width: 12.5%;">d</th> </tr> </thead> <tbody> <tr> <td>1. 	<p>The assignment is designed to assess students' understanding of the advanced electric vehicle principles and its impact to society and whether they can present the study clearly. Oral presentation for their assignment is needed. It includes the take-home-assignment and mini-project.</p> <p>The test is designed to assess students' understanding of the topics that they have learnt relative to learning outcomes (a), (b), (c) and (d). The test is usually conducted in the mid-semester to measure students' performance.</p> <p>Examination: questions are designed to assess learning (a), (b), (c) and (d). Students are required to answer questions that cover all of the learning outcomes.</p>

Subject Description Form

Subject Code	EE549
Subject Title	Modern Sensor Technologies
Credit Value	3
Level	5
Pre-requisite/ Co-requisite/ Exclusion	Undergraduate-level circuit and electromagnetic theory
Objectives	<ol style="list-style-type: none"> 1. To acquire the fundamentals of sensor technologies. 2. To make the students to understand the structures and working principles of resistive, capacitive, piezoelectric, acoustic, electric and magnetic sensors. 3. To enable the students to understand and design thermal and mechanical sensors, optical sensors, optical fiber sensors and micro-electromechanical system (MEMS) sensor technologies. 4. To know the applications of sensors in Electrical Engineering.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Acquire the operation principles and recent developments of sensors and transducer technologies, including thermal and mechanical sensors, electric and magnetic sensors, optical sensors as well as MEMS sensors technologies. b. Understand the structures and working principles of thermal sensors, mechanical sensors, acoustic sensors, electric and magnetic sensors for practical applications. c. Select the most appropriate optoelectronic components and optical fiber devices to design optical sensors and optical fiber sensor systems. d. Comprehend the structures and multidisciplinary working principles of MEMS-technology and sensor networks. e. Have hands-on experience in the assembling and testing of electric/optical sensors or MEMS sensors.
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> 1. Introduction to sensor fundamentals. Definition of sensors; sensor and information; physical quantities; relation between quantities; sensor classification; uncertainty aspects. 2. Thermal, mechanical and acoustic sensors. Resistivity and resistance; construction, general properties and applications of potentiometric sensors; strain gauges and their applications; thermoresistive sensors; capacitance and permittivity; flat-plate and multi-plate capacitive sensors; silicon capacitive sensors and applications. 3. Electric and magnetic sensors. Magnetic induction, permeability and magnetostriction; magnetic field sensor; magnetic and induction based displacement and force sensors; piezoelectric materials and parameters; piezoelectric force, pressure and acceleration sensors and applications. 4. Optical sensors and optical fiber sensors. Electro-optical components; classification of optical sensors; optoresistive sensors; optical displacement sensors; optical acoustic sensors; optical fiber grating sensors; optical fiber distributed sensors and applications. 5. MEMS and optical MEMS sensors. Production of MEMS; MEMS-based pressure sensors, mass air flow sensors, inertial sensors and angular rate sensors; optical MEMS sensors. 6. Applications: sensors in Electrical Engineering. Electrical and optical current sensors; power cable fault-detection methods; smart railway monitoring systems. <p>Laboratory Experiments: Testing and calibration of force sensors and on-board MEMS accelerometers.</p>

Subject Description Form

Subject Code	EE550
Subject Title	Enterprise Risk and Asset Management
Credit Value	3
Level	5
Pre-requisite/ Co-requisite/ Exclusion	Nil
Collaboration Institute	MTR Academy
Objectives	<ol style="list-style-type: none"> 1. To allow students to appreciate how enterprise risk management and asset management contribute to business sustainability of railway operation and the required organisation. 2. To provide students with basic understanding of Enterprise Risk Management in railway industry. 3. To provide students with comprehensive understanding on asset management for railways and the concept and principles of which are also applicable to other industry sectors. 4. To enable students to acquire knowledge on the key asset management processes and techniques adopted. 5. To enable students to apply international standard and practices on asset management.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Understand the key elements of asset management and ERM framework, international standards and critical success factors for system implementation. b. Appreciate the asset management and enterprise risk management techniques. c. Recognise the importance to engage in self-learning on latest industry best practices on asset management at this advanced level of study.
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> 1. Enterprise Risk Management <ul style="list-style-type: none"> • Enterprise Risk Management (ERM) framework • Risk management organisation for ERM • Risk aggregation and reporting, risk categorization and measurement, risk identification and assessment, risk control and responses, review and audit • Critical success factors for ERM • Application of ERM in typical railway system 2. Asset Management <p>Asset Management Framework</p> <ul style="list-style-type: none"> • Introduction to ISO55000:2014 • Alignment with corporate asset management direction • Asset management organizations • Asset management and business sustainability <p>Enabling Processes for Asset Management</p> <ul style="list-style-type: none"> • Establishment and measurement for levels of service • Demand forecasting and management • Risk management for asset management • Condition assessment and performance monitoring • Reliability Centred Maintenance • Asset criticality • Maintenance management planning • Asset investment and reinvestment decision making • Value engineering, life cycle costing & Internal Rate of Return • Audit and management review for asset management

	<p>Asset Management Information Systems and Data Management</p> <ul style="list-style-type: none"> • Asset management information system • Data structure and numbering • Data collection and management • Data analytics and machine learning for asset management <p>Case Study: Case studies of asset management and ERM techniques and practices Industrial/Research seminars</p>																															
<p>Teaching/Learning Methodology</p>	<p>The concept of risk and asset management, reliability analysis and system assurance analysis will be presented through lectures and tutorials with reference to real-life applications on railway and related systems. Students will be required to form groups to work through cases covering practices on the real-life cases. Guest lectures are structured on appropriate sessions for relating the theoretical concepts real-life to practices. Students are required to share, present and defense their finding on their case studies.</p> <table border="1" data-bbox="432 674 1463 904"> <thead> <tr> <th rowspan="2">Teaching/Learning Methodology</th> <th colspan="3">Outcomes</th> </tr> <tr> <th>a</th> <th>b</th> <th>c</th> </tr> </thead> <tbody> <tr> <td>Lectures</td> <td>√</td> <td>√</td> <td>√</td> </tr> <tr> <td>Case Studies</td> <td>√</td> <td>√</td> <td>√</td> </tr> <tr> <td>Discussion Forum and Presentation</td> <td>√</td> <td>√</td> <td>√</td> </tr> </tbody> </table>				Teaching/Learning Methodology	Outcomes			a	b	c	Lectures	√	√	√	Case Studies	√	√	√	Discussion Forum and Presentation	√	√	√

Subject Description Form

Subject Code	EE552
Subject Title	High Speed Rail
Credit Value	3
Level	5
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	<ol style="list-style-type: none"> 1. To provide students with a comprehensive understanding of the updated operation principles and applications of high speed rail systems from an engineering viewpoints. 2. To enable students to acquire knowledge of the state-of-the-art design of high speed trains, on-board train control systems and train detection systems to ensure safe and efficient operation of high speed rail. 3. To enable students to understand the latest design concepts of the high speed rail signaling systems (ETCS, European Train Control Systems and CTCS, China Train Control Systems) and moving block signaling concepts. 4. To enable students to acquire knowledge of the key infrastructures and engineering systems of high speed rail. 5. To enable students to appreciate the planning of a high speed rail project and the design principles of the high speed rail terminus and platforms with focus on the design considerations for passenger flow and movement.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Identify the design concepts, functions, and operation principles of a high speed rail. b. Understand the design and operation principles of high speed rolling stocks and traction control systems as well as the engineering practices in real-life applications. c. Analyze the operation principles of a high speed train control system and signaling system in terms of advantages and limitations and also formulate a simple signaling system configuration. d. Acquire a comprehensive knowledge of the key engineering systems and infrastructures of a high speed line to pave way for more advanced studies. e. Understand the key issues in the planning and design of a high-speed line, and its stations and platforms.
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> 1. Introduction: What is a high speed rail, speed/time/travel distance characteristics, line capacity and headways, high speed lines development worldwide, basic design and operation concepts, station/tunnel/bridge design considerations, international high speed rail standards, 2. High Speed Rolling Stocks: Types of rolling stocks (concentrated power/distributed power/articulated/tilting trains), train body design, key engineering components design, braking characteristics, traction curves, train resistance and aerodynamics, Davis equation, train detection and navigation systems, future rolling stocks.

3. **Traction Control:** AC drives, torque-speed characteristics, traction equations, tractive effort curves, eco-driving, traction drive controls-resistance control, chopper control and PWM control, AC-DC (thyristor phase-control bridges, pulse width modulated, PWM converter), DC-AC (insulated gate bipolar transistor, IGBT inverter), traction supply system (25 kV AC), earthing and ground return current for AC traction power supply, auxiliary power supply
4. **Signaling Systems:** Fail safe principle, route setting, movement authority, Automatic train protection system (ATP), Automatic train operation (ATO), moving block signaling (with worked calculation example), Global system for mobile communication – Railways (GSM-R), European Train Control System (ETCS) – Eurobalise, radio block centre (RBC), lineside electronic unit (LEU), Euroloop, ETCS levels 1, 2 & 3 – system architecture, ETCS operation modes, European Rail Traffic Management System (ERTMS), Driver machine interface, DMI, China Train Control System (CTCS) levels 0, 1, 2 & 3 – system architecture, RBC, CBI, train control centre (TCC), track circuits, balise, LEU, DMI, CTCS operation modes, Grade of automation, GoA (IEC 62290), future signaling
5. **Terminal and Station Design:** planning of a high speed line project, high speed rail terminus and station design, platform design, passenger flows-vertical and horizontal movements, Level of service, LoS
6. **Infrastructures:** Catenary supply systems (OHL), overhead rigid conductor (ORCR), p way, track form, track geometry and gauge, rail cant, switch and crossing, rail fasteners, rail welding, wheel-rail wear, tunneling (drill and blast, cut and cover, immersed tube, TBM), structural gauge and kinematic envelope.

Teaching/Learning Methodology

Main lectures are delivered by subject lecturer, who share his practical experience and knowledge with students through lectures and tutorials. The design, operation principles and engineering concepts of high speed rail and key systems will be discussed. The site visit to MTR XRL line is also arranged to enable students to reinforce what they have learned with the real-life applications.

Teaching/Learning Methodology	Outcomes				
	a	b	c	d	e
Lectures	√	√	√	√	√
Tutorials	√	√	√	√	√
Site Visit	√	√	√	√	

Assessment Methods in Alignment with Intended Learning Outcomes

Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed				
		a	b	c	d	e
1. Assignments/mini projects	40%	√	√	√	√	√
2. Examination	60%	√	√	√	√	√
Total	100 %					

The examination is to evaluate the students’ understanding of the design and operation principles of the high speed rail and its engineering systems. Assignments/mini projects provide the means to assess the students’ analytical skills and the knowledge learned.

Student Study Effort Expected	Class contact:	
	▪ Lectures/Tutorials	33 Hrs.
	▪ Invited lecture	3 Hrs.
	▪ Site visit	3 Hrs.
	Other student study effort:	
	▪ Assignments	10 Hrs.
	▪ Self-study	56 Hrs.
	Total student study effort	105 Hrs.

Subject Description Form

Subject Code	EE560
Subject Title	Metros in Hong Kong and China
Credit Value	3
Level	5
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	To provide students through lectures, site visits and exchanges with Metro personnel; an overview knowledge and an appreciation of Metro operations, business and projects, using systems in Hong Kong and China as illustrations.
Intended Learning Outcomes	Upon completion of the subject, students will be able to: <ul style="list-style-type: none"> a. demonstrate an understanding of the fundamentals of metro operations and management b. acquire a comprehensive knowledge of key engineering systems in metros to pave the way for more advanced studies c. appreciate the key issues in the planning and implementation of metro projects.
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> 1. <u>Introduction</u> <ol style="list-style-type: none"> a. Objectives and key attributes of Metros b. Major components of a Metro c. Role of Metros in public transport d. A survey of operating Metros in Hong Kong and China. e. Future development of Metros in Hong Kong and China. 2. <u>Key systems in Metro</u> <ol style="list-style-type: none"> a. Trains b. Trackwork and civil infrastructure c. Signalling, control and communication systems d. Power supply system e. Station facilities f. System integration and system assurance 3. <u>Metro Operation</u> <ol style="list-style-type: none"> a. Train operation b. Station operation c. Depot operation d. Asset maintenance e. Key performance indicators f. Safety and risk management 4. <u>Metro business</u> <ol style="list-style-type: none"> a. Customer services b. Non-fare business c. Fare policy and strategy 5. <u>Metro Project</u> <ol style="list-style-type: none"> a. Project planning b. Project implementation c. Funding of projects

Teaching/Learning Methodology	<p>a) Lectures – 30 hours b) Site visits c) Tutorial/Discussion with Metro personnel – 9 hours</p> <p>Core subject knowledge will be delivered in the lectures, site visits will enhance the students’ understanding on the subject contents, while tutorials and discussion with Metro personnel will give more details on the real world practices.</p> <table border="1" data-bbox="432 365 1445 568"> <thead> <tr> <th data-bbox="432 365 948 416" rowspan="2">Teaching/Learning Methodology</th> <th colspan="3" data-bbox="948 365 1445 416">Outcomes</th> </tr> <tr> <th data-bbox="948 416 1115 468">a</th> <th data-bbox="1115 416 1283 468">b</th> <th data-bbox="1283 416 1445 468">c</th> </tr> </thead> <tbody> <tr> <td data-bbox="432 468 948 519">Lectures</td> <td data-bbox="948 468 1115 519">√</td> <td data-bbox="1115 468 1283 519">√</td> <td data-bbox="1283 468 1445 519"></td> </tr> <tr> <td data-bbox="432 519 948 568">Tutorials</td> <td data-bbox="948 519 1115 568">√</td> <td data-bbox="1115 519 1283 568"></td> <td data-bbox="1283 519 1445 568">√</td> </tr> </tbody> </table>				Teaching/Learning Methodology	Outcomes			a	b	c	Lectures	√	√		Tutorials	√		√

Subject Description Form

Subject Code	EE570
Subject Title	Design and Analysis of Smart Grids
Credit Value	3
Level	5
Pre-requisite / Co-requisite/ Exclusion	Nil
Objectives	<ol style="list-style-type: none"> 1. To provide students with a comprehensive understanding on design and analysis of smart grids; 2. To ensure the students aware of the current state-of-the-art on design, operation and control of smart grid; 3. To acquire knowledge on the components in smart grids and their functions; and 4. To enable students to apply advanced analysis tools in planning and operation of smart grids.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Acquire in-depth understanding on recent development of power grids, i.e. smart grid; b. Apply advanced analysis tools in planning and operation of smart grids; and c. Acquire skills in presentation and interpretation of results in written form.
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> 1. Introduction to smart grid: Overview of power system operation; Comparison between existing grid and smart grid; Objectives; Benefits; Challenges; Basic structure and functions of components. 2. Communications and measurement: Latest technologies; Wide Area Monitoring Systems (WAMS), Phasor Measurement Units (PMU), Smart Meters, Smart Appliances, and Advanced Metering Infrastructure (AMI); GIS and Google Mapping Tools; Multiagent Systems Technology. 3. Micro-grid: Concept of micro-grid; design and analysis; distributed generation; distributed automation. 4. Renewable energy and storage: Renewable energy resources and options for smart grid including solar energy, wind energy, fuel cell, biomass etc.; Penetration and variability; Demand Response; Electric vehicles and plug-in hybrid; Battery energy storage systems. 5. Interoperability, standards and cyber security: State-of-the-art, Benefits, Challenges, Risks. 6. Analysis tools: Power/load flow studies; Static security assessment; State estimation and stability assessment; Reliability assessment; Decision support tools; Advanced optimization and control; Environmental impacts; Pathway for designing smart grid. 7. Standards and critical infrastructure protection: State-of-the-art, Benefits, Challenges, Risks.

Teaching/Learning Methodology	<p>Lectures and tutorials are the primary means of conveying the concepts and theories. Mini-projects are designed to supplement the lecturing materials so that the students are encouraged to take extra readings and the latest development of the smart grids.</p> <table border="1" data-bbox="432 248 1453 539"> <thead> <tr> <th data-bbox="432 248 951 360" rowspan="2">Teaching/Learning Methodology</th> <th colspan="3" data-bbox="951 248 1453 304">Outcome</th> </tr> <tr> <th data-bbox="951 304 1118 360">a</th> <th data-bbox="1118 304 1286 360">b</th> <th data-bbox="1286 304 1453 360">c</th> </tr> </thead> <tbody> <tr> <td data-bbox="432 360 951 427">Lectures</td> <td data-bbox="951 360 1118 427">✓</td> <td data-bbox="1118 360 1286 427">✓</td> <td data-bbox="1286 360 1453 427"></td> </tr> <tr> <td data-bbox="432 427 951 483">Tutorials</td> <td data-bbox="951 427 1118 483"></td> <td data-bbox="1118 427 1286 483">✓</td> <td data-bbox="1286 427 1453 483">✓</td> </tr> <tr> <td data-bbox="432 483 951 539">Mini-project</td> <td data-bbox="951 483 1118 539"></td> <td data-bbox="1118 483 1286 539">✓</td> <td data-bbox="1286 483 1453 539">✓</td> </tr> </tbody> </table>				Teaching/Learning Methodology	Outcome			a	b	c	Lectures	✓	✓		Tutorials		✓	✓	Mini-project		✓	✓
